Jerry,
From personal experience I can tell you that it
Would work with 10, but not 100 or 1000.

I have had no problem mixing POTS and ethernet on Cat5... I've done it all the time with Cat3 with POTS and ethernet as well... you will not get crosstalk. The POTS spec is Cat1 and the freqs that ethernet is using is undetectable for xtalk.I believe the distance limit for ethernet is 100meters or about 300ft - that includes all path cable lengths included.

But this will only work for 10baseT or 100baseT... as 1000baseT (gigabit ethernet) uses all 4 pairs.

if you're only running 10/100baseT you can use the unused pairs... which I belive are the center two pins (3/4) and left outer (7/8)... which colors, depends on which color scheme you're using.

With that said - I think that running a 2nd run is better and easier... and less confusing.

Additionally, I would isolate the pairs you're using at both ends with different jacks... in that you only use two pairs to run your 10/100baseT in the cat5 cable for ethernet... and wire separate jacks for the POTS... that way if you do happen to connect a 1000baseT device into the jack, you won't be hooking it up to the POTS pairs.

Good Luck,

-Richard, N5YOO

Also if you ever chose to run POE phones no rewiring.

Perhaps crosstalk was the wrong word when I tried it i heard a lot of noise on the phone lines.

I love my polycom phones at the office. May want to check out good-old asterisk

Noise would be x-talk...

Perhaps there was a different problem? Ethernet was designed to run over
Cat3 (10baseT) and Cat5 (100BaseT) with no issues with x-talk... the idea
was to share the same cabling plant in large buildings with phone.

In my experience it works fine - I wonder if there was a bad ground
somewhere or a short...

2005. Re: Cat 5 question?

Yahoo group: DAWG-HSMM
Date: 2011-01-19 01:07:21 UTC
From: ag5rs
Topic: 1998 Message: 2005

I would suggest a second cable. Here is why -- the lower speeds of 10 and 100 Mb/s Ethernet have a spare pair. But when you step up to either Power over Ethernet (PoE) or to 1000 Mb/s speed, that spare pair goes away.

If you want two phone lines you need two pairs for them. So even if you used the low speed free pairs then you still come up one pair short.

If you are worried about cost, you could run one Cat 5e and one Cat 3. That is what I did in the last three offices I have wired. On the Cat 3, the cost of 3 pair vs 2 pair is negligible and I recommend the 3 pair. That allows you to have a spare pair for anything. In the past I have used that spare for a third phone line for fax,an alarm loop, a doorbell, etc.

When you wire the Cat 5e, use the T568B (as in Bravo) wiring configuration. It is not terribly important these days whether you use A or B, but B is the "official" one for the use you are describing and is the most universal.

One final thought; if you are wondering "why would I ever need 1000 Mb/s speed?" here is the answer in my case. It is really nice when I wanted to put the external hard drives in a separate place. That is quieter and I can put them on an ugly old UPS I picked up cheap. It all improves the spousal approval factor.

Hope this is helpful,
Ron, AG5RS

There are 2 spare pairs in 10/100 ethernet... not one. a typical Cat5
bundle has 4 pairs... blue, green, orange, brown. 10/100 ethernet
only require two pairs.

http://en.wikipedia.org/wiki/Ethernet_over_twisted_pair

> If you want two phone lines you need two pairs for them. So even if you used the low speed free pairs then you still come up one pair short.

This is incorrect - You can run two phone lines, in one 4-pair cat5
bundle. 2-pairs for ethernet, one pair each for phone lines

For both 568A and 568B, green/green-white and orange/orange-white are used by Ethernet and Fast Ethernet; blue/blue-white and brown/brown-white are used only for power over Ethernet. Gigabit Ethernet uses all four pairs. Piggybacking can cause problems, especially when the telephone rings: the 90V AC pulse that is sent to cause the phone to ring can induce enough voltage in the data pairs to temporarily disrupt the connection.

I don't recommend doing this because it limits you to Fast Ethernet without POE, which will really bite you in the ass when you decide to get a VOIP system with POE phones (virtually all VOIP systems use POE phones) down the road. Cat5 is what, 4 cents a foot? The cost of not buying a second spool of Cat5 isn't worth the hassle down the road when you discover that your frugality has limited your options too much.

Or maybe there were split pairs. the twisting of the pairs together is to help address the noise issues you need to make sure you are using a pair of conductors that are twisted together.

2009. Re: [ntms-hsmm] Cat 5 question?

Yahoo group: DAWG-HSMM
Date: 2011-01-19 06:25:41 UTC
From: kevin asato
Topic: 1998 Message: 2009

Noise can also be Near End Cross Talk from the Ethernet transmit side at the NIC overloading the receive side, not just what is introduced from the surrounding environment. This can be controlled when crimping connectors or punching down on blocks by unwrapping as little of the twists as possible to maintain the balance in the pair. In addition to common mode noise rejection, the twists in the ethernet wiring contribute to the characteristic (transmission) line impedance which also contributes to the distance (100 meters) that the signal can be driven.
Twisted pair wiring is for common mode noise rejection. This is what is also what is used in (non musical) instrument wiring, communications circuits as RS-422/485 and synchronous serial (RS-449, RS-530, V.35), and low impedance microphone circuits for public address and music applications.
I have successfully mixed POTS and 10/100 Ethernet on the same 4-pair cable to no detriment using the blue and brown pairs. The only disadvantage is that it will not allow expansion capabilities to 1G Ethernet.

Greetings!

Based upon my experience years ago in an interconnect company,
the only thought I'd like to share is... WIRE IS CHEAP!

When you have the walls open is THE time to run wire... and plenty of it!

No one ever said that you had to terminate ALL the cable pairs that
you run in a building. You can just leave them in the walls "lurking"
for a day when the might be used.

The last new construction building I did was a physical therapy complex
for a doctor. The designer was not sure where they wanted to place the
various items of furniture and equipment in each room. The phone system
used three (3) pair wire. We ran two (2) six pair drops on each wall in
every room. These were all terminated at a block in an equipment closet
where they were cross-connected to the incoming lines to make the
various extensions active. This proved to be a really good strategy as
they were constantly re-arranging the room layouts. This forethought
cost about $50 in wire and just a few hours labor. We didn't end up saving
the doc big bucks, however, in the end. The lady who managed the building
decided that she wanted her desk in the center of a room, with the phone
drop in the concrete floor, despite the fact that she was surrounded by
eight (8) wall drops. Yup, move the carpet, bust the concert, we can do
it... for about $1,000!

If you want to have a network drop in a particular location, run TWO cables.
For phone, you might consider running at least one or two more... or if
you're planning on staying with POTS for a while, but are uncertain as to
what your needs are, you might consider running a multi-pair cable to
each location, like maybe a six-pair or twelve-pair.

Remember, it's really easy to wire a building while the walls are still open.
Take advantage of this and run everything you can think of at that time.

For the last few networking jobs I did, my recommendation was to run
three (3) CAT-5 cables to each proposed network access location. This
turned out to be really beneficial when the customer relocated equipment.
In the meantime, the "dead" wire was just lying in the walls waiting to be
used. All we had to do was terminate the end with an RJ-45, connect it
to the switch, then connect the remote end to the RJ-45 jack in the wall.

73,

Pat ND5C

I'm with Pat on this. When my department moved into a new space, I had four Cat5 drops put at each operating position. That decision paid off several times. The cost of running four cables is barely more than that of running one. Almost all of your cost is labor anyway and most of the effort in any cable run is in routing the run; once that's done pulling multiple cables is barely any more than the cost as pulling one.

Also, whatever you do, use punchdown blocks. Don't do like so many places I've seen have done and have cables terminated with RJ-45s hanging out of walls. RJ-45 plugs break fairly easily, and if you do this you'll end up, eventually, with a cable that's too short to reach, requiring a splice connector or some other insanity, because you've had to repeatedly cut off broken plugs and reterminate the cable. RJ-45 plugs have relatively limited insertion lifecycles (the plastic tang that holds them breaks fairly easily), but RJ-45 jacks are quite robust and will last a very long time if not abused. So please please please punch down all cable terminations into a distribution panel or other punchdown termination (even if it's just an RJ-45 biscuit), and use an easily-replaced patch cable for the last bit of the connection.

Kelly,

Thank you for clarifying my point about using the 66 blocks!

One other point (pretty much in keeping with my original "wire is cheap" point, however)....

Insist that there be at least a full foot (or two) of wire extending out the hole in the wall.

I've seen more phone guys fight with trying to attach a connect block while working jammed up against the wall because the guy who put it in decided to save $0.03 worth of wire. A foot or two of wire protruding from the wall makes it very easy to make connections and is easy to just stuff back in the wall. Also, should you decide you'd like to move the jack just a bit one way or another, it can make things much, much easier.

73,

Pat ND5C

I'm with Pat on this. When my department moved into a new space, I had four Cat5 drops put at each operating position. That decision paid off several times. The cost of running four cables is barely more than that of running one. Almost all of your cost is labor anyway and most of the effort in any cable run is in routing the run; once that's done pulling multiple cables is barely any more than the cost as pulling one.

Also, whatever you do, use punchdown blocks. Don't do like so many places I've seen have done and have cables terminated with RJ-45s hanging out of walls. RJ-45 plugs break fairly easily, and if you do this you'll end up, eventually, with a cable that's too short to reach, requiring a splice connector or some other insanity, because you've had to repeatedly cut off broken plugs and reterminate the cable. RJ-45 plugs have relatively limited insertion lifecycles (the plastic tang that holds them breaks fairly easily), but RJ-45 jacks are quite robust and will last a very long time if not abused. So please please please punch down all cable terminations into a distribution panel or other punchdown termination (even if it's just an RJ-45 biscuit), and use an easily-replaced patch cable for the last bit of the connection.

Kelly

Based upon my experience years ago in an interconnect company,
the only thought I'd like to share is... WIRE IS CHEAP!

When you have the walls open is THE time to run wire... and plenty of it!

No one ever said that you had to terminate ALL the cable pairs that
you run in a building. You can just leave them in the walls "lurking"
for a day when the might be used.

The last new construction building I did was a physical therapy complex
for a doctor. The designer was not sure where they wanted to place the
various items of furniture and equipment in each room. The phone system
used three (3) pair wire. We ran two (2) six pair drops on each wall in
every room. These were all terminated at a block in an equipment closet
where they were cross-connected to the incoming lines to make the
various extensions active. This proved to be a really good strategy as
they were constantly re-arranging the room layouts. This forethought
cost about $50 in wire and just a few hours labor. We didn't end up saving
the doc big bucks, however, in the end. The lady who managed the building
decided that she wanted her desk in the center of a room, with the phone
drop in the concrete floor, despite the fact that she was surrounded by
eight (8) wall drops. Yup, move the carpet, bust the concert, we can do
it... for about $1,000!

If you want to have a network drop in a particular location, run TWO cables.
For phone, you might consider running at least one or two more... or if
you're planning on staying with POTS for a while, but are uncertain as to
what your needs are, you might consider running a multi-pair cable to
each location, like maybe a six-pair or twelve-pair.

Remember, it's really easy to wire a building while the walls are still open.
Take advantage of this and run everything you can think of at that time.

For the last few networking jobs I did, my recommendation was to run
three (3) CAT-5 cables to each proposed network access location. This
turned out to be really beneficial when the customer relocated equipment.
In the meantime, the "dead" wire was just lying in the walls waiting to be
used. All we had to do was terminate the end with an RJ-45, connect it
to the switch, then connect the remote end to the RJ-45 jack in the wall.

I'd also vote for running two bundles.

1-To keep your options open for gigabit ethernet, power over ethernet, and spare pairs AND a future third phone line (never say never)

2-Because you know at some point, someone is going to come in to fix or move something on the phone or network, and when Mr. Murphy finds all those extra wires...the odds of bringing it all crashing down get much better when you've done "unconventional" wiring. Also, if someone has to mess with the phones, or the computers, they just disrupt one system--not both.

Subject: Doodle Labs releases sub-GHz broadband radio modules

<http://www.ten21group.com/uploads/6/0/7/1/6071975/6309981.png>

Doodle Labs announces

Nexus Prism: OFDM Broadband Radio platform for sub-GHz bands

January 19, 2011

Singapore - Doodle Labs announces the launch of its Nexus Prism platform of high performance, embedded broadband radio modules that collectively span

the 335 MHz to 960 MHz range. The Nexus Prism is a software-programmed frequency-translation technology that enables OEMs access to licensed Industrial, Military, and TV White Space spectrums.

<http://doodlelabs.com/images/stories/DL_images/prod_minipci_hp.jpg>
Ashish Parikh, VP of Business Development in North America, commented, "With the launch of the Nexus Prism platform, Doodle Labs has a broadband radio module offering at nearly every frequency from sub-GHz up to 6 GHz. OEMs operating in licensed band spectrums now have a higher performing broadband solution than what is currently out in the market. Furthermore, we're excited to be first-movers to address the TV White Space spectrum opening up."

Doodle Labs radios are designed to deliver high performance in long-range outdoor applications. Nexus Prism modules feature advanced filtering techniques that lead to the industry's highest in-band interference immunity. In addition, the modules deliver up to 1000 mW (30 dBm) transmit power, which allows for greater distance and throughput than the closest competitors. High receive sensitivity enables improved range in obstacle-rich environments and offers near line of sight capability.

Mr. Parikh added, "The Nexus Prism platform of cards is particularly well suited for OEMs engaging in the defense and industrial spaces." The 20 Mbps TCP/IP actual data throughput combined with the high transmit power enable a new set of video surveillance and manpack devices operating at distances up to 20-25 miles. In addition, the Industrial/MIL-spec design (-40C ~ +85C) and enhanced resilience to RF surges and ESD make the radio ideal for deployment in harsh environments.

2016. Request for Coax Connector Crimping Tool Opinions and/or Recommendations

Yahoo group: DAWG-HSMM
Date: 2011-01-19 03:57:03 UTC
From: Patrick Soileau ND5C
Topic: 2016 Message: 2016

Greetings!

I'd like to pursue obtaining the tools needed to crimp coax connectors (BNC, PL-259, SMA) on the most common types and sizes of coaxial cable (RG-58, RG-59, RG-6, RG-8, RG-174).

Looking through the various catalog available online has left me a bit dazed and confused as to which route to go... a single tool with interchangeable dies or multiple (2,3,4) tools each covering maybe 2-3 cable sizes/types and/or connector types.

Does anyone have any suggestions, recommendations, and/or opinions that they would care to share?

This is strictly for amateur radio use, so there is no real need for an extremely heavy duty tool as would be needed by a a two-way radio technician in daily usage.

Please be sure to copy Pat@... on your response.

Thanks!

73,

Pat ND5C

I recommend the Eclipse 500-001 Coax Crimping Kit. Its about $90, bit has everything I have ever needed.

Google it, a lot of different places sell it now-days, there may even be other generic knockoffs.

Pat-
If you just crimp occassionally, one tool with different dies is fine. If you need to change dies more than "once in a while", i.e. several times on the same job, then having separate tools will mean less nuisance work and lost time.
More important is getting a good tool, they are not all created equal and some of the junk from China won't make proper crimps.
I've never regretted the money I spent on my first good ratcheting crimper, never had a crimp failure since.

From: Jerry K
Topic: 2020 Message: 2020

Hey Gang,
I know this ain't high speed wifi stuff but there will be some of that wifi in this installation too ;) .

I'm trying to figure out the correct color wire to pin number code for a typical ethernet cable RJ-45. I believe the 568A standard seems to be the perfered, according to some web sites I've read. However, I have 2 store bought patch cables and neither one of them are the same color pin out and neither are 568A. No, one is not a cross-over either. I understand as long as the same wires are connected to the same pins on both ends of the cable all should be well. But what about some where in time I need to re-crimp a RJ-45 to a cable? I like the 568A standard because it's easy to identify a 2 line telephone RJ-14 to it. No. I've decided to run seperate cable for data and voice so I'm not piggy-back'n the two. This is going to be for my own home office and I have a couple of computers and a couple of network printers along with a two line telephone system. TNX es 73 de Jerry KD5OM

In my experience, T568B (not T568A) is the standard pinout for a straight-through (not crossover) Ethernet cable. A crossover cable will be wired T586A at one end and T586B at the other. (I've seen some people assert that T568A is the standard, but in my seven years of experience as a network engineer I can assert that virtually everything uses T568B. T568A is mainly found on telephony gear.)

It is very important that the pairings be maintained in the cable. If you split pairs or use unpaired cable, you will have serious performance issues; Ethernet performance is pretty dependent on having a nominal 600 ohm impedance in each pair, and if you split pairs not only will that be lost but you will also get crosstalk and your cable will probably also radiate. The pairs in an T568B-wired Ethernet cable are 1&2 (orange), 3&6 (green), 4&5 (blue), and 7&8 (brown). T568A swaps green and orange. Even pins get solid colors, odd get white-stripe. You can alter the colors if you really must, but do not alter the pairings or your cable will not work well.

2022. Re: another ethernet cable Q

Yahoo group: DAWG-HSMM
Date: 2011-01-24 22:29:49 UTC
From: Jerry K
Topic: 2020 Message: 2022

tnx kelly,

I can go with T568A for voice telephone. I like pins;
Pair One;
4: blue
5: white/blue
Pair Two;
3: white/orange
6: orange

This is easy for me to remember when doing my telephone lines. These are the four wires used in a RJ-14.

I just pulled another store bought patch cable from the shelf and it's wired:

1: white/orange
2: orange
3: white/blue
4: blue
5: white/green
6: green
7: white/brown
8: brown

This is this scheme? We've been using these for years here at work with our store bought cables. What standard do you call this? Standard? All this confusion makes that an oxymoron?

I really do appreciate your indulgence.

From: ae5ca
Topic: 2020 Message: 2023

Are you sure about the pinout of the store cable?

The 568B which seems to be more popular has

1: WH/OR
2: OR
3: WH/GR
4: BL
5: WH/BL
6: GN
7: WH/BR
8: BR

As was previously mentioned, you need to keep your pairs together

The Pairs are

1 & 2
3 & 6
4 & 5
7 & 8

As long as you are consistant and keep your pairs together, the particular color used is not that important.

A reference for the color codes is at:
http://www.incentre.net/content/view/75/2/

A typical 10/100 cable is using 1 & 2, and 3 & 6.

A Gb Cable uses all four pairs.

POE is normally done on 4 & 5 and 7 & 8.

tnx kelly,

I can go with T568A for voice telephone. I like pins;
Pair One;
4: blue
5: white/blue
Pair Two;
3: white/orange
6: orange

This is easy for me to remember when doing my telephone lines. These are the four wires used in a RJ-14.

I just pulled another store bought patch cable from the shelf and it's wired:

1: white/orange
2: orange
3: white/blue
4: blue
5: white/green
6: green
7: white/brown
8: brown

This is this scheme? We've been using these for years here at work with our store bought cables. What standard do you call this? Standard? All this confusion makes that an oxymoron?

I really do appreciate your indulgence.

From: Jerry K
Topic: 2020 Message: 2025

I'm dead certain about the store bought cables. I guess this is what makes this so confusing. The people making up those patch cables aren't sticking to the T568a or the T568b schemes. Since I have 2 votes for the T568b I think I'll go with that for my 10-base-100 ethernet and T568a for my voice lines. If you examine a RJ-14 (2 line telephone jack), line one is the two wires in the center (same as a RJ-11 one line telephone) then line two is the next outer pair. This seems to work with the T568a scheme. But, as far as my ethernet is concern, I want to be ready to upgrade to a faster network and not have to re-wire everything. No need for anything faster than 100 right now.

Check this link out.
http://en.wikipedia.org/wiki/Category_5_cable

Quote
"The cable is terminated in either the T568A scheme or the T568B scheme. Canada and Australia use the T568A standard, and the United States commonly uses T568B scheme. It really doesn't make any difference which is used as long as you use only one of the standards so all connections are the same at your location to avoid confusion and potential problems. Mixed cable types should not be connected in series as the impedance per pair differs slightly and may cause signal degradation. The article Ethernet over twisted pair (http://en.wikipedia.org/wiki/Ethernet_over_twisted_pair) describes how the cable is used for Ethernet, including special "cross over" cables (http://en.wikipedia.org/wiki/Ethernet_crossover_cable)."

In my experience, T568B (not T568A) is the standard pinout for a straight-through (not crossover) Ethernet cable. A crossover cable will be wired T586A at one end and T586B at the other. (I've seen some people assert that T568A is the standard, but in my seven years of experience as a network engineer I can assert that virtually everything uses T568B. T568A is mainly found on telephony gear.)

It is very important that the pairings be maintained in the cable. If you split pairs or use unpaired cable, you will have serious performance issues; Ethernet performance is pretty dependent on having a nominal 600 ohm impedance in each pair, and if you split pairs not only will that be lost but you will also get crosstalk and your cable will probably also radiate. The pairs in an T568B-wired Ethernet cable are 1&2 (orange), 3&6 (green), 4&5 (blue), and 7&8 (brown). T568A swaps green and orange. Even pins get solid colors, odd get white-stripe. You can alter the colors if you really must, but do not alter the pairings or your cable will not work well.

I can verify that a non-T568a/b cable will NOT pass a CAT5/E or CAT6/E test! It could be that the store bought unit may not have any twisted pairs in it, or the pairs are twisted differently than by own colors??? Maybe it's short enough it doesn't matter??? You can wire a CAT5 cable W/B W/O W/G W/Bn and it may work, but will be VERY slow!! If it is of any decent length, it will just sit there and green up the lights, but very little data will pass.
We had contractors going around making cables up and they did several just as above. Everything would green up, but It wouldn't even pass the initial pair test using a cable tester. After I wired as the 568B pinout shown below from Jerry, it passed better than CAT6 quality from standard CAT5E cable.

No doubt about it. It's settled. I plan on wacking off the connectors and recriping everything as per the T568B method. Analog telephone lines will be T568A so the two phone line pairs will match up. Thank you everybody for all of the input. I have two rolls of CAT5e. One with an orange sheath and one with a blue sheath. The orange will be telephone and the blue will be data. Jerry KD5OM

> I can verify that a non-T568a/b cable will NOT pass a CAT5/E or CAT6/E test! It could be that the store bought unit may not have any twisted pairs in it, or the pairs are twisted differently than by own colors??? Maybe it's short enough it doesn't matter??? You can wire a CAT5 cable W/B W/O W/G W/Bn and it may work, but will be VERY slow!! If it is of any decent length, it will just sit there and green up the lights, but very little data will pass.
> We had contractors going around making cables up and they did several just as above. Everything would green up, but It wouldn't even pass the initial pair test using a cable tester. After I wired as the 568B pinout shown below from Jerry, it passed better than CAT6 quality from standard CAT5E cable.

> I'm dead certain about the store bought cables. I guess this is what makes this so confusing. The people making up those patch cables aren't sticking to the T568a or the T568b schemes. Since I have 2 votes for the T568b I think I'll go with that for my 10-base-100 ethernet and T568a for my voice lines. If you examine a RJ-14 (2 line telephone jack), line one is the two wires in the center (same as a RJ-11 one line telephone) then line two is the next outer pair. This seems to work with the T568a scheme. But, as far as my ethernet is concern, I want to be ready to upgrade to a faster network and not have to re-wire everything. No need for anything faster than 100 right now.

2030. Re: [ntms-hsmm] Re: another ethernet cable Q

Yahoo group: DAWG-HSMM
Date: 2011-01-26 01:36:26 UTC
From: Kelly Martin-AB9RF
Topic: 2020 Message: 2030

In some cables it can be very hard to tell green/white from blue/white. I had a spool of cable in which those two colors were almost entirely indistinguishable (which made me really really hate that spool). Could this be the case on your store bought cables?

The advantage of T568A is that it's consistent with the 25-pair sequence used almost universally by telephone peeps. StarLAN was designed to coexist with a POTS line, which is why it uses pairs 2 and 3, although why it used RJ-45 and not RJ-25 is a mystery to me. In any case, we've moved way past StarLAN by now, and for whatever random reason everyone uses T568B for data networking anyway.

2031. Fw: Attempted Changes to the new Lucas Tower/Antenna Ordinance

Yahoo group: DAWG-HSMM
Date: 2011-02-08 15:44:44 UTC
From: Patrick Soileau ND5C
Topic: 2031 Message: 2031

From: Larry Essary <larry@...>
Subject: Attempted Changes to the new Lucas Tower/Antenna Ordinance
To:
Date: Tuesday, February 8, 2011, 12:32 AM

Fellow Amateur Radio brothers and sisters...

The Politicos in Lucas, Texas are once again trying to minimize the rights of amateur radio operators.

The latest move is an attempt to change the Tower/Antenna ordinance by deleting the exemption to vertical antennas 35 feet and under.
By doing so... not only would you be required to pay a $150 permit fee (for 3 inspections - which makes no sense) for your vertical antenna...
you would also find that your vertical would count as a tower against your limit of two towers.

If the Politicos are successful in changing the ordinance you would have to decide if you are willing to give up a tower for that vertical.
If you wanted a pair of phased verticals then you would be done and you could forget about putting up ANY sort of a tower.

All of this started from one citizen complaint and a mayor (who has now resigned) who pulled the trigger on this mess.
It is the former mayor that wanted the vertical antenna exemption removed from the newly passed Tower/Antenna ordinance.
And this same former mayor stated in a recent council meeting that he had just acquired his ham license on the Internet.

With someone still fanning the flames of unrest there will be a small group of Lucas citizens making their emotional and often error-filled statements.
The hams in Lucas need your calm, sane, and educated voice to present facts. Remember that what one city does has ripple effects into other cities.

I ask all that can to please attend the Lucas P&Z meeting on this Thursday, February 10, at 7PM, and inject YOUR voice into the process.
The last round of this will be at the city council meeting on Thursday, February 17, at 7 PM.
The city hall is located at 665 Country Club which is midway between Lucas Road (Bethany) and Estates Parkway (McDermott).

Have you come across any other lower cost products for medium resoloution video over WIFI? I need to get video about 500 feet away without having a PC at the receiving end.

Many IP cams have SMA or other types of antenna connectors on them. You can connect a directional antenna to that and if you have good line of sight connectivity to your WAP, it should work.

Yes, IP cams can do that but you must have software running in a computer to convert the IP back to a video signal for display on a monitor.

If no computer is really a constraint, what you may be looking for is one of those 2.4 Ghz Part 15 wireless video cams. They transmit not IP but analog AM or FM modulated video. Unfortunately they are in the same frequency range as 802.11b so they are just noise to 802.11b. They put out composite NTSC video or Channel 3 or 4 for viewing on a TV.

There are many commercial wireless cams out there. Just look for ones which will allow you to change antennas. Then select an antenna which will provide the gain to make the link.

There used to be a 2.4 Ghz 100 watt amateur television repeater on a downtown building which was viewable over the whole metroplex. I don't think it's there anymore.

Date: 2011-02-22 05:49:03 UTC
From: kb9mwr
Topic: 2036 Message: 2036

From: Bruce Perens <bruce at perens.com>
To: <cq at lists.noisebridge.net>
Subject: mesh networking and codec2 talks at Hamvention 2011

TAPR will be bringing David Rowe to Hamvention from Australia. He will speak about Codec2 at the TAPR forum, and then at the TAPR/AMSAT dinner he will do a talk on his mesh networking project, the Dili Village Telco. A lot of this talk will cover why getting mesh networking working well has been much harder than expected.

2037. Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2011-02-24 23:02:37 UTC
From: Kipton Moravec
Topic: 2037 Message: 2037

Digital Tuesday is a special interest group that is interested in HSMM-MESH, Winlink, and APRS. While we will be affiliated with the Plano Amateur Radio Klub, you do not have to be a member of PARK to participate in Digital Tuesdays.

Since this is the first meeting, we will discuss how we want to go forward, and how often we want to meet. The options we are looking at for how often are once per month on the first or third Tuesday, twice per month on the first and third Tuesday, or one Tuesday and also meet at the monthly "PARK at the park".

Rusty AE5AE is going to talk about the configuration files in the HSMM-MESH software, and how you can customize them in ways that is not possible from the menu system.

You can bring your HSMM-MESH router and follow Rusty in editing the files, or we can help load the latest HSMM-MESH software into the router.

I also want to have a "show and tell" session, so bring what you are working on in the HSMM-MESH, Winlink, or APRS areas.

I envision the meetings as a way for the group to get up to speed in different areas of digital communications quicker. I would like to have mini-briefings (5-10 minute) each time on different areas by the members. One member decides he wants to figure out one problem, and then shares it at the next meeting in a little briefing.

So the first one will be at 7:00 p.m. March 1, 2011, at 299 Connor Lane, Lucas Texas 75002. Follow the driveway to the backyard gate, and there is a pool house in the back yard. That is where we will meet.

From: Rusty Haddock
Topic: 2037 Message: 2041

Folks,

I just created a 'DigitalTuesday' folder in the files section. The DT folks can put their files in there.

I have also put in there the slides from my talk at the Jan '11 webinar. This is about how to install the HSMM-MESH firmware onto a WRT54 that's running the LinkSys firmware. These slides are in PDF format and slightly modified from the originals to clarify/fill-in a few points.

The next Digital Tuesday meeting will be in two-weeks on March 15th, same Bat-Time, same Bat-Place.

This week's adventures got into doing HSMM-MESH firmware installations instead of my talk on non-GUI configuration, examining the mesh we built last night, projects to work on especially for HamCom, and other little tid bits.

We were glad to see the folks that drove over from Ft Worth and hear about what they've got going on. Hope y'all can make it to more of our meetings!

See y'all on the 15th!

2042. subversion repo

Yahoo group: DAWG-HSMM
Date: 2011-03-04 05:26:56 UTC
From: Dan Zubey
Topic: 2042 Message: 2042

Hi.

I've requested access to the subversion repo via the website, I'm wondering if that was really what I was supposed to do, or should I hit up someone else as well?

I'm working on a custom distro for the Phoenix area, just wanted to see what has been done.

Thanks,

-Dan N7NMD

Hi Kip

Well, it's not really an issue of that I have a list of 'bad' things
that need 'fixing', it's more of that I'm a ham and I need to open it
and break the warranty ;)

One of my main goals is to get the software working on 2M flash routers.
I know everyone says it can't be done. But if I can accomplish that the
available routers for our project at least doubles. Otherwise I'm
looking at replacing flash chips, or adding MMC cards, or some other hack.

Now, I've been able to get the dd-wrt micro olsrd version somewhat
working with the ntms image, but I'd like to look at the source on the
ntms image, to make sure I get everything right.

Better use of effort would be to get it working on other than Broadcom chips.

I know Rusty is working on it. For one chip that is used on cheaper routers.

I have not gotten into it to see how far they are from the 2M limit. But if it was possible, I would have thought they would have done it by now.

Contact David AD5OO to get access to the SVN. He is around the Austin_HSMM_Development@yahoogroups.com email list.

Actually, the Atheros chip set is truly a better chipset than the
Broadcom and it's functionality isn't hidden like that of Broadcom.
It just so happens to be used in some cheaper routers but definitely
not always in the cheaper routers. Still, there's still a fairly
good supply of them around here.

>I have not gotten into it to see how far they are from the 2M limit. But
>if it was possible, I would have thought they would have done it by
>now.

Not quite true but we'd give up ALL of the flexibility with the much
smaller memory. The kernel alone is over 2M and the root filesystem,
which gets stashed into Flash memory, is almost twice that as well.
Getting down that small certainly limits your feature set and absolutely
kills the ability to load new packages (additional functionality) on
the fly.

To my knowledge, no one in the Austin development group is even THINKING
about trying to get the HSMM-MESH firmware to load on to those little itty
bitty 2Meg machines. The olsrd libraries are almost 250K alone and the
wireless kernel module is over 800k bytes. You've got a long ways to go
and, IMHO, is not worth the effort. Oh yeah, many of the scripts used on
the system are written in Perl. The MICRO-Perl interpreter is over 1Meg.

I know what kind of effort it takes to shrink a Linux kernel down and,
trust me, no one around here has got THAT much spare time nor is paid
enough to do that! We could really use your efforts towards porting to
new hardware.

>> Well, it's not really an issue of that I have a list of 'bad' things
>> that need 'fixing', it's more of that I'm a ham and I need to open it
>> and break the warranty ;)

Yer breaking the warranty by just loading the HSMM-MESH firmware. :-)

>> One of my main goals is to get the software working on 2M flash routers.
>> I know everyone says it can't be done. But if I can accomplish that the
>> available routers for our project at least doubles. Otherwise I'm
>> looking at replacing flash chips, or adding MMC cards, or some other hack.

And you're sure that the CPU's in those smaller models can actually address that much memory if you can simply swap the chips???

Besides, just a simple hardware modification like that slide band mod gets expensive real fast. Do you really think that replacing flash chips or whatever is something that Joe Ham can be doing? And those new flash chips, even if they work will probably cost more than what we're paying for one of these WRT54G's.

>> Now, I've been able to get the dd-wrt micro olsrd version somewhat
>> working with the ntms image, but I'd like to look at the source on the
>> ntms image, to make sure I get everything right.

As far as I can tell the kernel sources really haven't been modified so just look at the OpenWRT v7.09 source code as well as the latest olsrd sources (version 0.6.0, I believe).

Just sumpin' to think about!

2047. [DAWG-HSMM] ntms-hsmm group name/addresses have changed

Yahoo group: DAWG-HSMM
Date: 2011-03-10 20:53:35 UTC
From: notify@yahoogroups.com
Topic: 2047 Message: 2047

Hello,

The moderator of the ntms-hsmm group has changed the group's name.
This means that both the group's email address and the group home page
location have changed.

The group email address:
DAWG-HSMM@yahoogroups.com

The group home page location:
http://groups.yahoo.com/group/DAWG-HSMM

If you have links which point to this group or an address book entry
for the group, you should update them, as the old addresses will no
longer work.

Regards,

Yahoo! Groups Customer Care

I remember it being discussed and I remember you were there. :) We talked about it at Digital Tuesday. The change was made at the suggestion of the moderator, because the HSMM stuff is not part of the North Texas Microwave Society, and has not been for many years.

The name Dallas Area Working Group (DAWG) - HSMM is what the moderator came up with. The name is not a big deal to me, but I understand that we do not want people to think this is part of the NTMS when it is not.

I probably would have announced it first, but the moderator on these lists is omnipotent and can do what he wants. And I don't have a problem with that, it is just how it works. This list has not been getting a whole lot of traffic -- 6 before your comment in March and about 11 in the month of February.

I have a big question to any and/or all of you. The Tom Green Co. ARES group is working on its own HSMM-MESH system for mainly emergency use from and/or to the EOC and the weather service, but will also use it for other things.

The question we have is: Does the routers have to have different numbers to each of them to make the system work or what?

We have been to the main web site and looked at and download everything we could possible think of using and all of the information we could come up with on the system, but we are at the point that we what to make sure we are doing it right.

Any help on this will be grateful.

73, de

Probably, but I didn't remember it. Still, said discussion didn't
happen on the mailing list here, just in person at the DT gathering.

I'm not complaining about the name, just the omnipotence of our moderator.
Although it does make us sound like a bunch of Georgia Tech. grad.

We are, for the most part, amateur radio operators here -- trained
communicators. It seems rather... neglectful that this wasn't
COMMUNICATED in a more people friendly fashion. That's all.

What numbers are you talking about? If you're talking about the IP address (e.g. 10.205.133.43) then the firmware will select an IP address based upon the MAC address of the hardware. This will be the IP address for wifi side but is not guaranteed to be perfect. If two routers with the last three numbers of their MAC addresses match then you'll have to manually change one of them on the Setup page.

>We have been to the main web site and looked at and download
>everything we could possible think of using and all of the information
>we could come up with on the system, but we are at the point that

If you follow the instructions and download the firmware, set a password, and a node Id that's unique then you'll be doing everything right.

>Any help on this will be grateful.

Does this help, Mike?

The OLSR program will not break if there are two nodes with the same IP address if they are a number of hops away from each other. It will always go to the one with the fewest hops. Not sure what happens if both are the same number of hops. It may work with one for awhile and go back to the other one. Its results may be unpredictable.

I'm confused by the "not part of NTMS" comment. There is definitely a portion of the http://www.ntms.org/ website devoted to 802.11/HSMM. I personally am interested in "all" the efforts across the region including those in Collin county. This is especially true if we should ever get to the point of having a interconnected regional system.

2057. Digital Tuesday

This week we want to try sharing files across computers on the net.

Bring your computer and a Mesh Node, so you can participate.

Also Bring anything HSMM-MESH, APRS or Winlink that you want to show for Show and Tell.

We have scheduled a UI-View Workshop on April 9.

I will also open up at 6:30 p.m. for anyone having trouble installing the HSMM-MESH software on your router. I will have the latest version of software on my computer this time.

So the second Digital Tuesday will be at 7:00 p.m. March 15, 2011, at 299 Connor Lane, Lucas Texas 75002. Follow the driveway to the backyard gate, and there is a pool house in the back yard. That is where we will meet.

If you want to try it on your own, David Rivenburg, AD5OO, wrote some
great instructions for doing your own install. They can be found here:

http://www.hsmm-mesh.org/documentation/68-firmware-installation-instructions.html

2059. New machine question...?

Yahoo group: DAWG-HSMM
Date: 2011-03-16 17:57:49 UTC
From: Jerry K
Topic: 2059 Message: 2059

Hey Guys,

I have a Q for you high-tech wiss-kids.

My work station here is quite old. I need to upgrade hardware. However, I don't want to do a whole new hard drive format and reinstall software. Besides, some of my software was purchased via download or I have used up all my available installs, such as MS Office, etc...

So.... Is it possible to connect my old ATA hard drive somehow to a machine and move everything to a new SATA hard drive and my new machine upgrade is somewhat transparent? Or, bite the bullet and start from scratch? My old machine is XP Pro SP3.

tnx es 73 de Jerry KD5OM

Yep, I just did it. I ran out of hard drive space on a old 60GB IDE drive and had the local computer shop ghost it to a new 500GB SATA drive. When I booted the system, it was like nothing had happen except now I had over 400GB of free space.

I bought my main system back in 2001. Sinse then I have upgraded the power supply, motherboard, memory, processor, and now hard drive. The only item that is orginal is the case, LOL.

somewhat easy fix:
find yourself a usb to sata drive adapter toy (newegg see below)
download xxclone http://www.xxclone.com/ or buy norton ghost
attach sat drive via usb toy to old computer
xxclone entire drive to new sata drive. new drive should be bootable,
but with xpro and all old files intact. Bad= killed whatever was on the
new sata drive including OS. Drivers for new hardware will not exist
when you boot the new drive in the new computer, so you get to play
fetch to fix those issues.

VANTEC CB-ISATAU2 SATA/IDE to USB 2.0 Adapter
<http://www.newegg.com/Product/Product.aspx?Item=N82E16812232002&cm_re=vantec_sata_to_usb-_-12-232-002-_-Product>

2062. PARK at the Park -- This Sunday, Mar 20th

Yahoo group: DAWG-HSMM
Date: 2011-03-18 22:39:01 UTC
From: Rusty Haddock
Topic: 2062 Message: 2062

If you'd care to join us, Kip and I are planning to be in the Park, Russell Creek Park, this Sunday afternoon from about 1 to 5pm. This is part of the Plano ARK's "PARK at the Park" activity. Kip and I will have our routers, laptops, and whatnot there to tinker with. Since the weather is supposed to be nice this would be a GREAT time to get out of the shack, off the LazyBoy, and out into the fresh air and still "play radio". This park is fairly large so you can get a good idea as to how far your "plano" router (even if you're from Mesquite :-) will go and probably play with antennas to boost that.

I will also have some Belkin Batteries (12v UPS's) whose output plug matches the 12-Volt input on the WRT54G (except for version 1.0). So, if you didn't get one at Digital Tuesday you can get one Sunday afternoon.

Come join us! Have some fun!

2063. Digital Tuesday -- April 5th

Yahoo group: DAWG-HSMM
Date: 2011-04-04 20:08:50 UTC
From: Rusty Haddock
Topic: 2063 Message: 2063

Two demos on the agenda for Tuesday night:

1. Attaching an IP camera to your mesh node.
2. Wireless access to your mesh by adding an access point, back-to-back, to a mesh node.

Bring your computer and a mesh node so you can participate. Also bring anything HSMM-MESH, APRS or Winlink that you want to show for Show and Tell.

Meeting is at 7:00pm. Location is 299 Connor Ln, Lucas, TX (33.076433N, 96.573173W). Follow the driveway to the backyard gate, go around the pool to the pool house. Our meeting is in there.

Connor Ln comes off east from FM 1378/Southview Rd about 1/2-mile south of the East & West Lucas Rd split (traffic light at FINA/Lucas Foods).

Looking forward to see y'all there!

2064. Digital Tuesday -- April 5th

Yahoo group: DAWG-HSMM
Date: 2011-04-05 23:25:06 UTC
From: Doug Garcia
Topic: 2063 Message: 2064

I wish I could attend the Digital Tuesday meeting. I am part of a group in El Paso that is working with HSMM and video. We are not able to access IP cameras directly through the Mesh nodes. We have started using WebCamXP software to setup a webpage that can support many cameras on the local mesh node. Viewing the streaming video on pc's attached to other nodes works very good. The downside is a computer is required on the node with the cameras. We will keep looking for a solution to eliminate the PC

Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the DAWG-HSMM
group.

File : /DigitalTuesday/olsr-topology.py
Uploaded by : kd4wlz <rusty@...>
Description : As promised... A re-write, in Python, of 'olsr-topology-view.pl' which is a Perl script that graphs the HSMM Mesh network. Added colorization and reduction of arrows in mesh graph. Like the original Perl script this Python script will run only on Linux because it needs ImageMagick and GraphViz to run. Don't even THINK about trying to run it on Windows.

You can access this file at the URL:
http://groups.yahoo.com/group/DAWG-HSMM/files/DigitalTuesday/olsr-topology.py

The description does state that their 18' White Titan flag pole works with the stand. Looking up this item shows the mast is 2" outside diameter made from 19 gauge steel (0.050" thickness).

>Specifically, could I insert the standard issue fiberglass camo support
>tubes you see at all the ham swap meets?

Dunno. You'll hafta do the math on that one. :-)

Showing how this worked was what the meeting Tuesday night demonstrated.

There are actually two ways to do this. I will show you the easiest, but
I need to know some information about the IP camera.

Can you access the camera with a PC and web browser if the mesh node is
not in between? Does it have its own "web page" for control and watching
the video?

Does the camera get its address from a DHCP server? Or does it only work
with a static address?

I have that same hardware. I was interested in porting the mesh firmware over to it but haven't started yet. If you find anything or would like to work together, please CC the list, mainly so I don't reinvent the wheel.

Are you using the M2 HP (High Power) version? The regular version didn't look like it had the horsepower to be a decent mesh node.

Here are the details:
We are using Trendnet TV-IP501W cameras.

They are wireless capable but we are using them with the wired ethernet port.

The cameras are accessable through a web browser.

We are able to control them with a PC on the same node.

The cameras are using static IP addresses.

Thanks for the help.

2074. Re: [DAWG-HSMM] Re: Digital Tuesday -- April 5th

Yahoo group: DAWG-HSMM
Date: 2011-04-08 15:29:19 UTC
From: Kipton Moravec
Topic: 2063 Message: 2074

So the cameras can not get a DHCP address.

Set the IP address to 172.27.0.250 on the camera. This is out of the range of 172.27.0.5 - 172.27.0.25 the DHCP server on the MESH node defaults to.

Plug it into a LAN port.

Go to Setup.
Then Click on Port Forwarding, DHCP, and Services.

Under Port Forwarding
Interface WiFi
Type TCP
Outside port 80
LAN IP 172.27.0.250
LAN PORT 80

Then press Add

On the Advertised Services
Name Camera
Link: http
80

Then Press Add.

When you see this on another node in Mesh Status and you click on Camera you should see the camera screen.

I've done some work towards porting hsmm to the picostation2. This is similar to the bullet2.

I've encountered a couple of headaches, such as:
- problems between microperl (and perl) and uhttpd which prevent perl scripts from displaying output on a web page
- the secure plugin for olsrd seems not to be endian independent. Rusty has mentioned that atheros is big endian, and the radio in the linksys routers is little endian.

I'm currently using openwrt's backfire release. I have been able to link a pico2 to a linksys hsmm router, but the environment on my pico2 was *not* hsmm because nothing was automatic, and I had the secure plugin disabled.

> Are you using the M2 HP (High Power) version? The regular version didn't
> look like it had the horsepower to be a decent mesh node.

Don't forget that the stock linksys has 60mw output, and yet the Austin folks and others in North Texas have demonstrated that that platform has quite enough horsepower to serve as a decent mesh node. ;) And, as hams, we all know that it is really the antenna that is the most important. :)

Not sure this fits the whole bill but take a look at nmap which can do part of the job. I use "nmap -sP " to look at my network at home.

I have the M2HP, Rocket and a Router Station Pro. I am currently porting on the RSPro because I have direct serial access to it. I just got the latest firmware on it but have not begun actually trying to connect it to my existing 54GLs yet. I don't think with Bullet, Rocket, and even RSPro that the ease of installation that exists with the WRTs is going to be that clean. At least not at first. Each of these seems to be using a slightly different driver (ie ath5k or ath9k). Also, OpenWrt default install does not include either the drivers, olsr, perl or wpad package.

Should there be a little discussion before hand to consider what UCI settings should be used for HSMM-MESH on the Ubiquiti platforms? After all, the ubiquiti hardware lacks NVRAM...

I'd be happy to forward information on how I've been creating an hsmm-olsrd opkg package. And I have a skeleton for an hsmm opkg package. Both are used to create packages for installation on a pico2 (just the base model, not an hp or an m2hp model). These packages are both work in progress, but they might help you if you are starting from scratch.

2079. Digital Tuesday (Plano-style) April 19th

Yahoo group: DAWG-HSMM
Date: 2011-04-18 20:31:35 UTC
From: Rusty Haddock
Topic: 2079 Message: 2079

Ok! Now that you're done with your taxes we're having another Digital Tuesday in the Plano area (Lucas, TX, technically).

Two items (at least) for Tuesday night:

1. Wireless access to your mesh by adding an access point, back-to-back, to a mesh node.
2. Show and Tell -- bring something digital that you've been playing, er...., working on for the rest of the crowd to see and discuss.

I will try to take video with sound of the meeting and make it available to those wanting to see how we can mess up a perfectly good meeting. :-) Let me know if you'd like to download it and I'll pass along the URL once it's available.

Meeting is at 7:00pm. Location is 299 Connor Ln, Lucas, TX (33.076433N, 96.573173W). Follow the driveway to the backyard gate, go around the pool to the pool house. Our meeting is in there.
Map is here: http://goo.gl/maps/EVub

Connor Ln comes off east from FM 1378/Southview Rd about 1/2-mile south of the East & West Lucas Rd split (traffic light at FINA/Lucas Foods).

Looking forward to see y'all there!

Any chance of posting these a bit earlier? They seem to show up in my mailbox the day before, which doesn't leave much time for planning. (I want to drop by, but can never figure out which Tuesday until it's too late!)

Even a couple of days in advance would be extremely helpful...

Sorry, vvvvvvvvvvv--- I fat-fingered the DAWG address. :-o
To: dawg-hsmm@..., mesquite-hsmm@yahoogroups.com,
austin_hsmm_development@yahoogroups.com
From: Rusty Haddock <rusty@...>
Subject: Digital Tuesday video from 4/19/2011
Date: Thu, 28 Apr 2011 16:25:38 -0500
Organization: 1/entropy

OK, here it is. Two things: the image isn't the greatest and not much
for detail but this was part of getting the filesize down to a 58-MByte
MPEG file from the original 2-GByte.

Upon inspection at the meeting I thought the camera had run out
of battery. Nope, it ran out of memory. The blank 2GB card was
not enough for more than about the first 28-minutes of the meeting.
I'll dig into the manual and see what more I can do besides getting a
larger memory card.

Folks, please don't complain about the video being too bright,
sound too low, seemingly not in focus -- I know, I've seen it a few
times myself. It's just my little digital camera that's setup and
fixed on a tripod in the back of the room so the rest of y'all can
see what goes on at our little meetings (besides the boozing, drugs,
and party girls afterwards :-). That's just the way it's gonna be.

Our Digital Tuesdays (Plano-style) are fairly loosely formatted -- a
couple of presentations and lots of questions and answers. And sometimes
things don't always work the way they're s'pose to. :-)

In this "episode" Kip starts out with is talking about the 'Wild Ride'
event in Richardson, TX. Later he gets into attaching a DD-WRT loaded
Buffalo router as an Internet gateway for the mesh with an Android phone
(I think it was).

Download from here:
http://myweb.cableone.net/rhaddock/Xfers/Radio/Digi_Tues_20110419.mpg

Filesize is 57,812,992-bytes so act accordingly. As I'm able to record
more of the meetings this file size will undoubtably grow significantly.
It may probably be best if you simply command-line it by using 'wget'.
Windows folks - wget is available for you too if you just Google "wget
Windows" but IE may make it viewable for you -- I dunno. Go with whatever
works for you.

Enjoy!
-Rusty-

P.S. Our next Digital Tuesday meeting for Plano, TX will be next Tuesday, May 3rd.

I like DD-WRT because I know DD-WRT. I like the interface. Almost all features are available via GUI.

I only install it on routers that are too small for HSMM-MESH. If you have a wrt54gl I would put HSMM-MESH on it and find a $20 router (supported by DD-WRT) for DD-WRT.

I have heard good things about Tomato, but I have not seen it, or played with it.

2092. Ubiquity HSMM

Yahoo group: DAWG-HSMM
Date: 2011-05-01 15:38:55 UTC
From: Don Weeks
Topic: 2092 Message: 2092

I have had some success in getting a Backfire image created that meshes with the 54GL HSMM nodes I have running. The platform at this point is an Ubiquity Routerstation Pro but the image is built to support Bullet, Rocket, and Nanostation. I will move to a Bullet soon as I have those and have no access to a Nanostation. The image consists of a standard OpenWrt backfire checkout with OLSRd built directly from the OpenWrt backfire load. The Backfire trunk now contains OLSRd 0.6.1 so I don't have to add it in. I also am using a standard uHttp, Luci frontend. I have not ported the HSMM front end. Most of the changes I have made have been hacked in by hand including adding my call sign, olsrd configuration, wireless configuration and others. I know I need to make this into a more complete image but that will take more time and I know others have expressed interest in Ubiquity products. I am willing to share with other developers configuration files and build techniques. What I need now is to learn how to build a customized image. I may go and ask for a branch in svn to check in what I have working so far. It depends on that as it is not far off the OpenWrt standard image. Backfire is quite different from Kamikaze so be prepared for that. The only thing I have ended up keeping so far from Kamikaze is the olsrd key file.

I encountered the same problem that Rusty has found with this. Since we know that the security plugin is broke, I would recommend that it be taken out in favor of access to more equipment. Ubiquity Bullets are cheap ($39 list new), already ruggedized, and easy to install.

Speaking of the Ubiquity Bullets, I'm in Springtown, TX and I currently have a WRT-54G installed in a "Rootenna" on the roof, but I've found no one in the area to link up with. I was wondering if the Ubiquity Bullet is the "go to" radio and if anyone was actively using them to extend the mesh network? Thanks in advance!

From: Rusty Haddock
Topic: 2096 Message: 2096

Three items (at least) for Tuesday night:

1. Prep for a Lake Lavon outing for this Saturday. Get out and experience a mesh that's working outside. Please participate in this event even if it's just putting your mesh node up on a piece of PVC, a long 2x4, or the top of your car. Bring your HT (mobile rig will do too), WRT54G, battery, laptop, fishing pole, bait, whatever. Hopefully the weather will cooperate.

2. Plans for Wild Ride. What can YOU do to help?

3. Setting up and doing DEMOS for HamCom.

4. I may give a quick summary of my trip to the Austin Digital Wednesday of last week.

I will try to take video with sound of the meeting and make it available to those wanting to see how we can mess up a perfectly good meeting. :-) Let me know if you'd like to download it and I'll pass along the URL once it's available. Maybe this time I can get more that 28-minutes.

Meeting is at 7:00pm. Location is 299 Connor Ln, Lucas, TX (33.076433N, 96.573173W). Follow the driveway to the backyard gate, go around the pool to the pool house. Our meeting is in there.
Map is here: http://goo.gl/maps/EVub

Connor Ln comes off east from FM 1378/Southview Rd about 1/2-mile south of the East & West Lucas Rd split (traffic light at FINA/Lucas Foods).

Looking forward to see y'all there!

It took me a while to get access but hang in there. He is very busy and will get to as soon as he can. The Ubiquity code is not in the HSMM SVN but is straight from OpenWrt which you can directly access.

I won't be able to attend the meeting as I will be out of town for work, but am interested in the Lake Lavon outing and the Wild Ride event. Will any details be sent out about that for those of us that are local but won't be at the meeting?

Right now the 54G/GL is the goto radio so you are fine. The Ubiquity line is in the works. What I like about Ubiquities are their packaging which is already ruggedized and that they are easy to install. Bullets run $39 list. The issue you will have is getting an outdoor antenna. I actually go N to R-SMA and use some off the shelf from Fry's indoor antennas in my testing. For pure meshing and outdoor installations, I can tell you that commercially, we use Bullet/Rockets.

Information I received on Wild Ride:

May 21, 2011 Richardson WildRide! Against Cancer Bike Rally and 5K Walk/Run.
Ham radio operators are needed to provide communications for this Saturday morning event.

The 64 mile bike route will travel from Richardson NE to Josephine, TX and back. The 5K Walk/Run leaves from the same parking lot at the Verizon building.

Six rest stops will be manned with both voice and digital operators. Each stop will be connected to the internet and the digital operator will take digital still photos and upload them to a website for display back at the Start/Finish. A laptop or notebook computer will be needed for uploading. Though not required, it would be a definite plus if the digital operator has an HSMM-MESH 802.11 node.

Hams are needed with vehicles that can be used as SAG vehicles. Also needed are operators with transferable radios to work in the supply vehicles.

Ten APRS trackers are needed for SAG and supply vehicles. We will be operating VHF and UHF.

Please volunteer by filling out the form at:

http://www.emailmeform.com/builder/form/PB21Ix9t2D4Xr3b96K8hc6Vi5

or contact Doug Kilgore KD5OUG <kd5oug@...> <mailto:kd5oug@...>

As for the Lake Lavon outing: my plan is to get a group together and dispatch everyone to a different place around the (mostly) southern side of Lake Lavon. From there, probably have everyone elevated their WRT54G's in some way, even if it's a 10-ft piece of PVC or a 2x4. Heck, you'd be surprised how good of a ground plane your car roof provides. :)

The idear here is to create a mesh connecting some of the various and sundry little public parks around the lake. Most of the links will be on the order of 2-miles between nodes so some reasonable elevation will be needed. If we can get an internet connection then maybe I can get an Echolink proxy or maybe even a Jabber server up and running so that we can voice or text chat. Worst case we'll have 2m or 70cm to chat on.

Here's a URL that should point to my Google Map for various locations.

http://goo.gl/maps/9Jj4

Any thoughts?

Per the meeting this past evening, our current plans are to meet at
2pm this Saturday, May 7th. Initial congregation will be at the usual
Digi Tuesday meeting place at 299 Connor Ln, Lucas, TX. From there we
will select our locations from the map (URL is above), make sure our
equipment is functioning correctly, and then take our places around the
lake from there.

Talk-in will be on the Plano (PARK) 2m repeater, 147.180+ PL/107.2.

I will try to send out a notice no later than noon if the weather looks to
be too ugly and we'll try to resked for some other time. Participants are
welcome to send me an email and I'll reply with my cell phone number if
you will be unable to check your email after noon. Or you can send me
your cellphone and I can call or text you IF IT'S A NO-GO. Yer call.

Let's have some fun! And don't forget, a 104" CB whip makes a dandy
fishing pole! :-D Don't ferget yer fishin' license.

Wish I could make this one. Less than a week's warning was too little
for me in this case. If it was announced earlier, I must have missed
it. I'll be in Murphy while you guys are at the lake. I'll plug the
node in the truck in, just in case. :)

I'll make it up to Digital Tuesday one of these weeks.

2104. Digital Tuesday (Plano-style) May 17th mtg -- RESCHEDULED!

Yahoo group: DAWG-HSMM
Date: 2011-05-04 06:30:36 UTC
From: Rusty Haddock
Topic: 2104 Message: 2104

Due to a conflict with the Wild Ride planning meeting on May 17th,
we have rescheduled the second Digital Tuesday meeting this month
to Wednesday May 18th, same Bat-Time, Same Bat-Channel.

Please mark your calendars!!!

[Kip, the PARK calendar will need adjusting as well.]

2107. Swap Node to AP??

Yahoo group: DAWG-HSMM
Date: 2011-05-11 21:55:01 UTC
From: Kilgore
Topic: 2107 Message: 2107

I have MESH Node in a Rootenna. I have need to connect to an existing distant wireless network. Can you switch between MESH node and DD-WRT just by backing up one firmware configuration and loading the other? Later reverse the process to return to Node with all settings remaining the same?

What difficulties will I encounter?

2108. Re: [DAWG-HSMM] Swap Node to AP??

Yahoo group: DAWG-HSMM
Date: 2011-05-11 22:53:05 UTC
From: Glenn Currie
Topic: 2107 Message: 2108

Doug,

The HSMM-MESH firmware allows you to configure the the node as a normal AP. Choose that option on the setup page, set the SSID you want, and you have an 802.11 AP.

This was done because we sometimes want to be an AP for a time then go back to being a mesh node.

If you wish to load other firmware, you can load using the TFTP method. Users have put Linksys factory firmware back on a WRT54G, after loading HSMM-MESH firmware. See the "Problems and Answers" section on the Forums section of the hsmm-mesh.org web site.

To go back to HSMM-MESH firmware you can get back by loading the proper .bin file. If you can get by with just changing to the AP mode in HSMM-MESH firmware, it saves a lot of reloading. When done with AP mode, then set it back to a mesh node with an SSID of HSMM-MESH.

In the Problems & Answers section we covered changing firmware for people that were loading and trying a variety of 3rd party firmware loads.

2109. un-bricking a WRT54G family router

Yahoo group: DAWG-HSMM
Date: 2011-05-13 17:37:25 UTC
From: Mark J Culross
Topic: 2109 Message: 2109

All:

For those of us who are playing with the WRT-54G family of routers & turning them into mesh routers, the day might come (whether as a result of a local screw-up, or because we found a router for a VERY cheap price somewhere) when you realize that your router has just become an expensive paperweight . . . unfortunately, it's been "bricked".

As I searched the internet for instructions on how to un-brick routers for Tommy & Bill (they bought theirs already bricked . . . no extra charge !!), here's the website that I found to be most useful:

http://linksysinfo.org/forums/showthread.php?t=47259

"Revival tip #2" worked just fine for me using a WinXP machine, & I successfully loaded the hsmm-mesh-0.4.1-wrt54g.bin (into WRT-54G & WRT-54GL) & hsmm-mesh-0.4.1-wrt54gs (into WRT-54GS) directly from these instructions, without having to load any original linksys firmware.

One note of caution: after you load the firmware file using the "tftp" command, make sure & wait until the lights start to behave as described in the normal instructions for loading the mesh firmware (the power light stops blinking & the DMZ light goes out, etc.). This can take what seems like a very long time . . . don't be impatient or you'll brick your box again & you'll just have to repeat the instructions (don't ask me how I know this) !!

Good luck & if you have any questions and/or need any help, I'll be glad to try & answer what I can and/or help however I can.

The only thing that I'll say is that, to ME, the second(?) revival tip
is NOT to be trusted. Even though the website warns the reader that
not all FLASH memories used by Linksys were of the Intel variety, that
there were numerous makes of those chips used, and even minor variations
in the circuits boards. Shorting those pins can be quite hazardous to
your router, even worse shorting the wrong pins. I have a WRT54G v2.2
that is quite dead to, what I believe was, my attempt to short those
pins in order to revive my non-responding patient. If it were me, this
would screwdriver thingie be my last ditch effort before throwing the
unit out into the trash. Surely, there may be some people out there
that swear by this method -- I, for one, will swear AT it.

If the 'tftp' method doesn't work then probably THE BEST WAY is to
connect to the first internal serial port (the console) and deal with
the situation from the command line of the monitor/bootloader. It's not
necessarily quick or easy but safer than sticking a tiny screwdriver
between short circuit board traces. I know this doesn't work for version
1.x of the 54G line but... those models are not that prevalent.

Please note that if your router has the HSMM-MESH firmware installed,
there is a fail-safe mode that I've used with 100% success in recovering
"bricked" units as well as those whose root password had been forgotten.
The method is here:

http://hsmm-mesh.org/documentation/71-using-safe-mode-to-reset-a-forgotten-password.html

Again, this is ONLY for WRT54G,GL,and GS units that were last running
the HSMM-MESH version of the OpenWRT firmware.

Rusty:

You've certainly been at this hsmm-mesh stuff alot longer than I have, so I'll defer to the breadth of your experience !!

However, before resorting to the method that I reported using successfully, I did reference the HSMM resource article that you pointed out. Unfortunately, neither of the units that I recovered gave any indications that they had been loaded with mesh firmware (one unit "seemed" to have an active LAN, but it was not providing DHCP addresses, it did not answer any pings in the traditional mesh IP space on the LAN side, & it did not accept a DHCP address on its WAN side . . . the other unit didn't even run, it just lit all LEDs in a purely random pattern . . . this second unit seemed to be running "something" that was almost certainly NOT WRT54Gx firmware !!).

I also found another resource (http://www.thenorth.com/apblog4.nsf/0/668D65A56B02BB4B852570A400535F16) that described a very similar recovery procedure using the reset button. Again, unfortunately, this approach had no effect on the first unit (& of course, since the second unit was "dead", it also had no effect on this unit).

Bottom line, you make a very good point that should be well heeded: one should certainly try all other less dangerous recovery procedures before resorting to the "shorting pins" method, which can definitely have bad side effects, maybe even router death (like the one you have ??). In the case of the two units that I recovered, both of them used Intel FLASH chips, so I got very lucky. I had planned to look up the Intel FLASH chip (as shown in the procedure) as well as any other non-Intel FLASH chips (that were inside the dead units) to identify exactly what the function is of the pins that are called out for shorting, & then to short out the appropriate pins on the non-Intel FLASH if needed. Again, luckily, I did not need to do anything different from what was described in the reference procedure, & this may completely be the reason why now we have two live routers instead of two dead ones.

As a side note, if you still have it, bring your "dead" router to one of the Digital Tuesday get-togethers . . . it might be fun to poke around in it (I can't make the 18th meeting . . . that's my older son's b-day & the family is going out to dinner, but maybe someone else might like to stick their fingers in it) !!

And finally, thanks again for the wise warnings !! I wouldn't want to be responsible for helping anyone to kill their WRT54Gx completely dead . . . that would violate my normal guarantee which is "I won't make your device any worse than it was when you gave it to me to work on" !!

The only thing that I'll say is that, to ME, the second(?) revival tip
is NOT to be trusted. Even though the website warns the reader that
not all FLASH memories used by Linksys were of the Intel variety, that
there were numerous makes of those chips used, and even minor variations
in the circuits boards. Shorting those pins can be quite hazardous to
your router, even worse shorting the wrong pins. I have a WRT54G v2.2
that is quite dead to, what I believe was, my attempt to short those
pins in order to revive my non-responding patient. If it were me, this
would screwdriver thingie be my last ditch effort before throwing the
unit out into the trash. Surely, there may be some people out there
that swear by this method -- I, for one, will swear AT it.

If the 'tftp' method doesn't work then probably THE BEST WAY is to
connect to the first internal serial port (the console) and deal with
the situation from the command line of the monitor/bootloader. It's not
necessarily quick or easy but safer than sticking a tiny screwdriver
between short circuit board traces. I know this doesn't work for version
1.x of the 54G line but... those models are not that prevalent.

Please note that if your router has the HSMM-MESH firmware installed,
there is a fail-safe mode that I've used with 100% success in recovering
"bricked" units as well as those whose root password had been forgotten.
The method is here:

http://hsmm-mesh.org/documentation/71-using-safe-mode-to-reset-a-forgotten-password.html

Again, this is ONLY for WRT54G,GL,and GS units that were last running
the HSMM-MESH version of the OpenWRT firmware.

Just a reminder...

Due to a conflict with the Wild Ride planning meeting on May 17th,
we have rescheduled the second Digital Tuesday meeting this month
to Wednesday May 18th, same Bat-Time, Same Bat-Channel.

Please mark your calendars!!!

2115. HSMM-MESH Nodes

Yahoo group: DAWG-HSMM
Date: 2011-05-18 04:53:58 UTC
From: Kipton Moravec
Topic: 2115 Message: 2115

I am building a HSMM-MESH Node Map for HAMCOM and to let people know what is where.

http://goo.gl/maps/3Mua

If you have a HSMM-MESH node up 24/7 let me know so I can add you to the map.

I need:
Node Name:
Street Address:
City:
Height above Ground Level:
Antenna Type
Antenna Gain
If directional antenna where it is pointed.

Thanks,
Kip

To: hamvention@...m
Date: Wednesday, May 18, 2011, 10:57 AM

Thanks to the very hard work of Ben, AK2X and awesome support from Icom America - North Coast Contesters are proud to host the Dayton Contest Cam - live from the Contest hotel in downtown Dayton - the
Crowne Plaza.

Live CAMming will start this evening and continue through Saturday night.
The CAM has an interactive text chat - so you can text the folks that you
see on the CAM and they can "talk" (there is audio on the CAM) back to you.
We expect guys will come up to the CAM and tell you about what is going on
at the Super Suite each night, CTU tomorrow, maybe the TopBand Dinner on
Friday night and we'll try and cover the Contest Dinner on Saturday night.
We'll move the CAM around to give you a feel of what is going on here. Hope
to do some interviews of guys here.

This is our first time trying this out, so it might be a little clunky,
please bear with us.

You can reach the CAM by going to anyone of the four Contesting website
front pages and clicking on the CLICK TO WATCH LIVE DAYTON CONTEST CAM.

http://contestsupersuite.com

http://contestdinner.com

http://contestuniversity.com

http://topbanddinner.com

We hope this new CAM helps bring some of the Dayton Contest experience to
all of those that cannot be here this weekend.

Very 73,
Tim K3LR

Once again the 'Four Days In May' (FDIM) convention at Dayton will be streamed
over the internet for those unable to attend.

To watch the stream go to - www.qrparci.org/fdimstream

Anything you see before 8am EDT on Thursday is likely to be a test
(possibly showing seminars from FDIM 2010 including the Elecraft Q&A Session).

It's not just QRP, the DSP seminar should be of interest to SDR users
and our keynote speaker is Nobel Prize winning physicist Joe Taylor
K1JT (of JTxx mode and WSPR fame).

Here is a schedule of some of the main events (note all times are EDT,
add 5 hours if in the UK) -

Thursday 19th May 2011

08:25 FDIM Opening Address

08:30 Dave Cripe, NM0S
The Plumbing Defined Radio

09:30 Jim Everly, K8IKE
Jay Slough, K4ZLE
Another Look at Crystal Radio

10:45 George Dobbs, G3RJV
In My Workshop

13:00 Joe Taylor, K1JT
Weak Signal Communication

14:00 Ward Harriman, AE6TY
Intro to DSP (without the math)

15:00 Chris Howard, WA4YG
QRP Kit Building For Youth

Friday 19th May 2011

19:00 George Heron, N2APB
SDR-Cube Transceiver

21:30 Rex Harper, W1REX
Build-along
The World's first Buildathon
to be streamed over the internet

Saturday 19th May 2011

19:00 Gala Banquet
Award announcements expected
around 20:00

Other Activities

We may stream a fly-on-the-wall view of other activities on Wednesday
- Friday evenings.

2125. Part 15 or Part 97 operation of HSMM-MESH nodes

Yahoo group: DAWG-HSMM
Date: 2011-05-20 03:14:47 UTC
From: kc4uai
Topic: 2125 Message: 2125

I have what amounts to a legal question...

It is my understanding that as long as you use the manufacturer's antennas and don't add power amps that HSMM-MESH nodes are really just part 15 devices like the stock routers with stock firmware. As such, you don't need a ham ticket to flash your router and put up a mesh node any place you want.

However, if you connect different antennas (like one with more gain)and/or add an amplifier for more power then it legally requires a ham ticket to operate the node as a part 97 device and that will require we only pass allowed traffic (like it not being encrypted). Given the nature of a MESH node, we may end up with a mixture of part 15 and part 97 devices working together to carry data packets on our mesh networks.

Is this a problem?

I'm a bit concerned that it may become one. Certainly if the mesh starts to provide internet connectivity in places, it will be pretty easy for the guy next door to me to flash a router and hop on the mesh with his totally legal part 15 device to get internet access. By using his part 15 device he can cause some part 97 device to carry traffic that is illegal (such as visiting a web site using the https protocol to check his bank balance).

What do you guys think?

Kip,

Is the Mesquite tower shown on the google map?

I imagine that we can likely see it from W5ROK if I knew what direction to point the patch antenna towards.

Also, do you know if AE5IB-AP3 can see the tower too?

WJ5J-A is the node on the tower.

WJ5J-EPC is up in a church steeple just west of 635.

Subject: [DAWG-HSMM] Part 15 or Part 97 operation of HSMM-MESH nodes

I have what amounts to a legal question...

It is my understanding that as long as you use the manufacturer's antennas and don't add power amps that HSMM-MESH nodes are really just part 15 devices like the stock routers with stock firmware. As such, you don't need a ham ticket to flash your router and put up a mesh node any place you want.

However, if you connect different antennas (like one with more gain)and/or add an amplifier for more power then it legally requires a ham ticket to operate the node as a part 97 device and that will require we only pass allowed traffic (like it not being encrypted). Given the nature of a MESH node, we may end up with a mixture of part 15 and part 97 devices working together to carry data packets on our mesh networks.

Is this a problem?

I'm a bit concerned that it may become one. Certainly if the mesh starts to provide internet connectivity in places, it will be pretty easy for the guy next door to me to flash a router and hop on the mesh with his totally legal part 15 device to get internet access. By using his part 15 device he can cause some part 97 device to carry traffic that is illegal (such as visiting a web site using the https protocol to check his bank balance).

What do you guys think?

I have not tried to hit the tower from AE5IB-AP3 because I do not have the height to get over the trees yet.

Wednesday I gave the guys at Collins Radio a 24 db antenna to see if they can hit it. It is 16 miles and I will bet they can. They have a roof top that is above the tree line.

Bob,

It is important to maintain security such that non-licensed operation not be mixed with licensed operation.

Commercial content limitations apply to the Amateur Radio Service as well. I don't run a mesh node yet, but I do have a high power node with a gain antenna that has a cell uplink which I use for EMCOM purposes. It is secure and I give the SSID out to those who need it.

One other point is that you need to make sure that you stay on the channels that are entirely within the Amateur portion of the band: channels 1-5.

Thanks & 73,

Gordon Beattie, W2TTT

It's my understanding that you can push some gear into channel 0 or -1..
basically out of the normal part 15 channel assignment but still within the
ham allocation.

Gordon (and others),

What you say squares with my understanding. The problem I see is that there is no way I can control the unlicensed guy next door. He can take his router, flash it with the HSMM-MESH firmware and my node will talk with his. If there is an Internet gateway on the MESH then he can use it and I have no way (short of turning my node off) of controlling this. The OLSR daemon will be happy to add this node to the mesh just like any other node. We need some way to know that the data my nodes are transferring is really from a ham. (See Part 97.115 c)

I was looking at the OLSR website and I found a paper that describes "Secure" OLSR. Basically this method uses signature keys to validate the various packets that OLSR uses to make the MESH work. I'd feel a lot better if the HSMM-MESH allowed for some kind of security to be established for the mesh network. Either let me filter the nodes I will allow my node to talk with or offer some way to validate that they are really a ham before my node will allow them into the mesh.

This leads me to a follow up question. Part 97.113 prohibits the use of codes or ciphers to obscure the meaning of a transmission. Does this mean that I am not allowed to use my mesh node to access an encrypted (i.e. HTTPS) web site?

Bob, please feel better then! The HSMM-MESH firmware does use the
described signature keys by virtue of the secure plugin for the
OLSR software. This will allow you to control what nodes connect to
your mesh. All you have to do is simply change the key in the file
"/etc/olsrd.key" on each of your routers. The contents of such contains
a 32-byte hexadecimal number that can be changed. After than the file
will need to be copied to your other nodes. I'll leave the process of
changing all the nodes in a mesh up to the reader but just remember to
paint the flagpole starting at the TOP, not the bottom! Think about it.

There is one issue with this though... if you take any of your nodes,
on which you've changed the key, mobiling around then you will not
connect to other meshes (meshi?) unless you install the proper key or
you switch your key file back to its original contents.

Another solution is simply to encrypt your mesh. I'm using WEP on
mine. Not the most secure encryption but it tends to keep the general
population off my mesh although my neighbors know better (save one or
two of their kids). I haven't tried using WPA2 yet but it should work
as well. WPA will not, though.

And the same thing applies as if you changed the OLSR key and want to go mobiling around with one or more of your encrypted nodes.

Keep in mind two more things:

1 -- it doesn't take too much to break a WEP key. If you want "real" security, what's it doing on the ham bands? Still, I understand what you're wanting.

2 -- changing the OLSR key doesn't keep me from using my laptop (without OLSR) to "connect" to your ad-hoc mesh and use your internet gateway although I do have to figure out one or two things about your mesh. With a packet sniffer, and knowng what the heck I'm doing, I can figure out those things fairly quickly. Naturally, this is AFTER I crack your mesh's encryption but that's against the law too, I believe. :-)

(OK, maybe three things)

3 -- I haven't experimented with it yet but limiting your mesh to certain Ethernet MAC addresses may be possible. Still, changing the MAC address used by a node is a trivally easy thing to do so spoofing such is easy too.

>This leads me to a follow up question. Part 97.113 prohibits the use of
>codes or ciphers to obscure the meaning of a transmission. Does this mean
>that I am not allowed to use my mesh node to access an encrypted (i.e.
>HTTPS) web site?

Technically (but IANAL) I believe it does since that's what HTTPS is intented to do -- obscure the message. Practically, and quite frankly, I seriously doubt that the Friendly Cookie Company will give a rat's behind about it unless they (or some other law enforcement agency) catch you breaking other law(s). That's just my opinion, humble or not.

Topic: 2125 Message: 2134

We are in the process of preparing our mesh network capability that we intend to use at our Field Day site in a couple of weeks. As part of these preparations, I have connected my RedHat Enterprise Linux 5.x laptop to the mesh & done some playing in that arena. I successfully installed all of the packages (including ImageMagick & graphviz) to allow the laptop to display OLSR maps . . . after some stumbling & bumbling (purely ignorance of these packages on my part) works as advertised (what else did we expect !?!).

Now for the question: it is almost certain that most of the "clients" on our mesh will be Windows machines. Since the OLSR map can currently only be displayed on linux machines with the proper packages pre-installed, I was thinking of ways to provide this same capability to the Windows machines. Of course, the old standby of running an SSH client & an X-server & simply logging into the linux machine from the Windows machines came to mind first. I can certainly get that to work on my own Windows machines (since I already have SSH & an X-server installed on my Win7 laptop), but that's not a "universal" solution (particularly the X-server necessity . . . that's not something John Q Public would normally have on his stock Windows machine).

So, here's the hair-brained idea: would it be possible to install the required ImageMagick & graphviz tools on the mesh node itself, have it generate the normal PNG file like it currently does & then publish that PNG in a self-refreshing webpage web-hosted from the node ?? That way the Windows machines could just display this new webpage in their browser of choice & get the map without any other installation requirements imposed on their machines !!

Thoughts ?!?!? How far in the weeds have I found myself & can I get "there" from "here" ?!?!?

OK, I feel better, However....

We really should do three things at this point...

1. Put a CGI screen in place to display/manage the key configuration.
2. Make the user enter a key during the initial setup of the node and refuse to operate until this is done.
3. Only give the key to folks with verified licenses (Like the Echolink folks do)

I guess I get to do some development now...

Well.. That sounds nice, but this is not how this works in other situations.

What happens if you are a repeater operator and you hear a person using your repeater to play music? As the control operator, you are responsible to stop it.

Am I not responsible for the traffic on my mesh nodes? I think I am. Right now my only options are to use a different key. (And even that is not documented very well yet.) Say I run a BDA and clearly are using Part 97 privileges on a node... It is my license and I *could* be fined $10,000/day for allowing illegal traffic to be carried on my equipment.

And on your last statement....

I think it is necessary to follow the rules even if the FCC is unlikely to find out or care. Seems that is part of the terms under which they granted us the privileges to operate. Your mileage may vary.

Seem likes the same accountability question as in packet radio. It has been a long time since I read the answer on that specific question, but memory tells me the BBS operator is not responsible for passed traffic, rather the originating party is. Some one could do some surfing and confirm this.

Mark, you've gone deep into weeds (are you smoking some? :-) and have
yet to realize that there are some nasty critters out there and yer
walking around barefoot! Nice try but let's look at some of the problems.

First off, ImageMagick is only needed for the display of the image,
something your web browser can do by its wittle, itty bitty self.
Not really a problem so we can cross it off the list.

The 'dot' program, in doing it's calculations to generate the .PNG file,
will put a serious hurt on a CPU. The CPU in our trusty '54G's is not all
that hefty. Having it computate those 'pretty' graphs will take away from
its ability to route packets and do its normal meshy, networky stuff.

Also, while the 'dot' program is fairly small, there are a number of library files that need to be pulled in at runtime in order for 'dot' to do its work. On my laptop they total up to about 3/4-megabyte. Sorry, we don't have that much Flash available on our mesh nodes. Even on the 54GS's with more RAM and Flash we still have the same ol' CPU and we're back to the previous issue.

At this point, the path in the weeds forks. On one side we have herbicide and on the other we have a weedwacker. :-) Here are my bald-brained idears. Either way, use some non-mesh node Linux/Unix machine to generate the .png. After that, you can choose one of the two paths:

1) scp the .png file over to a mesh node of your choice. Let its little webserver display the self-refreshing node map. Personally, I wouldn't update the graph as often as the Perl and Python scripts do but that's just my opinion.

2) Since yer gonna need a Linux/Unix machine to generate the graph, why not let it act as a webserver and serve up the self-refreshing node map itself instead of the wittle, itty, bitty mesh node?

Actually, putting a small Linux box on the mesh isn't such a bad idea since it can do a lot of things for you! It can act as a useful server for things like email, files, a chat server, Echolink proxy, and a suped-up web server. All of these things the wittle windows boxes can access and make use of, right? Heck, put a wireless card on the thing and run OLSR on the Linux box itself and let it be a mesh node.

Now let those critters stir around in the ol' gray matter for a bit and lemme know what you think, OK?

Have fun!

YOUR responsibility is for YOUR transmitter so far as 'repeating'
the music -- you have no control over the clown doing the original
transmitting! Naturally, it depends on what you mean by 'using
your repeater to play music' -- is the perp' using a phone patch?
While we are supposed to be self-policing that doesn't mean you can go
in and physically stop that critter from playing music on your repeater.
You couldn't control him if he was transmitting on simplex, or 2000-miles
away on HF, now could you? And do you leave your repeater operating
while you sleep? Who's the control operator then?

As nice as it sounds it DOES work in all situations. I stand by my
earlier statement.

>Am I not responsible for the traffic on my mesh nodes? I think I am. Right

You *could* be. Normally I'm a real stickler for the rules too -- my
early days as a ham was around employees of the FCC and communications
lawyers in and around the northern Virginia, Metro DC area.

BTW, how are you going to stop traffic from foreign countries from going
across your mesh if, say someone sucks down netnews from kremvax (yes,
an old joke) or points their browser to reads articles on the BBC or Al
Jazerra websites?? And this is of MAJOR importance if you're encrypting
your mesh!! If you wanna open up a can of worms be my guest -- I have
plenty of cans!

You are so right and I was being a bit facetious with that comment --
but it is true nonetheless (officials of the FCC, although not publicly,
have stated as much).

Enjoy the hobby!

I think it's different here than packet radio because it took a radio to originate the traffic to a BBS. Here, anyone with a part 15 device can access these devices.

What in HSMM constitutes a part 97 use? I keep getting this confused because I know of a lot of Ubiquity Bullets and Rockets, pushing 1 watt of power, that are deployed at high altitudes (250 feet on towers to some on sky scrapers). Presumably, this would put them over part 15 power levels but I have not heard of this being called into question by the commercial and public sites deploying. Some cities use these to deploy city wide and I have not heard of licenses being granted to the cities.

Rusty:

Thanks as always for your entertaining & informative answer !! You raise several very good points !! CPU loading: that could/would be of concern. Limited FLASH space: that could/would be of concern. That's exactly the kind of insight that I was looking for by asking the question & all inputs are much appreciated . . . we are very new to this mesh networking stuff & we are having a real BLAST playing with it !!

I can certainly put the linux machine on the mesh (we had already planned to have a RHEL5 machine to act as a fileserver for logging contacts & to act as our chat server), BUT (isn't there always a but in there somewhere), I was trying, right or wrong, to steer away from "requiring" the use of a linux box. For those (myself most certainly included) who are very comfortable in the linux sandbox, no problem, but not everyone likes to get their hands dirty in that way. For those who are comfortable only as long as the machines are running some variety of Windows, the linux solution would only add other potential problems, rather than providing a simple solution in their case.

Thanks again & I'll go put my shoes back on while I wander around some more out here in the weeds & see what I can find among the ruminations . . .

OK, if you wanna go to the "Dark Side" there are a few things to consider.

1) 'dot' is part of a software package called GraphViz. I know only
of binaries for Linux and then there are the sources as well. Oh,
hold on a minute. What's this?? A Windows version? Ooooooww....
Aren't you the lucky dog. Check this out:

http://www.graphviz.org/Download_windows.php

Nevermind the rest of the things... Maybe this could be your contribution
to our mesh world??? Perl and Python both run on Windows so...

Since you're going to the Dark Side, tell my Dad that I said "Hi!"

2143. A potentially useful addition ?

Yahoo group: DAWG-HSMM
Date: 2011-05-24 22:10:16 UTC
From: Todd Caldwell
Topic: 2143 Message: 2143

I've seen mention in several threads that it might be possible to run a version of HSMM-MESH on a linux PC.

That would seem to be a very useful tool to have in the toolbox, given the much larger storage capacity, and processor horsepower.

I was just wondering what it would take to do such a thing. I know we're perpetually short of developers, but we might have a few more folks that could work the PC side of linux than can the embedded version.

Bonus points if it's a plugin for a Trixbox install. An Asterisk PBX and webserver all in a mesh node would be handy. (And yes, I know it's been done in the router already. I'm more interested in a package that gives us more hardware options.)

Just some thoughts.

Todd Caldwell - K5SLR

Nothing. We're using Part 15 devices to accomplish HSMM. It's when we start modifying the units that we have to start using Part 97 since we'd be breaking the Part 15 rules.

>because I know of a lot of Ubiquity Bullets and Rockets, pushing 1
>watt of power, that are deployed at high altitudes (250 feet on towers

1-watt is the max per 15.247(b)(3). A quick search of Part 15 is not finding anything limiting the height of AP's. Maybe you can pass along a citation, Don.

I don't know about the HSMM-MESH firmware per se but to put your Linux
PC onto the mesh, why not?

Technically, to be part of the mesh you need to run an OLSR daemon with a
wireless card and configuring it to be similar to the mesh node config.
The 'olsrd' software provides a web interface on port 1978, just like
on the WRT54G's. I've done this with a little Zipit machine.

On the other hand, you can put a PC (Windows or Linux) on the mesh directly
by putting it in the DMZ from any mesh node.

In case you haven't seen my FaceBook post I thought I'd let y'all know about my latest experiment.

KEWL! [warning: geek out approaching!]

About a half-hour before sunset, and after the winds had calmed down just a tad this evening, my little Zipit Z2 computer

http://en.wikipedia.org/wiki/Zipit_Wireless_Messenger_(Z2)

went for a ride on one of my kites, an "F-15". Alas, no sensors were on its maiden voyage BUT the little guy was configured to be part of my HSMM-MESH(tm) network (I had olsrd running on it) and it worked just fine.

Total string length was about 100-meters or 328-feet. Wind was about 5-10 mph, gusting to about 15-20 mph. I would say the top altitude to be about 175-200 feet above the ground and it could "see" quite a few of the neighbors WiFi access points when I "talked" to it (some I hadn't seen before). :-)

I've said a few times that I oughta try this sometime -- the kite should be able to fly with the little Z2 tied to it -- and it did and it worked well! Came down for a soft landing too and still "ticking".

Anyhoot, I wuz just geeking out. I'm really fairly harmless when I'm doing that. It's a shame the sound output isn't louder or I'd have it playback "EXTERMINATE! EXTERMINATE! EXTERMINATE!" in true Dr Who-esque Dalek fashion when it was flying over the neighbor's house. :-)

OK, enough for now. That wind'll really take it out of ya. I have some pictures that I may post later.

Probably not from my roof, but most assuredly from the 65-foot tower at our high school club station (NG5HS) a few miles west. I don't climb, so I'd need some help with this one.

Maybe a summer project if I get the time and the help...

2151. displaying the mesh topology map on a Windows machine

Yahoo group: DAWG-HSMM
Date: 2011-05-29 17:03:19 UTC
From: Mark J Culross
Topic: 2151 Message: 2151
Attachments: 2 described; binary payloads are missing from this source WARC

Success !! Let me start out by saying "this is definitely still a work in progress" !! NOTE: anyone should feel free to push this to the hsmm-mesh higher echelon as needed/appropriate (I don't have an established presence there yet, so I would not feel comfortable doing so myself).

With that said, here's a first-cut at a method for displaying the OLSR topology map on a Windows machine (I am running WinXPpro specifically), which heretofore was only defined for doing so on a linux machine:

PREPARATIONS:

1) download & install python (I used "python-2.7.1.msi" specifically) from the following URL:

   http://www.python.org/download/releases/

2.1) download & install graphviz (I used "graphviz-2.28.0.msi" specifically) from the following URL:

   http://www.graphviz.org/Download_windows.php

2.2) NOTE: I seem to remember that I had to manually add the graphviz binary folder to the search path (C:\Program Files\Graphviz 2.28\bin), but I don't know if I did it or if graphviz did it & it became available following a reboot . . . you'll have to experiment & verify

3) copy the two attached files ("olsr-map.py" & "olsr-map.html") to a convenient place (I used "C:\olsr-map" specifically)

EXECUTIONS:

4.1) open a command prompt

   click Start, Programs, Accessories, Command Prompt

4.2) change to your convenient place that you used in step 3) above

   cd C:\olsr-map [RETURN]

4.3) run "olsr-map.py" in the command prompt window

   olsr-map.py [RETURN]   NOTE: this can be stopped using CTRL-C if needed

4.4) open a Windows Explorer window using your favorite method - mine is as follows

   right-click on My Computer on the desktop & select Explore

4.5) change to your convenient place that you used in step 3) above

click on "C:\olsr-map" in the left-hand pane

4.6) run "olsr-map.html" from the Windows Explorer window

double-click on "olsr-map.html" in the right-hand pane

EXCEPTIONS:

OK, now for the fine-print . . .

a) "olsr-map.py" occasionally emits an "Access is denied." message . . . reason unknown . . . does not seem to cause any problems (except to those of us who suffer from OCD & these kinds of "unexplainable" things drive us NUTS !!)

b) "olsr-map.py" occasionally exits with a report that says something to the effect of "socket.error: [Errno 10054] An existing connection was forcibly closed by the remote host" . . . reason unknown . . . fatal: see c) below

c) "olsr-map.html" will happily continue on its merry way, continuously displaying the "latest" map image, regardless of whether "olsr-map.py" continues to run or not . . . this means that if "olsr-map.py" has stopped/crashed, "olsr-map.html" will continue displaying a STATIC map, with no indication that anything at all is amiss !!

FUTURE EFFORT(S):

- I plan to update "olsr-map.html" so that, in addition to the map graphic, it also displays the timestamp from the latest map graphic file . . . that way, if the timestamp goes static, you know that "olsr-map.py" has probably stopped/crashed (again)

- I'd like to move away from using python & try using java instead . . . hopefully, this will alow a single "program" to initiate both the generation (calling dot) of the map graphic & the display (using html) of the map graphic (as well as allowing the same "program" to run on any java-capable platform) . . . doing this will require alignment of all of the planets just perfectly, but ONLY after the "honey-do" list is complete (IYKWIM) . . . until then, "it is what it is"

Good luck & most of all, have fun !!

Congrat's! I'll pass your message here onto the folks in Austin.

>- I'd like to move away from using python & try using java instead . . .
>hopefully, this will alow a single "program" to initiate both the generation
>(calling dot) of the map graphic & the display (using html) of the map graphic

This can be done with any of the GUI interface packages for Python, such as
wxPython and tkinter.

>(as well as allowing the same "program" to run on any java-capable platform)?. .

Well, Python does a pretty fair job of doing this too.

FWIW...

2154. So no takers on a 65-foot tower climb?

Yahoo group: DAWG-HSMM
Date: 2011-06-04 16:39:45 UTC
From: wa3ite
Topic: 2154 Message: 2154

I'd be willing to host a node if someone would be willing to climb a 65-foot tower to install the antenna (my limit is about 30 feet). This would fill in a big gap between the nodes to the north and the nodes in Mesquite. I'm assuming we can make a coax run from base to top without any significant loss in signal strength? If so, what's normally used for run of this length?

2155. Re: [DAWG-HSMM] So no takers on a 65-foot tower climb?

Yahoo group: DAWG-HSMM
Date: 2011-06-04 17:39:57 UTC
From: Todd M. Caldwell
Topic: 2154 Message: 2155

Hi,

The way you do this is to get some outdoor rated, preferably shielded, cat-5. The node goes in a box up at the tower location with very short cox runs to the antennas. Power comes up via the cat-5. one or more cat-5 lightning protectors are probably in order as well.

I'll ask around in the Mesquite group. We might have a tower climber or two.

Easy enough. If you can find someone willing to climb, I'll get a node set up, enough cat-5 to make the run twice, and access to the tower. Any antenna recommendations?

2157. Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2011-06-06 17:49:50 UTC
From: Rusty Haddock
Topic: 2037 Message: 2157

Tuesday June 7th is the next Digital Tuesday.

7:00 start time
6:30 if you want help loading MESH software on your router.

299 Connor Lane
Lucas, TX 75002

Follow the driveway to the back gate and to the pool house.

The big item for the night is meshing around at HamCom.
Kip will have his server available (that I've been building :-)

And there was something else but I can't think what it was.
Kip-ster, do you remember?

Rusty should also have some good HSMM-MESH news to present to the
group so...

BE THERE (or be somewhere else and probably miserable :-).

2158. An Extra Hour of MESH Talk at HamCom!!!

Yahoo group: DAWG-HSMM
Date: 2011-06-08 18:52:51 UTC
From: Rusty Haddock
Topic: 2158 Message: 2158

Yes, it's not on the HamCom schedule 'cause we just got the OK to (ab)use
an empty room from HamCom coordinator John Beetles on Tuesday afternoon.
I have what I'd call an advanced MESH topics talk at 2pm although it
will not be in the same room as the currently scheduled talks at HamCom.
I don't plan on going the whole hour so Kip and/or Glenn may have some
other topics with which to blow your mind as well.

"Advanced Topics in HSMM-MESH -- Configuration" will be presented in the
Fairview rooms at 2pm on Saturday. These rooms are right next door to
the Sunny Slopes rooms that the 11am and 12noon presentations will be in.
We'll have an hour break from the end of Glenn's MESH Update presentation.

It won't be for the faint of heart so bring your nitro'... if you dare!

See you there!!!

From: Kilgore
Topic: 2160 Message: 2160

My grandson John Lake KD5RVJ will be working in the National Weather Service booth at HamCom on Saturday. Look for the tall, skinny young man.

John got his Tech license at age 12. He has helped on public service events during his high school years - the Richardson Christmas Parade and the White Rock Marathon. One summer he attended the Skywarn school at HamCom with me. That piqued his interest in meteorology. He is now a Senior at Texas A&M completing a double major of Meteorology and Computer Science.

Be sure to stop by on Saturday and say hi. Tell him you know me.

Topic: 2161 Message: 2161

Hi Everyone,

Since it's my first post I'll give a little self introduction. I've been licensed (KC5VQD, now W5ISP) since 1996. I started a Wireless ISP (Verona Networks) in 2001 for myself and friends/family, and took it commercial in 2006.

I'm in the process of getting hsmm-mesh ported to run on Ubiquiti hardware since that's what I use for some client delivery and have a fair amount of spares on hand at any given time.

Does anyone have a snapshot of the current source tree they can send me? I requested access last week and haven't heard anything. All of my development will be posted to an open repository on github once it's closer to working.

Thanks!
Graham McIntire

Graham, between the real world and prep'ing for HamCom we have all
been rather busy.

>Rusty can help you more. There is a SVN repository of the code you can

I do but it requires an account on the server. Access to the source
code comes from David Rivenburg, AD5OO, ad5oo@.... Besides,
I don't have a pristine copy to give out.

2164. HSMM-MESH Webinar

Yahoo group: DAWG-HSMM
Date: 2011-06-15 20:03:31 UTC
From: Kipton Moravec
Topic: 2164 Message: 2164

I am looking at August 13 for the next HSMM-MESH Webinar.

Does anybody have a good reason to not have it on that day? Usually we will start at 9:00 a.m. Central Time and we can go as long as we want.

If this is something you are interested in presenting something about, contact me directly and we can work something out.

The guidelines are you will need a headset, and windows computer. Remember video does not work at all. The relay is too slow.

I am working at running it like we did in January from the Lucas Fire Station, but presenters can be physically located anywhere in the world as long as they have a good Internet connection. So to present you do not have to be in Lucas. To attend you can also be anywhere.

As soon as I confirm the Fire Station and Webinar Availability I will make an "official" announcement.

How 'bout in September or October when it's not so blazing hot outside???
This allows any sort of outside activity, such as putting up nodes, masts,
etc. to be a bit more tolerable.

And can we please have the session recorded in a STANDARD video
format and not the proprietary format of the past? Making the webinar
available afterwards is pretty much predicated upon the availability of
a non-Windows proprietary file format. I've got last winter's session
and trying to convert it to something web-friendly like MPEG4 or much
anything else has been a real chore.

Any sort of theme or direction for this webinar? Maybe something a
little less basic than the past?

Topic: 2169 Message: 2169

Our club is exploring the HSMM Mesh concept in our community. We have access to a lot of strategic locations to do a mesh network. I bought a bullet last fall and a omni waveguide antenna for the first node at my house. Anyways, most of the work so far has been with linksys routers. The Ubiquiti equipment seems to be well suited for the task at hand. So, for those of you that have worked with the bullets, do I need to re-flash them with openwrt and then add olsr???
Has anyone done this??? Can someone point me in the right direction???

Topic: 2172 Message: 2172

Tuesday June 21st is the next Digital Tuesday.
Right on the Summer Solstice too!

7:00 start time
6:30 if you want help loading MESH software on your router.

299 Connor Lane Google Maps
Lucas, TX 75002 http://goo.gl/maps/Saah

Follow the driveway to the back gate and to the pool house.

I haven't heard from the Kipster but I'm sure we'll talk some about the
wild time at HamCom.

BE THERE... or be somewhere else and probably not having near as good
of a time! :-P

Todd, I will have your POE injectors.
Patrick, would you mind bringing one of your buckets to show off??

2175. Re: [DAWG-HSMM] Part 15 or Part 97 operation of HSMM-MESH nodes

Yahoo group: DAWG-HSMM
Date: 2011-06-23 21:52:16 UTC
From: Bob Diepenbrock
Topic: 2125 Message: 2175

Just rememember....

Once you take off the builder's supplied antenna, you will nolonger be in part 15 operation. My node at home is an example, it's part 97 because I have a beam attached to it. Yet, the guy next door could easily put up a part 15 device and use my node for something that's not allowed on ham radio and I'm the one in legal trouble.

My point here is that we really need to control access to HSMM-MESH nodes to folks who have a part 97 license (in the USA) just like the Echolink guys do. They have to see your license, then they will let you connect to their system. APRS works in almost the same way, you have to validate that you have a part 97 license if you want to have full use of the website.

I can imagine easy ways to do this, but the HSMM-MESH firmware doesn't support them in the current form.

From: Bob Diepenbrock
Topic: 2143 Message: 2176

You are correct.

I can imagine being able to set up "super nodes" with multiple wireless cards connected to multiple directional antennas running on common off the shelf PC hardware. Then you would have a lot of horse power and storage space on your linux box to run all sorts of other things. I imagine that these "super nodes" would be located in key locations and comprise the "back bone" network for a HSMM-MESH area.

As Rusty says, it's just necessary to talk OLSR with the other nodes you can see in the mesh and have the OLSR security key configured and you are on the mesh. I'm told there are some bugs in the OLSR software that causes problems between platforms, but I thought that a fix for that was forthcoming.

From: Bob Diepenbrock
Topic: 2154 Message: 2177

Well, you don't want to run 60 feet of coax at 2.4 GHz unless you have some kind of amplifier. Even LMR-400 will have nearly 19 dB of loss. What you want to do is put a CAT-5 run up the tower and use "power over Ethernet" techniques to power a router in a weather proof box up in the tower.

However, be careful with the CAT-5 you pick. Most of the cable you will find will not fair well in sunlight and most of it is solid conductor cable which will work harden and break pretty quick if it is handled much.

If you are still interested, I may be able to help finding the enclosure and some antennas.

2178. Re: [DAWG-HSMM] hsmm-mesh source

Yahoo group: DAWG-HSMM
Date: 2011-06-23 22:26:18 UTC
From: Bob Diepenbrock
Topic: 2161 Message: 2178

Welcome to the HSMM-MESH...

I'm not sure what the Ubiquiti hardware is, but I can describe what the HSMM-MESH firmware is and why it runs on the linksys hardware.

Linksys used some GNU software in their past wireless routers. GNU software requires that you release your source if you change it and release it to your customers. This forced the release of the source code for some of the Linksys router offerings. Some folks took this source code and cobbled together a Linux variant that could use all the hardware on the Linksys routers and since then they have been used as small linux boxes on many networks. OpenWRT I believe is the name of the project that did this. HSMM-MESH just uses that as a base and puts their own user interface on it.

So, if you can get Ubiquiti hardware to run a variant of Linux and get the necessary drivers to get all the hardware working on them... It would not be too hard to get HSMM_MESH built and working on the linux platform, assuming there is enough storage space and memory. Once you had all the services up and running that HSMM-MESH requires you'd be basically on the MESH with new hardware.

I would be cool if we could somehow incorporate our calls in the mesh
protocol so that if there wasn't a somewhat valid call proper length format
ect or non at all the nodes would just ignore the outsider.

Ah ha! I've been looking for where this message went to and now I have found it.

Floyd, the video from the webinar is a WMV file encoded with G2M3, a special video codec used by GoToMeeting. If you have some program or process to convert this file to, say, MP4 or something less proprietary I'd be glad to get you the file to convert.

Bob:

I have been looking at the Ubiquiti platform for a while, specifically the routerstation pro. It is a board with 128MB RAM and 16MB flash. It will take up to 3 mini-pci cards such as the XR2 2.4GHz, XR3 3.XGHz XR5 5GHZ. It ships with OpenWRT by default so I would think it would not be too difficult to get the HSMM-MESH firmware to run on it. Something like this could possibly used for providing local mesh and a backbone link on another band say 3GHz where we are the primary user, I believe. Down here is South Florida, it is really flat, but spread out to a point where the concentration of mesh nodes would not allow us to carry data very far without some high gain backbone links.

From: kb1tce
Topic: 2185 Message: 2185

I joined this group some months ago and am plugging away learning the HSMM technology. I really like working with Netmeeting but it's been deprecated by MS and a couple of my friends only have Windows 7 laptops. One has tried Pidgin with Bonjour for Windows but it's only text. Everything else seems to need a server, generally in the vendor's cloud.

Is there anything else that folks have been looking at -- or has anyone been able to use Netmeeting on Win 7? (However, I think that the only download available is the older Win98-Win2k version, not the XP version.)

Thanks,
Steve KB1TCE

Hi Dave,

In a quick look at Spark I didn't see any video capabilities.

Are the other netmeeting type servers windows systems? The reason people are looking at Netmeeting is that it runs under windows. Windows XP home and professional come with it on the systems disk as a service.

I like Netmeeting, just that Windows XP is the end of the line for it.

Openfire and Spark are Linux, Windows and Mac. From what I can glean
after a brief scan of their site is that Openfire/Spark don't have some
of the Netmeeting functions like streaming video and whiteboard.

Yes, they do have whiteboard and video. RED5 is the video app and the Whiteboard is included with Spark I think. I use them occasionally but not as often as I'd like.

Really nice stuff and I've used them with my small Creative webcam.

Great info. One question - one of the docs on their site indicates (I think) that Spark can be used P2P with Spark w/o the server application. Is that the case?

I'll have a chance to play with the apps a little later on.

Not sure about that; I only used it with the server so I could connect in conference mode. I would think so, yes, as there's no reason why a P2P isn't possible. It's good stuff and stable. I used it in a similar situation of a closed LAN with P2P WiFi so I know it works hardwire and on the air. Good luck; I think this is the app we should be using for HSMM.

I got Spark downloaded and now their server is down for maintenance so
I'll have to wait a bit to get Openfire.

If it does do what it sounds like it does, then it would be a good
application for HSMM. Netmeeting, unfortunately, is one platform only
and is now 2 generations of MS Windows out of date.

2197. Fw: SK KD5TEC Gordon Keahey - killed by a "texter"

Yahoo group: DAWG-HSMM
Date: 2011-06-30 15:12:09 UTC
From: Patrick Soileau ND5C
Topic: 2197 Message: 2197

This is a perfect example of why the Texas State Legislators need to get off their collective butts and pass some form of bill which restricts these incredibly distracting activities while driving a motor vehicle.

Good and decent people are hurt on a daily basis by someone else's carelessness or for the sake of someone else's "convenience".

I don't think the "driving while distracted" law was perfect, but it sure seems like it needs to be re-thought, fine-tuned, and passed into law to give the police the ability to help stop stuff like this from happening.

It is my displeasure to make this announcement. Patriot Guard Rider and SKYWARN Spotter KD5TEX is now a silent key. While riding his motorcycle in Rockwall county he was hit head on by a person who swerved out of their lane while "texting". He leave behind one son and his ex-wife.

2198. 1776

Yahoo group: DAWG-HSMM
Date: 2011-06-30 19:30:11 UTC
From: Kipton Moravec
Topic: 2198 Message: 2198

Take a break from the heat and do something patriotic indoors. Come see the Musical 1776: Tale of the Continental Congress.

What is it about?

In the days leading up to July 4, 1776, Continental Congressmen John Adams and Benjamin Franklin coerce Thomas Jefferson into writing the declaration of Independence as a delaying tactic as they try to persuade the American colonies to support a resolution on independence. As George Washington sends depressing messages describing one military disaster after another, the businessmen, landowners and slave holders in Congress all stand in the way of the Declaration, and a single "nay" vote will forever end the question of independence. Large portions of spoken and sung dialog are taken directly from the letters and memoirs of the actual participants.

This is being produced at the Art Centre Theatre, 5220 Village Creek Dr., Plano, TX 75093 214-810-3ACT (3228). The theater is west of the intersection of Plano Parkway and Preston Rd. in Plano.

I will be playing the part of Cesar Rodney delegate from Delaware, and my wife, Delynda, will be playing the part of Abigail Adams. We do ot do very many shows together. And this is a good show for the whole family.

The Dates of the show are:

Friday, July 1 at 7:30 p.m.
Saturday, July 2 at 2:30 p.m. and 7:30 p.m
Sunday July 3 at 3:30 p.m.
Thursday July 7 at 7:30
Friday, July 8 at 7:30 p.m.
Saturday, July 9 at 2:30 p.m. and 7:30 p.m
Sunday July 10 at 3:30 p.m.

Click on the link to purchase tickets.

http://www.artcentretheatre.com/tickets/

Today, Thursday June 30, if you use the ticket code: 1776 you can purchase the tickets for $10. Otherwise they are $12 in advance and $15 at the door. When you order the tickets say you heard it from Kipton.

Since next Tueday is the 5th of July, right after the holiday, Kip and I decided that we'd cancel the Digital Tuesday meeting for that evening.

Please plan on coming to the DigiTuesday meeting on the 19th, third Tuesday of July. One thing we will discuss is whether the group would like to go to once-a-month meetings or keep with the twice a month schedule.

Also, what do YOU want to do? Do a little APRS, WinLink, or ????
Suggestions are welcome! Let us know.

Have a safe Independence Day!

From: K0YR Thomas Rieff
Topic: 2200 Message: 2200

Thanks for the headsup on Openfire and Spark.
Have openfire installed on Ubuntu for testing.
Spark works as both a windows client and Ubuntu client.
Trying to work through the Red5/Redfire plugins.
This should be a simple way to use HSMM.
How are you going to implement Openfire on your HSMM system???
Now to just get HSMM going. Hi Hi.

Openfire and Spark filled an immediate need for us in terms of putting in place a non-cloud chat for coordinating our 80 meter digital training net. We use a 2 meter repeater but not everyone can get the repeater. It sits on the screen nicely with Fldigi and is easy to use. The folks on the net have a mix of Linux, Apple and Windows computers so it fits everyone.

Like you, we're trying to figure out how to apply it to HSMM. Not quite there yet so some pointers from those who have done it would be appreciated from this quarter too.

Red5 is a JAR; just place it in the Plugins dir and that's all. Select from File, Plugin and the option will self-identify in the Menu Bar. Really simple after a lot of work.

I took down my HSMM after I could find NO ONE interested. Tied up a bunch of my stuff so I could say I had one. Nobody interested means waste of equip (here) so best of luck to you. I does work and it is a grand idea. Wireless LAN; who woulda thunk?

Here's one of the resources I found: http://code.google.com/p/redfire/

Right now it's just one other fellow and myself. We're at the pretty basic level: I have set up a simple ad hoc network between a laptop and netbook using Netgear wifi adapters. I've got Openfire and Spark functional on this set up. I just got a pair of $30 1 watt (30 dB) USB wifi adapters (with separable antennas) that we'll try for additional range with directional antennas. At the present we're just interested in point to point so no need to get into mesh networking at this time.

Keep going... It will work over longer distances but fade may be a problem. I still think, despite the lack of interest here, that HSMM and the Openfire network together form a really nice, closed-loop ECOMM system with incredible potential. Eventually, it will go laser and then the real fun will start.

Dave et al,

I loaded up Openfire for Windows on my XP/Pro laptop and created an administrator account and password.

I used the local database option when setting it up as I don't have a server. I was all set to install it on another laptop on my LAN when I noticed that I could not log into my administrator account. What might I be doing wrong?

Thanks & 73,

Gordon Beattie, W2TTT

Subject: [Bulk] RE: [DAWG-HSMM] Openfire Spark for HSMM

Keep going... It will work over longer distances but fade may be a problem. I still think, despite the lack of interest here, that HSMM and the Openfire network together form a really nice, closed-loop ECOMM system with incredible potential. Eventually, it will go laser and then the real fun will start.

Dave,

Well, at first I was despondent when I found out that Netmeeting was obsolete after I got it to work but Openfire/Spark is quickly growing on me. I think that there might be some interest around here for emcomm use also. We'll see. Good stuff.

I think its hard to get people very interested over such a short range with the Linksys routers. When you go from 10's or hundreds of miles to single digit miles, it becomes a little less interesting. I think it has great potential and am still interested in it, but I think that the Linksys routers are only a good way to get familiar with the protocols and operation of the firmware, but that it is just too low powered for any practical use. I know several people are looking at using the Ubiquiti Bullets and some other hardware which is much higher powered, and once those become a little easier to load the firmware and more people using them, it will be more practical. I personally am saving up to get some Ubiquiti router stations and some Xagyl 440 Mhz cards (when they become available) and some Ubiquiti 2 GHz cards. They are higher powered and provide more potential than the 17dbm Linksys.

I also have several 250 mw, 500 mw and 1w amplifiers that I could use, but if everyone else is using such low powered devices on the other end of the link, it just doesnt do much good...

I have a couple of Ubiquiti Picostation 2HPs (30 dB) plus a pair of the horribly named Vagi antennas. So far I haven't gotten them to do anything except ping each other. That says more about my wireless networking skills than anything else. The nice thing is that the antennas will work with the 30 dB adapters I just got and those will work in a point to point ad hoc network. Once I get Red5 working we're going to a large open field to see how things go.

I've used openfire here locally with mesh over packet radio. We have had some good results so far. I've personally been using it for almost a year now.

If I remember correctly, an older version of openfire had a problem that login wouldn't work until it was restarted. Try that, and make sure you're using version 3.7.0 or greater.

Regards,

Try closing it and then reopening from your programs directory. You'll get a splash screen. Click on Launch Admin and then enter admin and your password.

Kip,
On a totally different subject, Trudy and I really enjoyed 1776 Saturday evening !
As it happens we watched 1776 on 'THIS' Monday afternoon and were very pleased to see how closely the efforts of the cast matched the movie !

Thanks for giving us the opportunity to see the play !!

From: K0YR Thomas Rieff
Topic: 2217 Message: 2217

DAWG...
I am trying to get my hands around hsmm mesh.
Is this a variant of something???
I have seen the following tossed around as mesh firmware...
hsmm mesh
open wrt
dd wrt
open mesh
olsr
air os
Given the cost of units linksys and/or Ubiquiti bullets, it would seem the the best value is the bullets. I had a conversation today with an IT person in town that mentioned that he just ordered some bullets for 5.8 in their private network. Maybe I am making more out this that I should. If I decide to got the bullet route, and I already have had one for a year. Maybe I do not really need to changed the firmware and just use it as is.
Just thinking out loud.
Thanks in advance.

Greetings,

If you check this link, it will give you an idea of the intended use for HSMM-MESH.

<http://www.hsmm-mesh.org/documentation/67-hsmm-mesh-design-philosophy.html>

There may also be other documents on the hsmm-mesh.org web page you might find useful.

2220. Flag pole car mounts

Yahoo group: DAWG-HSMM
Date: 2011-07-08 18:32:54 UTC
From: Todd Caldwell
Topic: 2220 Message: 2220

I recall us discussing - perhaps at HamCom - that there might be interest in putting together a group order for the park-a-car-on-it sort of flagpole/mast bases that several in the group have.

Specifically, this is the mount in question:
http://www.united-states-flag.com/flag-pole-car-stand.html#

I've polled the Mesquite group and we have more than the 6 units required to get the $23 price already.

Is there interest in this group (DFW local only) still ?

If so, perhaps we can coordinate.

Todd,

I'd like to get one and possibly a couple of people from the Rockwell Collins Amature Radio club in Richardson TX have been talking about getting the bases and then the poles (I could check with them).

I used one during the Wild Ride (Thanks Doug) and it worked great (has been returned).

If you need to place the order soon just get me two. Please let me know how the price and shipping works out. When do you think you might order?

2225. Re: Openfire Spark for HSMM (Redfire Plug In)

Yahoo group: DAWG-HSMM
Date: 2011-07-11 13:22:24 UTC
From: kb1tce
Topic: 2200 Message: 2225

From the Ignite Realtime site I gather that the now preferred plug in for audio/video is Redfire. I've tried it but can't get it to work. According to instructions, such as they are (scattered across various forum strings), I installed the redfire.war file in the Openfire server plug in folder and the redfire-plugin.jar in my Spark plug in folder.

The .war file seems to have done its thing properly in Openfire although it does not show up on the list of installed plug ins. In Spark I get the icons for audio/video and screen share.

I haven't tried the A/V yet but have tried the screen share. When initiating the session I see the request to accept/reject the share but then when I accept I see a new page with HTTP Error 404: Problem accessing /redfire/screen/screenviewer.html. Reason: Not Found

I am doing this with two XP Pro machines.

Just wondering if anyone has gotten this to work and, if so, how.

I have gotten all of the text chat features and the whiteboard plug in to work.

It's weird, but the WAR is supposed to be a JAR file. I think the download program changes the extension. Change it to JAR and see if that works. I think that's what I did.

From: shansen@belljar.net
Topic: 2200 Message: 2227

I confirmed with the programmer that the war file goes into Openfire. He did look at my error logs and it appears that I got the wrong rev war file. There's one for Openfire 3.7.0 and higher and another one for earlier revs of Openfire. It looks like I installed the wrong one. I'll find out tomorrow.

Redfire (the new plug in that replaces Red5) is more tightly integrated with Openfire from what I can gather which should (at least if you get the right files) be easier to install.

Assuming that I get it all running, my only issue is that the Ignite Realtime site is a bit confusing with a lot of the instructions being fragmented and having to search around for the various downloads.

Once I work my way through it I'll make up a simple set of instructions. I do like the app and I'm trying to learn something about XMPP.

Call for Papers--2011 ARRL/TAPR Digital Communications Conference
Posted by: "Ford, Steve, WB8IMY" sford@... wb8imy
Date: Wed Jun 8, 2011 6:08 am ((PDT))

Technical papers are solicited for presentation at the 30th Annual ARRL and TAPR Digital Communications Conference to be held September 16-18, 2011 in Baltimore, Maryland. These papers will also be published in the Conference Proceedings (you do NOT need to attend the conference to have your paper included in the Proceedings). The submission deadline is July 31, 2011. Please send papers to:

Maty Weinberg
ARRL
225 Main St
Newington, CT 06111

or you can make your submission via e-mail to: maty@...

Papers will be published exactly as submitted and authors will retain all rights.

73 . . . Steve, WB8IMY
ARRL

WAR is the extension of a Jar intended to be used by a Java Web Server in the Java-EE environment. Sounds like a web server or client software is seeing the "PK" header on the file and suggesting a name..

2230. Car weighted flag pole bases - order deadline

Yahoo group: DAWG-HSMM
Date: 2011-07-12 16:57:36 UTC
From: Todd Caldwell
Topic: 2230 Message: 2230

(Sorry if this is a repeat. The first attempt never came through here.)

Hi folks,

We've got enough mounts spoken for (14 so far) to get the lowest price, so I think I'll go ahead and get an order out before this grows too far. If there's more interest, someone else will have to pick that up. :)

My plan at present is to make this Wednesday (July 13, 2011) at noon the cutoff. Please let me know by then if you want one ordered. I'll post a list of all the requests I've had on Tuesday evening and a follow up after I place the order. At that time I'll post the final cost per unit - $23.00 + (total shipping / number ordered).

Thanks and 73's

Todd Caldwell - K5SLR

2231. Re: Openfire Spark for HSMM (Redfire Plug In)

Yahoo group: DAWG-HSMM
Date: 2011-07-12 17:02:43 UTC
From: kb1tce
Topic: 2200 Message: 2231

I got it running. It turned out that I had grabbed the .war file for the older revs of Openfire. I'm running 3.7.0 (latest) so it just didn't work.

I deleted the old .war file from Openfire along with the Redfire folder, plunked in the correct .war and restarted. It all works fine now in the screenshare mode. Next I will attach a video camera.

Nice application.

2232. Re: [DAWG-HSMM] Fwd: Call for Papers--2011 ARRL/TAPR Digital Communications Conference

Yahoo group: DAWG-HSMM
Date: 2011-07-12 18:42:19 UTC
From: Kipton Moravec
Topic: 2228 Message: 2232

I am not sure why this was posted to our list. Is TAPR relevant anymore?

I checked out the kits and it seems like half of their kits listed on the website are "discontinued".

There is almost nothing left for APRS or packet.

There is a SDR kit, but that is about it.

It looks like most what they do is the conferences.

The TAPR conference proceedings seems to be the best bang for the buck in ham publications these days... It was surprising how much stuff was going on out there.

Just 'cause they don't do many kits like they used to doesn't make TAPR irrelevant. HSMM (not necessarily -MESH) is spoke there and at the conferences. They are very much into 'digital'.

Maybe one of these days Amateur Radio will be brought into the 21st century... kicking and screaming (more likely, whining and crying).

And maybe the ARRL and TAPR will pinch themselves and realize hams look to them as leaders.... Though I personally am not sure why.

As to why that was posted here... you'll have to excuse Mark. This is what he does. Sort of like a self-appointed internet bulletin manager.

2236. Re: [Austin_HSMM_Development] VoIP in general

Yahoo group: DAWG-HSMM
Date: 2011-07-16 15:47:45 UTC
From: Patrick Soileau ND5C
Topic: 2236 Message: 2236

Todd,

Several weeks ago, Rusty and I spent a few hours one afternoon
configuring a 3CX VOIP switch on an Acer Aspire laptop, along
with three (3) Sipura SPA-1001 ATAs for a small demo system.

Everything is setup in the DMZ.

I wanted to use the port working and put stuff behind the firewall,
but the range of ports option for forwarding is not yet available.
David AD5OO and a few others sent me the stuff to patch my
node to make it happen, but I decided to wait until the release
of 0.4.2 in which this feature would be incorporated.

David also suggested that it'd be better to leave the VOIP ATAs
in the DMZ as some protocols do not do so well with NAT, so
I figured I'd just leave things as are for now.

If you'd like, I'd be happy to drag all that stuff out and show you
what we've done. :)

That will be helpful Rusty, although not nearly so much as actual
documentation would be.

Unfortunately the demo is today. Guess the Extended Demo will be next
time. :)

Thanks.

Most likely will see you Tuesday.

Todd

2237. Flagpole base order has been sent

Yahoo group: DAWG-HSMM
Date: 2011-07-16 22:05:27 UTC
From: Todd Caldwell
Topic: 2237 Message: 2237

Hi all,

I placed the order this afternoon.

I have ordered flagpole bases for the following folks in the indicated quantities:

Andy Carstarphen WY5V 1
Craig KV5E 1
Patrick Soileau ND5C 3
John Simonton AE5KW 1
Ron Abraham KC5IMJ 2
Warren Moxley K5WGM 1
Doug Kilgore KD5OUG 1
Brady Pamplin 1
Chuck Calhoun KF5GTC 1
Ross Terry K5SRT 3

More details on price / payment / etc will follow in individual emails.

Todd Caldwell - K5SLR

2238. Unidentified Linksys Router

Yahoo group: DAWG-HSMM
Date: 2011-07-17 03:10:14 UTC
From: Kilgore
Topic: 2238 Message: 2238

I picked up a used Linksys router the other day. The outside of the case says
WRT54G V1.1 Ser No CDF20C850881. mac
000C41755A7A

The case had been opened. The board on inside has label
Ser No CFB0-54110700 R10
WO-111111390 19817

I reset it to factory and reboot and it comes up
WRT54GS mac 000C41755A7B (one letter
different)
Firmware: *v4.71.1, Hyperwrt 2.1b1 + Thibor15c [May 12 2006]*

The processor is Broadcom BCM4702KPB. There's another chip ADM6996.
Power chip is AC1501-33 (that's a DC-DC converter)

I tried to locate the model number for CFB0 but I didn't find it?

I guess someone has swapped boards.

What do I really have?

Doug

2239. rootenna

Yahoo group: DAWG-HSMM
Date: 2011-07-17 03:35:06 UTC
From: jeff
Topic: 2239 Message: 2239

I see that N5OOM and the Irving ARC used the 19db Rootenna. After doing so would you still recomend this antenna? Would you add a second antenna to the mix? I read that there was some work with aiming the antennas. I have four routers that I would like to set up in the North Richland Hills area, but antenna vs cost could be a problem. I am looking at the 15db Rootenna.
Thanks,
Jeff

I like both of them. Which one to get depends on what you plan to do
with it.

What are you going to do with them?

What kind of range do you want?

Is this a fixed setup, or are you moving them around periodically?

I need a little more information to help with the recommendation.

Kip

The Linksys Routers with BCM4702 processor are:
WRT55AG
WRT55AG
WAP54G V1.0 and 1.1

http://www.dd-wrt.com/wiki/index.php/Supported_Devices#Linksys

All those units are 5V not 12V

ADMtek ADM6996 is a ethernet switch chip.

AC1501-33 is a 3.3V regulator, which can go to 45V input. So it may not
be a 5V input part.

I could not find anything about CFB0- either.

2242. Bi-Quad antenna coax

Yahoo group: DAWG-HSMM
Date: 2011-07-17 20:15:02 UTC
From: icra@galaxynet.com
Topic: 2242 Message: 2242

OK guys....got a time sensitive issue I am dealing with

Trying to get a couple routers set up for internet access at an event on the 22nd

Building a Bi-Quad antenna to feed an old Primestar dish....due to time issues, can not wait
for good coax

Was going to strip the dielectric/center out of some RG-6 coax and slide it inside brass tube
between the router and antenna (kind of turning it into hard line)

Anyone know how bad the SWR will get messed up running about 9" of 75ohm feed line to the antenna?

Mel
N7OKL

2243. Re: [DAWG-HSMM] Bi-Quad antenna coax

Yahoo group: DAWG-HSMM
Date: 2011-07-17 22:25:38 UTC
From: Rusty Haddock
Topic: 2242 Message: 2243

Mel,
Unless I've messed up my calculations, 9" is almost two full wavelengths at 2.4-GHz. If the RG-6 is very good quality (velocity factor around ~0.9 or better) I suspect it won't hurt too much. If the cable is from RadioShack... may Heaven help you!

Then again, you really don't have much choice do ya? Crappy SWR's or nothing at all...

Rotsa ruck!

Fixed setup in the four corners of NRH. Also looking for one Omni antenna for the center of the city and use the Rootenna in the four corners and outside diameter of the city. We would add fixed stations as each club member would come aboard. Make it where we could setup a portable or maybe a mobile mesh with cameras any where in the city for weather, bike rides or runs.
Thanks,
Jeff

Not that familiar with NRH but altitude is your friend. For long distance you need to get way above the trees and buildings.

What is the range in miles you are looking for?

9" was just a guess....will be just long enough to mount the antenna on the dish and still leave
room to access the power/network cables

At least I will not be getting it from Radio Shack...but will be off a Dish Network set up

Will replace it with some good stuff after this event...wish I knew that I would be trying to do
this a month ago so it would be done right the first time and have more testing time

My plan is a dish with Bi-Quad feed on one end and a Double Bi-Quad on the other end.
Think the path can be covered with just a couple Bi-Quads, but with as much rain as we get around here, more is better and might even build and test 2 dishs if I have time

At least it is just a point to point set up and not a full blown network.....

Will give it a shot and see if it works

2248. Digital Tuesday tomorrow!

Yahoo group: DAWG-HSMM
Date: 2011-07-18 19:00:38 UTC
From: Rusty Haddock
Topic: 2248 Message: 2248

Yes! You knew it was coming. This hasn't been the only announcement!
OK, so the others didn't have an agenda but it's that time again!

Tuesday July 19th!
7pm at 299 Connor Rd, Lucas, TX
Follow the driveway to the back gate and to the pool house.
We don't mind early arrivals especially if they're from Ft Worth. :-)

Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

Tomorrow's lineup looks like this:

o NAT -- How to punch wide holes in the firewall manually!
o Demo the Mesh Tunnelling that's being worked on in Austin.
o To Meet or Not To Meet -- That's the question.
Is twice a month too much fun?
o Ready for the Plano Balloon Fest?
o Where To Now? Yes, more mesh stuff but what about other digi modes?
o Wanna build a TNC-X?

So we've kinda gotta full card for tomorrow.
Come and join us at the pool house!

Rusty,

After receiving an e-mail from Todd Caldwell K5SLR, I'm going to
bring the setup that we put together for the 3CX VOIP system so
that he can look at it.

Regarding the "Build a TNC-X" idea, I'd have to vote "nay."

The HSMM-MESH is *useless* as an emergency communications
system *unless* we have at least a few nodes deployed on water
towers to provide some type of "wide area" coverage.

My thinking here is we need to focus on getting this project to some
type of usable state before even talking about starting anything else.

Thanks Patrick. I look forward to seeing your setup.

If I can make a bit more progress on it tonight, I'll bring my asterisk server and a few of my phones.

As for where we're going, I'd have to agree that we need to focus for now at least on getting into a more usable state with HSMM-MESH deployment. Both in a more wide coverage nodes deployed sense, and in the sense of having a more visible, communications oriented set of demos to share with our fellow hams. Those of us that are somewhat network aware understand the potential usefulness of the system. We need a set of demos for those that are not so network oriented though.

The tunneling system is another very useful, but somewhat obscure sort of deal. It'll be great for development and testing, but for emergency communications, maybe not so much. Most will see it as "oh - you can talk over the internet." Nothing real new there. Much more impact if it's all ham and all RF. Not to belittle it of course. It'll be handy even between here and Plano until we can get more RF links up.

I believe interest in HSMM is picking up a bit here in Mesquite. I have a configuration problem I'd like to discuss regarding a potential multi-node install on the big tower here. A batch of cables arrived today, so I should be able to start constructing the enclosures soon, but I still have concerns about how to manage updates without having to send someone up the tower every time.

See you all tomorrow,

Todd Caldwell - K5SLR

With Version 4, if there is one node on the network with Internet
access, and if you can log into it over the air, you can update it. It
is very easy now.

With all the VOIP interest, I guess I will throw in my 2 cents. I would be interested in seeing what everyone is doing with their VOIP setups, and some of the ideas on how best to implement them. I too have a box that I finally got up and running a couple of days ago to plug in to my mesh that is running Asterisk and Openfire. I will bring that out tomorrow to go along with everyone else's show and tell.

On a side note, has anyone played with the Asterisk-IM plugin for Openfire? I am curious to start playing with it now that I have the box up and running, but wanted to know if anyone else had started down that road yet...

Updating a single node is not a problem.

However, we'd like to connect all the nodes to a switch via wired ethernet. We have a 5.8 GHz backhaul system that will get us to the nodes even if the mesh side is not working. This works well for the single node we have up at present. Dave - AD5OO - gave me some pointers for v 0.3.3, but I haven't heard if they will still work or not. I had initially though I needed the nodes to bridge across the LAN connection, but I'm thinking the RF links may be enough for that part now. LAN side access is still a much desired feature though.

The update issue may all be just a matter of managing the order of operations carefully. Set all the nodes LAN addresses to something other than 172.27.0.1, then update the first one, let it finish, re-supply callsign, then reset the LAN address - again to something other than 172.27.0.1, and proceed to the next one.

We do plan to attach the factory antennas to the spare port on each node, hopefully to enable them to communicate with each other via RF, but we have learned that there are times when the RF side locks up and a LAN connection is needed to recover the node. Rather inconvenient when the nodes are at 430 Ft AGL.

If we can get the nodes to work together on the wired LAN, we may have a way to get a fiber connection down to ground level. If that works out, I think we'll put a regular wifi access point in the ground level radio room. That'll give us another level of redundancy. It may also allow us to put a VoIP server there at ground level as well. That will require resolving the NAT problems I think.

Todd

In addition, my 2 cents about VoIP

In Spain we are development a network called guifi.net (http://guifi.net), and we have a lot of Asterisk Servers with a central server with Kamailio. All the network has and extension like 70XXXXXXX.

You can take a look, a project called Blink and Sylkserver, there a very strong open source solution for communications (IM, Video, and Audio). If you are interested you can try it in Sip2sip (*sip2sip*.info)

If I can help, in the VoIP infraestructure from here, here I am.
Best Regards

If you are new to Ubuntu, I would recommend staying with the Long Term
Releases or use 10.04 LTS. It is very stable, and is supported longer
than 11.04 will be.

2260. VoIP phones and such we discussed at the meeting

Yahoo group: DAWG-HSMM
Date: 2011-07-20 19:40:34 UTC
From: Todd Caldwell
Topic: 2260 Message: 2260

Hi folks,

I checked my records and I had misremembered which store I got my VoIP phones.

Turns out it was actually http://www.telephonydepot.com/

Here's the GrandStream GXP280 ($37.20) :
http://www.telephonydepot.com/Grandstream-GXP-280

And it's PoE capable cousin, the GXP285 ($43.20) :
http://www.telephonydepot.com/Grandstream-GXP285

Also, the Asterisk install I've been working with is PBX in a Flash.

See here for the software : http://pbxinaflash.net/

and here for a walk thru of the installation:
http://nerdvittles.com/index.php?p=740

A further warning - this software will format the drives of whatever machine you run it on. You do have to give it the go-ahead before it starts, but read the screens carefully. DO NOT attempt to install it along side other software. It doesn't work that way unless you're using some sort of virtualization package.

Finally here's the 15 dB Omni we talked about :
http://www.titanwirelessonline.com/2-4GHz-15dBi-Omni-p/at-15om-24.htm

73's

Todd Caldwell - K5SLR

2261. Oops - GXP285 is 48VDC 802.3af PoE

Yahoo group: DAWG-HSMM
Date: 2011-07-20 20:23:39 UTC
From: Todd Caldwell
Topic: 2261 Message: 2261

I mentioned this phone in my summary email because I'd been asked if the GXP280 was PoE capable last night.

This one is :

GXP285 ($43.20) : http://www.telephonydepot.com/Grandstream-GXP285

BUT - it's the expensive sort of PoE that requires a rather smart power supply.

If PoE is something you want, one of the simple injectors we've looked at plus a regulator down to 5VDC would probably be the way to go.

As usual, if using the simple PoE schemes, pay attention. The fancy version will save you from shorts and such. The cheap one, not so much.

I would be check this antenna carefully. We have seen similar antennas and the boom is, much, much to large in relation to the "active" elements to work well. The problem seems to come from an effort to use the same boom from lower frequency antennas (larger active elements) and translate the design to a higher frequency. The elements of the antenna have been reduced, but not the relative size of the boom. Much of the length of the elements is inside the boom.

Three of us here in Austin have antennas that look much the same and the antennas are not directional at all.

If it works well let folks know. If the actual antenna looks different than the one shown, please include a photo of what the antenna actually looks like.

Best of luck.

Topic: 2062 Message: 2264

Glenn,

Well, I think I can wait for Noel (N2OEL) to get his and then decide to order if it is decent.

I can check the directionality very easily.

Thanks & 73,

Gordon Beattie, W2TTT

201.314.6964

I would be check this antenna carefully. We have seen similar antennas and the boom is, much, much to large in relation to the "active" elements to work well. The problem seems to come from an effort to use the same boom from lower frequency antennas (larger active elements) and translate the design to a higher frequency. The elements of the antenna have been reduced, but not the relative size of the boom. Much of the length of the elements is inside the boom.

Three of us here in Austin have antennas that look much the same and the antennas are not directional at all.

If it works well let folks know. If the actual antenna looks different than the one shown, please include a photo of what the antenna actually looks like.

Best of luck.

-Glenn

Fine business. I would love for folks to get good deals on gear, but hate to see folks selling stuff that does not work.
Similar 2.4 GHz antennas with similar spacing of the elements and number of elements, claim 15 not 20 dB gain.

Testing was easy. We hooked it up and it made no difference at all what direction my sample was aimed.

The MFJ 1800 is a roughly similar antenna. I have several and electrically / RF wise they work very well. But they are mechanically flimsy and really need to be put in a radome tube so they don't wiggle in the wind like a leaf.

So I found a similar antenna with a beefy boom that was plenty sturdy, but quickly realized it was stout, but did not radiate well. One would hope there would be a low cost blend that was mechanically solid - and work well for the intended purpose.

Here is a link to the MFJ - works well - we have done links of over 10 miles with no amps using and WRT54G hardware. But they must have some sort of mechanical support added, that does not detract from the electrical characteristics.
<http://www.hamradio.com/detail.cfm?pid=H0-008216>

Let folks know what you find.

Did you check that shipping cost? Nearly ninety bucks! It makes the "deal", not such a "deal"!

2268. Re: VoIP phones and such we discussed at the meeting

Yahoo group: DAWG-HSMM
Date: 2011-07-23 19:39:33 UTC
From: ae5lc
Topic: 2260 Message: 2268

Hi Todd,
Last tuesday was my first Digital-Tuesday meeting, I thought it was great.

To continue with my MESH activity, I'd like to load a client sip phone on my Notebook, are there any good ones that you know of? If you don't have a recommendation, I think I'll try BLINK. Any thouhgts?

Do you know if there's a VOIP server somewhere, such that I can test out my client installation? (I can just leave a voicemail or something). Can I access your Astrisk server across the internet? (through VPN or something?).

I have my second Linksys router on the way, so when it gets here I'll try to set up a 2 node MESH at home with PBX-in-a-FLASH on one of the nodes.

Thanks & best regards,
Robert Speckmann AE5LC

From: Todd Caldwell
Topic: 2260 Message: 2269

Hi Robert,

I haven't used it much myself yet, but a friend - KD5QLN - who installs VoIP systems recommends the 3CX soft phone.

See http://www.3cx.com/VOIP/voip-phone.html

My server is not configured for outside access at present.

You could try the following:

Set up your mesh node with the internet gateway enabled.
Connect your server machine to one of the LAN ports.
Change the "Nat" setting on your node to "5 DMZ ports" and reboot the node.
log back in and go to DHCP and Port Forwarding.
Add a DHCP reservation for the server. For convinience, name it PBX, or perhaps PBX-AE5LC

This should leave you with your server machine having a 10.x.x.x IP address. This is on the mesh side of the node's firewall.

Connect the node's WAN port to your network - ie to the internet.
I recommend this connection be behind a firewall.

Now install PBX in a Flash. This will let the install scripts see the correct address for your PBX. It's easier this way than changing it in numerous places after a conventional install to adjust for the mesh node's DMZ address.

Once the install is complete - it will take quite a while since PBX in a Flash builds all the software from source - you can experiment with it by adding a DHCP reservation for your notebook, and connecting it to another of your mesh node's LAN ports.

There is documentation on adding extensions in PiaF, and I expect there is config information along with the 3CX phone as well.

Once PiaF recognizes the phone, you should be able to leave yourself voicemail on your own server. I believe *97 is the loopback extension as well. That let's you talk to yourself. :)

Hopefully that will get you started.

2271. Re: VoIP phones and such we discussed at the meeting

Yahoo group: DAWG-HSMM
Date: 2011-07-24 06:04:17 UTC
From: ae5lc
Topic: 2260 Message: 2271

Thanks Todd, Great info.

I still have to get up more on the learning-curve, but after I drew myself a picture, I realized that I can do what you're saying with just 1 MESH node, so I don't have to wait for my 2nd LinkSys Router to arrive.

Unfortunately, PiaF wouldn't load in my old ThinkPad (something propietaty in the SMBus EEPROM), so I need to find another guinea pig PC before I can try it (too bad PiaF can't create it's own partition like ubuntu does).

With any luck, I'll make some progress before the next Digital-Tuesday meeting, so I can ask you any questions that I might have :-)

Thanks & best regards,
Robert Speckmann AE5LC

2272. WRT54Gv2 HSMM?

Yahoo group: DAWG-HSMM
Date: 2011-07-25 03:29:38 UTC
From: Floyd Rodgers
Topic: 2248 Message: 2272

I can't seem to easily fond the HSMM main page, so I'll ask here. Is the Linksys WRT54Gv2 any usable with HSMM?
If not, can anyone give me pointers on doing a factory reflash on this unit. It seems a bit confused in it's current condition.

2273. WRT54G2v1 HSMM?

Yahoo group: DAWG-HSMM
Date: 2011-07-25 03:38:05 UTC
From: Floyd Rodgers
Topic: 2248 Message: 2273

revised the model number, I should have looked closer before hitting
send.....

Yes a WRT54G V2 is supported.

The main HSMM page you are looking for is http://www.HSMM-MESH.org

Please explain what you mean by confused. I have no idea what that
means.

The other option is to bring it to the next Digital Tuesday and we will
get it working for you.

Sorry, it's actually a wrt54g2 v1. Confused means it appears to be transmitting a wifi signal, but I can't seem to get connected to it. On the wired side, net link lights look ok, but no dhcp. Doesn't respond to its normal config address either even after a hard reset.

The WRT54G2 V 1 has 2 MB of Flash. That is not enough for HSMM-MESH. You need 4 MB (or more)

Sorry.

I wonder if the possible directivity issues would be from feed line coupling rather than improper boom length. Ive build hand held 430 MHz yagis and seen huge pattern differences just by more careful feed line placement and choking. This is why baluns are used on Hf antennas too.

> 201.314.6964
> I would be check this antenna carefully. We have seen similar antennas and the boom is, much, much to large in relation to the "active" elements to work well. The problem seems to come from an effort to use the same boom from lower frequency antennas (larger active elements) and translate the design to a higher frequency. The elements of the antenna have been reduced, but not the relative size of the boom. Much of the length of the elements is inside the boom.

2278. VoIP phones and such we discussed at the meeting

Yahoo group: DAWG-HSMM
Date: 2011-07-20 05:53:45 UTC
From: Todd Caldwell
Topic: 2260 Message: 2278

Hi folks,

I checked my records and I had misremembered which store I got my
VoIP phones.

Turns out it was actually http://www.telephonydepot.com/

Here's the GrandStream GXP280 ($37.20) :
http://www.telephonydepot.com/Grandstream-GXP-280
And it's PoE capable cousin, the GXP285 ($43.20) :
http://www.telephonydepot.com/Grandstream-GXP285

Also, the Asterisk install I've been working with is PBX in a Flash.

See here for the software : http://pbxinaflash.net/

and here for a walk thru of the installation:
http://nerdvittles.com/index.php?p=740

A further warning - this software will format the drives of whatever
machine you run it on. You do have to give it the go-ahead before it
starts, but read the screens carefully. DO NOT attempt to install it
along side other software. It doesn't work that way unless you're
using some sort of virtualization package.

Finally here's the 15 dB Omni we talked about :
http://www.titanwirelessonline.com/2-4GHz-15dBi-Omni-p/at-15om-24.htm

If you want to spend that much you would be better off getting a 15 db
Rootenna.

http://www.titanwirelessonline.com/PacWireless-2-4GHz-15dBi-RooTenna-p/at-24gh.htm

It includes a waterproof housing and your cable from router to antenna
is 6" so you do not suffer a lot of cable loss.

2280. RE: [Bulk] [DAWG-HSMM] Re: Flag pole car mounts

Yahoo group: DAWG-HSMM
Date: 2011-07-09 21:06:20 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2220 Message: 2280

Guys,

Depending on what you want to put up, you might consider either a large pipe flange and a short bit of threaded pipe (nipple) bolted to a plate or board or a Speed-Rail flange bolted to a plate or board.

Of course if any of these is too light-weight, then you can just have something welded up for you!

:-)

Thanks & 73,

Gordon Beattie, W2TTT

Todd,

I'd like to get one and possibly a couple of people from the Rockwell Collins Amature Radio club in Richardson TX have been talking about getting the bases and then the poles (I could check with them).

I used one during the Wild Ride (Thanks Doug) and it worked great (has been returned).

If you need to place the order soon just get me two. Please let me know how the price and shipping works out. When do you think you might order?

From: Todd Caldwell
Topic: 2062 Message: 2283

Depends on the gain, Mike.

Data for the 14 dB Rootenna 14:
http://www.fab-corp.com/pdf/rootenna.pdf
35 deg E-plane, 36 deg H-plane - at the 3 dB points

Data for the 19 dB Rootenna:
http://www.fab-corp.com/pdf/r2t24-19.pdf
19 deg E-plane, 16 deg H-plane - at the 3 dB points

The Pac Wireless PAWES24-14 that Mike recommended:
http://www.balticnetworks.com/docs/pawes24_data_sheet-v2.pdf
26 deg (plane not specified) at the 3 dB points.
But take a look at the plot. The specified beamwidth doesn't tell the
whole story. There's a lot of energy off to the sides.

The Rootenna is a better choice. Especially considering it has a
waterproof case built in for the radio.
And if the 14 dB version is not enough gain, step up to the 19 dB
version - and be prepared for it to be hard to aim. :)

Sent: Monday, August 1, 2011 4:11 PM
Subject: Public Service Op - Aug 21 (half day)

Hello Andy,

A non-profit organization is sponsoring a mini-triathlon at Lake Tawakoni on Sunday, Aug 21 for ~250 racers. Several weeks ago, they sent e-mail letters requesting assistance to more than a dozen ham radio clubs on the east side of the Metroplex, and got ZERO replies. This isn't zero as in "sorry, we can't", but zero as in no letters back from anyone -- period.

A ham friend of mine suggested contacting Dallas RACES for help.

The race organizers need 12-15 hams for half a day (7:00 am - noon) on the 21st. That's all. Hams will be at various checkpoints to provide the usual "just in case" communications. It's especially needed from this area as cell phone coverage is extremely spotty at best - and in some cases - nil.

Power for a VHF/UHF base station could be provided by my solar trailer (sine wave inverters). I've got 120Vac and 12Vdc at the trailer, but no antennas (yet). I also have a limited quantity of portable solar DC available for remote recharging of hand-helds (lighter-plug adapters). I'm not sufficiently familiar with that area to know how well (or poorly) repeaters cover the region, but I suspect HTs are all that would be needed, as I'm presuming communication would be point-to-point.

Race info is here:
http://www.bigearthracing.com/event-spring-fall-classic.php

Info on my solar trailer is here:
http://www.txses.org/NTREG/projects.htm

Thoughts/comments/feedback sincerely appreciated.

Thanks.

Dan

If you want the camera "advertised" on the mesh, an IP wired would be
the "best". Plug it into one of your node's LAN ports, and use the port
forwarding page in Setup to have an IP address reserved for your camera
and the "advertising" setup as well.

Sure Bill.

Advertising can tell the mesh that a given node has a service. This service could be something like a web server, a mail server, a file server, or a camera; just whatever you'd want to attach to a network and allow people (or your computer) to use. The advertisement will show up on the "Mesh Status" web page of all the nodes within a mesh. It will be listed next to the node providing that service. Notice the "Services" column for the Local Hosts, Remote Hosts, and Current Neighbors lists on the mesh status page.

Most of the time, what's advertised will be a link that you can click on in your web browser to access. Other times it may be a service that can't be accessed with a web browser but another program on your computer can use. This might be something like a GPS that can provide your computer with the current time. In that case, no link will be provide but, at least you know it's there to configure your NTP daemon (Network Time Protocol) to access.

OK, let's say I have an IP Camera attached to one of the LAN ports on a mesh node and I'd like the rest of the mesh to know about it. Provided that the camera is powered up and ethernet'd into the node, it will probably ask the node for an IP address. Naturally, this will be invisible to you. If it doesn't then the static IP address of the camera will need to be in the range of addresses used by the LAN ports, 172.27.0.* but not by the DHCP server (e.g. 172.27.0.26 to 172.27.0.254). Naturally, the node's exact configuration may vary but these are the default numbers.

Now, point your browser to the node's webpage (e.g. 10.4.59.73:8080) and then go to the "Setup" page and then to the "Port Forwarding, DHCP, and Services" page.

We need to first reserve an address in the DHCP server if the camera is using DHCP. If not, we can skip this step. Select the IP Address of the camera in the pull down selection box under "DHCP Address Reservations". If the camera provides a hostname when it requests an IP address, the hostname will show up there amongst the IP addresses. If no hostname is present then enter a hostname to the left of the IP address that your camera will be known by to the rest of the mesh. Select it and then hit the [ADD] button just to the right. We do this so that each time the camera is powered up or plugged into the node it will always get

the same IP address so that the port forwarding is greatly simplified.

OK, I've mentioned port forwarding -- that's our next step. For this example we will be forwarding port 12345 on the WiFi side of our node to port 80 of our camera. Your mileage may vary. If no other host on the node's LAN ports is registered to use (or will be using) port 80, feel free to use it instead of port 12345. The web server for the node itself is 8080 so don't use that one either. It's best to pick a port well above port numbers used by services provided by the mesh node. The highest port number you can use is 65535.

Under "Port Forwarding" we'll leave the "Interface" at Wifi and the "Type" at TCP. If this node is attached to another network via the WAN port you might want to forward connections from there, the WiFi , or both. Select accordingly. As for "Type" you can select TCP, UDP, or Both depending on the protocol used by your device. Most, if not all cameras, operate using TCP only. Again, select accordingly.

Enter '12345' into the "Outside Port" box, select the LAN IP address of your camera, and enter the LAN Port (the TCP port your camera uses, usually port 80), and click on the [Add] button just to the right of the "LAN Port" box. Another set of input boxes should appear below your entry if everything was accepted.

Leave the DMZ Server set to None as that is another, yet similar, tutorial.

Under "Advertised Services" enter a name for your service, say something like "Bills Camera". It's a description of the service you're offering. Next there's a checkbox that indicates a clickable link should be displayed for this service. For something that a browser can view, it's best to check that box.

After that is the URL protocol, typically http: or something like ftp: for an FTP server or smb: for a Windows Share folder. Now all browsers understand the smb: protocol but many can be made to do it but it's extra work and browser specific. For our IP camera enter "http". Oh, if the service is something like a GPS providing time and date information, there's no way to link to that so... the Link box and what's beyond are basically moot and there's no need to fill in the remainder of the input boxes.

The port number needs to be filled in for a link, even if you use http: as the protocol and you're forwarding the same port that the camera uses. In our example here enter "12345" as this is the port as seen from the WiFi or WAN ports.

The next box is for the case where the URL needs a more specific path. Generally for web or file servers but not in this example. An example would be something like smb://ae5ae-files/pet_pictures

Now click on the [Add] button and another set of input boxes will appear.

If everything looks correct now click on the [Save Changes] button near the top of the page. Yes, we'd like to make these settings active and save them across reboots.

Within a minute or so you can check the Mesh Status page of any node on your mesh and see the service you just defined right next to the mesh node to which you added the service (e.g. Bills Camera). For the camera there is a clickable link that will your browser straight to your camera's web interface.

You now be done! Your camera is accessible across your mess, er.. mesh.

Bill, try these instructions on for size and lemme know how it goes.
I'll see about putting these on the HSMM-MESH website.

Minor correction -- hostname will not used by the rest of the mesh.
Ignore that statement. I'm thinking DMZ and this was not about putting
a host into the DMZ. Sorry.

Is this something DAWG-HSMM specific or a standard part of the existing Mesh software? Is the advertising of the resources coming from the devices (like the camera) or is it configured in the hosting Mesh Node? Similarly, is the web page being generated part of the MESH system or some other tool?

Bonjour and/or Avanti?

Are any special techniques being used to get the resource advertisements to flood the mesh system or do they stay at each node?

This is a very valuable feature needed to show what's available on the system. I've been researching it and even to the point of setting up some APRS packets to broadcast the resources. A real IP solution would certainly be a good thing to have a handle on.

Standard part of the existing HSMM-MESH firmware. The DAWG (Dallas Area Working Group) does not maintain any mesh software.

>Is the advertising of the resources coming
>from the devices (like the camera) or is it configured in the hosting
>Mesh Node?

The hosting Mesh node.

>Similarly, is the web page being generated part of the MESH system or
>some other tool?

Bill, have you looked at the webpages on a mesh node???
The webpage is generated as part of the HSMM-MESH firmware; it's the mesh status page.

>Bonjour and/or Avanti?

Neither.

>Are any special techniques being used to get the resource
>advertisements to flood the mesh system or do they stay at each node?

No special technique -- the OLSR software sends the list of services around the mesh.

Sorry for the late agenda. Kip's been having A/C problems at home and I've been, well... having problems. Anyhoot, plans for tonight are to re-re-visit the tunnel to Austin. We'll also hook up Kip's Linux box/server and show again how to make it accessible from the mesh.

If anyone has IP phones or cameras, by all means, bring 'em with U!!!

It looks to be a teach-and-play night!

Come and join us! Same Bat Time, Same Bat Channel!

Darrell Null wrote:
>Any way this could be broadcast over the internet or via a tunnel?

I'm sure there is but our tunnel connection hasn't stayed up long enough for that to be a viable option. Also, I don't have the equipment for decent audio or video recording nor do I know a way to broadcast this on the 'net, even with crappy A/V.

Honestly, even if I had the equipment and the means to stream our meetings over the 'net, I'm not really sure that I'd want to put that kinda effort into making a worth while production. Kip and I are already trying to run a meeting of sorts as well as try to keep this bunch of goofballs* corraled. :-) It doesn't always work but we do have a good time!

I'm sorry if you can't attend but, for the time being Darrell, you'll either have to show up at the meetings or... don't.

They had a MESH router on last years balloon. I believe they were able to maintain a good connection beyond 60,000 ft.

I will be pointing my node in that direction... We'll see if I can hear it from Northwest Houston.

Just wondering if a couple people using things like these:
http://people.wallawalla.edu/~Rob.Frohne/Airport/Primestar/Primestar.html could
do a networked qso over a few states with a wifi ap on a near-space balloon.
Maybe through some sort of irc server running on the AP. Or better,
sip-phone to sip-phone. :)

I don't know how these things usually go. The page you linked said streaming
video and data. Is there some sort of one-way protocol in play?

The 30th Annual

ARRL and TAPR Digital Communications Conference
September 16-18, 2011 - Baltimore, MD
http://www.tapr.org/dcc

- -

Final preparations are being made for the 30th Annual ARRL and TAPR Digital Communications Conference. Are you ready? Here's a check list to help you out:

Check List:
- Have you booked your travel?
- Have you booked your hotel room? (see below for special rates and deadline)
- Have you registered for the DCC? Go to http://www.tapr.org/dcc to sign up.

Below is the list of submitted papers. The speakers schedule is being assembled. We have a an exciting list of paper talks, guest speakers, and Introductory Seminars.

- -

Hotel:

Four Points by Sheraton BWI Airport, Baltimore, MD.

A block of rooms at the special DCC room rate of $90.00 single/double. This special rate is good until August 25, 2011 after that you will pay the regular room rate. To book your room, use the reservation link below or call the hotel directly (phone numbers below) and mention the group code DCC (Digital Communications Conference) when making reservations. Be sure to book your rooms early!

Four Points by Sheraton BWI Airport
7032 Elm Road
Baltimore, Maryland 21240
Reservations: 1-800-368-7764 Phone: 410-859-3300

- -

Submitted Papers:

DATV-express: A Lower Cost Approach to DATV
Charles Brain, G4GUO and Ken Konechy, W6HHC

A Shadow Ad-Hoc TEMPn-N Network
Bob Bruninga, WB4APR

CW Mode for the NUE-PSK Digital Modem
Dave Collins, AD7JT and George Heron, N2APB

APRS and the Android Smartphone
Sagar Gupta, KC2VSG

Practical Implementations of Bluetooth in Microcontroller Circuits
John A. Hansen, Ph.D. W2FS

Public Service Event APRS Web Mapping for Wireless Devices
Ted Jacobson, W8KVK and Rob Jacobson, KB9AFT

WRC-12 Agenda Item 1.19: Regulatory Considerations for Software Defined and Cognitive Radio Systems
Brennan Price, N4QX

More experiments with Delay and Disruption Tolerant Networking over AX.25 Networks
John Ronan, EI7IG, Darren Long, GØHHW and Kristian Walsh

A Further Comparison of Different TCP/IP and DTN Protocols over the D-STAR Digital Data Mode
John Ronan, EI7IG and Cathal O'Connor

Codec 2 – Open Source Speech Coding at 2400 bit/s and Below
David Rowe, VK5DGR

PhoneSat: Balloon Testing Results
Mike Safyan

Modulation – Demodulation Software Radio (MDSR) Software for the BiLiF computer interface
Alex Schwarz, VE7DXW

- -

Introductory Talks (Saturday):

Introduction to Digital Voice
Introduction to Digital Modes
Introduction to D-STAR Digital Voice & Data

- -

Demo Room:

Be sure to bring your projects to show in the demo room. Even if you are not speaking. Each year at the DCC a separate (and lockable) room is provided for people to bring and show off their latest projects. Tables and power will be provided. Bring your equipment and display for all to see, learn, and ask questions about. Be sure to bring a small sign and/or flyer naming and describing your project.

- -

Saturday Night Banquet Speaker:

The Village TELCO
David Rowe, VK5DGR

There are now billions of mobile phones all over the world. However in many developing countries, mobile phones are simply too expensive to use. For example, in a country where people earn $1.50/day, a phone call can cost 21 cents/minute. This is a huge tax on communications.

David Rowe, VK5DGR, will describe how a community of people from around the world set out to fix this problem, using a mix of Wi-Fi and open source software. The result is the Village Telco - a DIY telephone company that anyone can set up.

A Village Telco is constructed from a network of "Mesh Potatoes" - small Wi-Fi boxes that are mounted on homes in a village. They form a mesh network, relaying telephone calls for each other. Each Mesh Potato connects to a regular telephone inside village homes. Phone calls on the network are free. A local person in the Village can be trained in a few hours to set up and maintain the network.

To build the Village Telco we borrowed many ideas from Ham Radio, such as sharing hardware designs and community networks.

The talk will include real world stories of how Village Telcos are helping people in several developing countries, and explain why a simple phone call that we take for granted can be so important.

- -

Sunday Seminar:

Stay tuned. We are assembling an exciting seminar. Details will be released this week.

- -

Schedule:

Friday
8:15 AM Conference Registration and Demonstration Room Open
9:00 AM Welcome and Introductions
9:30 AM Technical Presentations
Noon Lunch
1:00 PM Technical Presentations
6:00 PM Break
7:00 PM Social
11:00 PM Demonstration Room Closed

Saturday
7:15 AM Conference Registration and Demonstration Room Open
8:00 AM Welcome
8:15 AM Technical Presentations
Noon Lunch
1:00 PM Technical Presentations
3:15 PM TAPR Membership Meeting
6:00 PM Break
7:00 PM Dinner Banquet

11:00 PM Demonstration Room Closed

Sunday
8:00 AM to Noon Sunday Seminar

- -

We hope to see you there!

President TAPR

2312. HSMM-MESH version 0.4.2 Released!

Yahoo group: DAWG-HSMM
Date: 2011-08-22 06:40:59 UTC
From: Rusty Haddock
Topic: 2312 Message: 2312

On Sunday, David Rivenburg, AD5OO, announced the release of version 0.4.2 of the HSMM-MESH firmware. His announcement is below. Please note that there is a patch file available for the upgrade. A reboot will still be required but dropping out of mesh mode is not needed like when a full-blown and complete firmware upgrade is done.

To upgrade from version 0.4.1, click on the Administration tab in the Setup page. In Firmware Upgrade section of that page, click on the [Refresh] button. Naturally, this is presuming that the node you are upgrading has a path to the Internet. In the pulldown menu next to the label "Download Firmware" select the 0.4.2 patch file. Next, click on [Download] and let the fun begin!

And if it's not obvious, PLEASE perform this upgrade on a node that's readily accessible and see how things go BEFORE upgrading a REMOTE NODE!!!

Have phun!

-Rusty-

Today the 0.4.2 release of the HSMM-MESH firmware becomes a reality. Features have been added and bugs have been fixed. Below is a summary of what's changed.

- fixed the bug which prevented port forwarding a range of ports
- added a waterfall display to the signal strength page
- improved hostname resolution on multi-interface devices
- status page now displays the number of olsrd restarts and how long it has been since the last restart
- olsrd watchdog detects more error conditions
- fixed the "text page of death" on the mesh status page when olsr is not running
- swapped the columns on the mesh status page
- make the txtinfo pugin available to the LAN
- fixed a previous neighbor display bug

The 0.4.2 patch replaces some of the running programs so a reboot will happen after the patch is installed.

There are a handful of development tunnel nodes out there. The 0.4.2 patch can be applied to them without breaking the tunnel. Theoretically. If it breaks you will be entitled to a full refund! Allow six to eight weeks for processing. Seriously, it is highly recommended that the tunnel node users do the update (patch only) to take advantage of the improved olsrd handling.

Some Gotchas to watch out for...

1. This process will reset your root password back to "hsmm"
2. Some of your settings will be lost, I'm guessing all of them except the node name get overwritten.
3. The node will not connect back to the MESH until you connect direct to it and "save" the configuration.

The upgrade process goes well enough, if you understand that you will loose access to the node over the mesh. Personally this caused me a bit of trouble because I was upgrading a node that is not that easy to physically access. All in all, it took about 30 min to upgrade both nodes and figure out what the root password was.

>Some Gotchas to watch out for...

None of what you state are gotchas when loading the **PATCH** file, as
I mentioned:

"label "Download Firmware" select the 0.4.2 patch file."

BTW, the patch file in the firmware list that the system downloads
actually includes the word 'patch' in it.

Everything you've described is part of the normal firmware install.
None of these things happen when using the patch file that's on the
firmware list other than a reboot and this brings the WRT54G back to a
mesh node, not an access point. None of the files present in the patch
file could even POSSIBLY change the root password on your WRT54G.

>1. This process will reset your root password back to "hsmm"
>2. Some of your settings will be lost, I'm guessing all of them except the
>node name get overwritten.

When the entire contents of the flash memory are overwritten things like
this do happen, per the installation instructions on the HSMM-MESH.org
website.

>3. The node will not connect back to the MESH until you connect direct to
>it and "save" the configuration.

Actually, that would be MESHNODE and only after a COMPLETE firmware
update does the WRT54g revert to a standard Access Point.

Please be more careful with your warnings next time.

Rusty

Some of these update/patch problems should not be happening. Everyone should know that people are installing these nodes up on towers and other places that they are not readily accessible. Why does the password change, why won't the until go back into MESH mode Why do I lose settings.

The developmental team has promoted their great software and now people are using it. Update/Update processes need to be thought through and tested before they are released and the impact of updating/upgrading made known to users rather than having the impacts presented a couple of weeks later. A slicker update/upgrade process needs to be adopted and everyone knows they can do something like that. Look what they all have done so far.

Hmmm...

You did say "patch" option. My bad. I wonder if the user interface
mignt warn folks that loading the full image and not the patch will
cause you to have to reconfigure the whole thing.

Makes me wonder though. Why did it remember my node names if I
reloaded the whole flash?

Unfortunately, anything we could put in would not warn the folks who
are loading the full image on top of the original Linksys firmware.
Sorry, I just don't have much sympathy for folks that can't/won't read
and follow the instructions.

>Makes me wonder though. Why did it remember my node names if I
>reloaded the whole flash?

The WRT54G has a small amount of memory call NVRAM (Non-Volatile RAM).
There are a few items that are stored in the NVRAM of the unit. No,
there is not enough room for all of the configuration parameters nor is
there enough flash to store the code to restore everything back where it
should belong and deal with discrepancies between different combinations
of firmware revisions (not that any of us really wants to write that
stuff much less maintain it through umpteen future updates).

The patches (a new feature) were added to the firmware update process
to avoid this issue (amongst a few others).

> and follow the instructions.

That's great, except there is very little documentation on this thing we call HSMM-MESH and there seems to be very little sympathy from the "folks in the know". I'm sure my experience will not be unique and many will be frustrated by the same things I've had issues with.

We are going to have a lot of trouble getting folks to put up enough nodes to make this thing actually do something more than ad-hoc networks that go nowhere. And until we have enough nodes active on a regular bais the things we can do with it will be extreamly limited. We need to have enough nodes easily reached that have internet access or what's the point? This means we need folks interested in putting up nodes not frustrated trying to figure out how it all works.

I think we should do our best to answer even the stupid questions, over and over again if necessary. If we are getting frustrated by the questions, just chalk it up to the lack of understandable and easily found documentation and say shame on us.. Folks are going to be frustrated with the lack of real nodes you can actually connect to and wonder what's the point.

Let's not run them off because we don't want to answer the same question over and over....

Respectfuly

Bob

Proud operator of 2 (soon to be 3) HSMM_MESH nodes... (One that would provide High Speed internet access to any MESH I could connect to..)

2319. OLSR Signature Key Issue (Is it fixed?)

Yahoo group: DAWG-HSMM
Date: 2011-08-31 01:38:17 UTC
From: kc4uai
Topic: 2319 Message: 2319

All,

I understand that there was an issue with versions of OLSR signatures when you compiled the software for other platforms. Apparently the version of OLSR we are using on HSMM-MESH has this issue. It's not a problem if you don't try to operate cross platform (Say the WRT router and an X86 platform.)

Where can we find the development road map so we can know when we may expect to see an update of OLSR that fixes the problem?

Thanks!

-= Bob =-

>a problem if you don't try to operate cross platform (Say the WRT
>router and an X86 platform.)

Bob, you understand incorrectly. OLSR signatures were added (changed?
I forgot) in version 0.4.0 thusly making earlier versions unable to
"mesh" with 0.4.0 and above. This has not been an issue for operating
across different hardware platforms.

What you're probably referring to is the interoperability of OLSR on the
WRT54G's with OLSR running on hardware with different CPU architectures.
Again, you misunderstand. The problem is, technically, not in the OLSR
daemon, per se, but in the secure plugin used with OLSR.

Since the time that I submitted my patches for the secure plugin (around
the beginning of July) the OLSR team (olsr.org) has not made an official
release of 'olsrd' and it's associated plugins. The HSMM-MESH development
team is also not in the habit of using unreleased versions of other
groups' software. Just to be perfectly clear, the folks at OLSR.org are
not connected with the HSMM-MESH team other than the HSMM-MESH project
uses their software.

BTW, x86 and some/most ARM platforms interoperate just fine with the
WRT54G's. PowerPC, MIPS (as opposed to MIPSel), Atheros chipset-based
machines and the like do not.

>Where can we find the development road map so we can know when we
>may expect to see an update of OLSR that fixes the problem?

Not quite sure where you got the notion that the HSMM-MESH development
team has some sort of definitive road map for our work but you'd do best
to get rid of that notion. I say that because the HSMM-MESH development
team is not in the **business** of producing software and probably not
in the manner in which you're probably accustomed.

As to when a solution to the cross-platform issues will be released:
In my discussions at HAMCOM with our development lead a decision had not
been reached with regards to including a 'fixed' secure plugin for OLSR
with the HSMM-MESH firmware. If a 'fix' is released the concensus is
to provide it as part of the next major HSMM-MESH release, say 0.5.0,
because it is, shall we say, a real game changer. Keep in mind that
version 0.4.2 was just released (not that there necessarily will be

releases for 0.4.3, a 0.4.4, etc either).

Another possibility discussed was that the use of the secure plugin may be discontinued since its value is, in hindsight, somewhat questionable, and could be causing problems with related development and uses of the HSMM-MESH firmware. Discontinued use of the secure plugin would solve the cross-platform issues.

As I stated before, no firm decision has been made to my knowledge.

This is a bit misleading of a statement. There IS a problem with the OLSR packet signatures (as you discuss below) in various hardware mixes when you try to run them all on the same MESH. Yea, if you have a pile of Linksys routers you won't have an issue, but if you want to run on differant hardware platforms you may have trouble.

> What you're probably referring to is the interoperability of OLSR on the
> WRT54G's with OLSR running on hardware with different CPU architectures.

I didn't misunderstand and I never faulted OLSR daemon only the signature stuff that "secures" the packets that get passed around between the routers on the network. Which is released as an optional part of OLSR... Got that too...

> Since the time that I submitted my patches for the secure plugin (around

Got that relationship clearly. But it still doesn't mean we are tied to the OLSR release of record if we thought it was not worth waiting on them to release a new version that fixes this issue. This is the beauty of Open Source Software. Got a problem? You can fix it if you want.

> BTW, x86 and some/most ARM platforms interoperate just fine with the

I know of a lot of open source development teams that have road maps of record, some that define dates, some that don't. I'm only asking for direction.. What's the plan? What are we aiming for? Of course if you aim for nothing you are sure to hit it, but I digress.

> As to when a solution to the cross-platform issues will be released:

Ahh.. The road map information I'm looking for. Is this you supposing or does this come from the developers?

It sure would. I would welcome us tossing the secure plugin in favor of link encryption anyway. It would be easier than fixing OLSR or waiting on them to fix it for us and it solves a host of other legal issues I have with what we have now. Personally I would want to have a way to KNOW that a node is owned by another license holder before I agree to mesh with it. Solves a lot of legal issues that come up because we share spectrum with part 15 operators.

This is not misleading at all. Just good ol' Bob trying to make it
sound that way to prove his point. Please direct me to the location
of the packet signatures that YOU are talking about. The problem in
the secure plugin involved mixed up bytes in the timestamps and other
data structures passed in the data from the secure plugin. From a
developers' view point these are not considered to be signatures.

>> What you're probably referring to is the interoperability of OLSR on the

That's funny, you never mentioned plugins before this message. So how
could I POSSIBLY deduce that you didn't misunderstand and had never
faulted the OLSR daemon? Just good ol' Bob trying to cover up his
misunderstandings of the situation at hand so that he doesn't look so bad.

Good. Just wanted to be sure you knew that since you have a habit of misunderstanding so much about the HSMM-MESH project.

>But it still doesn't mean we are tied to the OLSR release of record

Maybe we aren't but that's the way the HSMM-MESH development team operates. We call it good software practices. Secondly, we prefer to stick with released versions of other folks' software since the latest and greatest (but not released) has not been thoroughly tested. Maybe you'd go with it, but for the time being, the HSMM-MESH team is not.

If you want to run the show differently, by all means, it's all open source and you're welcome to start your own mesh project. Maybe after countless months you can have the documention you claim the HSMM-MESH doesn't have.

>> BTW, x86 and some/most ARM platforms interoperate just fine with the

>Which is the issue I'm discussing.

Duh, ya think? Still, you did suggest that x86 systems did not mesh with the WRT54G's per your statement:

"It's not a problem if you don't try to operate cross platform
(Say the WRT router and an X86 platform.)"

They do mesh, and quite well I might add.

>I know of a lot of open source development teams that have road maps

Good for them!!!

>of record, some that define dates, some that don't. I'm only asking
>for direction.. What's the plan? What are we aiming for? Of course

And if we had something we wanted to share it would be up on the HSMM-MESH.org website. You might also try checking out the project philosophy file on the HSMM-MESH.org website. Still, getting you to read something simple, like instructions, seems to be a real problem for you, Bob.

>> As to when a solution to the cross-platform issues will be released:
>> In my discussions at HAMCOM with our development lead a decision had not
>> been reached with regards to including a 'fixed' secure plugin for OLSR

>
>Ahh.. The road map information I'm looking for. Is this you supposing
>or does this come from the developers?

Earth to Bob, I AM one of the developers. As I said, I discussed this
issue with the lead developer who was attending HAMCOM, or did you
conveniently not read that statement?

>It sure would. I would welcome us tossing the secure plugin in favor
>of link encryption anyway. It would be easier than fixing OLSR or
>waiting on them to fix it for us and it solves a host of other legal

Again, you truly failed to read my message or you just have diarrhea of
the mouth/fingers/whatever and blather on anyhow. As I stated before the
secure plugin HAS BEEN FIXED AND SUBMITTED TO THE OLSR DEVELOPMENT TEAM.
If you were to pull down the latest and greatest sources (although not
fully tested and formally released) from olsr.org I can point you to
the exact fixes THAT I MADE. Heck, just search for my callsign in the
secure plugin sources.

That being said.... Bob, I have had enough. You are getting tiresome.
I've already had comments emailed to me from some of the folks down in
Austin who are reading this list as well. The concensus seems to be that
you have wore out your welcome on this list. If it were up to me (and
lucky for you it's not) I'd have kicked your ass off this list for being
argumentative as well as generating misleading and false information.
It is my opinion that your emails generally provide no useful information
and have supplied the group with a bunch of worthless whining. Like I
said, I don't have the authority to kick you off this list but, because of
your false sense of knowledge on the subject of this list, I wish I did.

I truly believe that if you give a man a fish, you fed him for a day.
If you teach a man to fish, you feed him for a life time. It's clear from
your unsubstantiated whining and complaining and incitfulness that you
do not want to fish but have others fish for you. Your ideas about how
this project should be managed or directed have pretty much fallen upon
deaf ears within the development team. I, for one, will continue to try
and teach others about HSMM-MESH but I will no longer give you any fish.

Whether you like my answers or not, I no longer give a damn. As I said,
you have grown tiresome and not just to me. I truly wish you would
leave the group. If you don't like that opinion, bummer!

2324. Does anybody have a JTAG cable I can borrow?

Yahoo group: DAWG-HSMM
Date: 2011-09-02 21:26:57 UTC
From: kc4uai
Topic: 2324 Message: 2324

All,

I just obtained a router for nothing. The catch is that it was bricked by the previous owner. The power LED flashes forever with no other LED activity. I understand that this is a symptom of a bad boot loader. I've done the 30/30/30 proceedure and tried the static MAC entry gambit but the router remains unresponsive to ping. This leaves only the JTAG recover option as far as I can tell.

I have two questions:
1. Is there some other possible thing I can try before breaking out the tools?
2. Does anybody have a JTAG Cable I could borrow?

Thanks!

2326. ARRL/TAPR DCC Forum Schedule, Banquet Speaker & Sunday Seminar Announced

Yahoo group: DAWG-HSMM
Date: 2011-09-03 09:57:50 UTC
From: Mark Thompson
Topic: 2326 Message: 2326
Attachments: 1 described; binary payloads are missing from this source WARC

The 30th Annual
ARRL and TAPR Digital Communications Conference
September 16-18, 2011 - Baltimore, MD
http://www.tapr.org/dcc

Update September 2, 2011
The speakers schedule is posted to the DCC web site at
www.tapr.org/pdf/DCC_2011_Schedule.pdf
- A full schedule of paper presentations and invited speakers.

Sunday Seminar Topic announced - see below
There is Something for Everyone!!

Introductory Talks (Saturday)

Introduction to Digital Data Modes - George Heron, N2APB
Introduction to Digital Voice - Mel Whitten, K0PFX
Introduction to D-STAR Digital Voice & Data - Mark Braunstein, WA4KFZ
Introduction to APRS - Bob Bruninga, WB4APR

Main Session Talks (Friday and Saturday) See speakers schedule posted
at www.tapr.org/pdf/DCC_2011_Schedule.pdf

Sunday Seminar

Universal Ham Radio Connectivity by Callsign Workshop - Bob Bruninga, WB4APR

With Today's proliferation of wireless electronic devices, we need a transparent means of providing end-to-end ham radio connectivity for both text and voice to any ham anywhere using any device and only his callsign for addressing. Our callsigns are unique in the world. We should be able to use them for placing a call or text using any system in real time. The goal of this workshop is to look at the handful of VOIP and more than 26 different text messaging systems in Ham radio and see where we can provide transparent connectivity. We invite experts on all systems to participate and share ideas towards this goal.

Demonstration Room

Be sure to bring your projects to show in the demo room. Even if you are not speaking. Each year at the DCC a separate (and lockable) room is provided for people to bring and show off their latest projects. Tables and power will be provided. Bring your equipment and display for all to see, learn, and ask questions about. Be sure to bring a small sign and/or flyer naming and describing your project.

Saturday Night Banquet Speaker

The Village TELCO - David Rowe, VK5DGR

There are now billions of mobile phones all
over the world. However in many developing countries, mobile phones are simply too expensive to use. For example, in a country where people earn $1.50/day, a phone call can cost 21 cents/minute. This is a huge tax on communications.

David Rowe, VK5DGR, will describe how a community
of people from around the world set out to fix this problem, using a mix of Wi-Fi and open source
software. The result is the Village Telco - a DIY telephone company that anyone can set up.

A Village Telco is constructed from a network of "Mesh Potatoes" - small Wi-Fi boxes that are mounted on homes in a village. They form a mesh network, relaying telephone calls for each other. Each Mesh Potato connects to a regular telephone inside village homes. Phone calls on the network are free. A local person in the Village can be trained in a few hours to set up and maintain the network.

To build the Village Telco we borrowed many ideas from Ham Radio, such as sharing hardware designs and community networks.

The talk will include real world stories of how Village Telcos are helping people in several developing countries, and explain why a simple phone call that we take for granted can be so important.

Registration

Are you ready? Here's a check list:

- Have you booked your travel?
- Have you booked your hotel room? (see below)
- Have you registered for the DCC? Go to https://www.tapr.org/dccregistration.php to sign up.

Hotel

Four Points by Sheraton BWI Airport, Baltimore, MD.

Use the reservation link below or call the hotel directly (phone numbers below) and mention the group
code DCC (Digital Communications Conference) when making reservations.

Bob,
I am not sure if you found a JTAG anywhere, but I can point you to an inexpensive one ($21) -- http://www.sparkfun.com/products/275. They call it an ARM JTAG, but if I remember right JTAG is a universal specification and it doesn't matter if it is ARM or TI or what.

Hope this helps,
Ron, AG5RS

2328. Re: HSMM-MESH Server balloon launch Saturday

Yahoo group: DAWG-HSMM
Date: 2011-09-03 17:38:56 UTC
From: ag5rs
Topic: 2306 Message: 2328

No, last year was the first. I have a photo of our server connected via HSMM-MESH at about 10miles up. We believe that is the first WiFi and from near space, no matter what connection.

As for the first server from near space, maybe. I know NASA has some servers on ISS, but I don't think any non-governmental agency has put a server up yet.

Sadly this year it was too hot in my workshop to improve the groundstation antennas and I had some family issues as well. That prevented me from being able to get a link up. The other guys who tried did not have enough gain to stay linked for more than a few miles. The pathloss is a killer! To get any reasonable gain margin you have to overcome 125 dBm of pathloss and still end up with about -70 dBm at the router input.

When it cools of in a month or so I will be back at feed optimization on my 1.5m dish as well as building in the needed hardware to make it fully auto-track.

One thing we proved last year and this year -- you MUST have a parallel FM video link (we use 1.265 GHz). That link is invaluable in ensuring proper aiming with the narrow beam widths your high gain WiFi dishes need.

Thanks for the interest! We love the support and participation of EVERYONE. If you ever want to get together a group to talk deep tech, let me know. I will drive to Dallas, Austin, or pretty much anywhere in Texas if you give me some notice so I can fit it into my work schedule.

From: ag5rs
Topic: 2306 Message: 2329

We were using standard WiFi protocols. The video was streamed UDP and the server used TCP.

The type of dish does not matter as long as you can point it accurately and your total system has enough gain.

Unfortunately, the laws physics constantly gets in the way of fun :-)

Here is a typical link budget:
Transmit Power + 23 dBm
Amplifier (1 watt) + 7 dB
Connector/cable losses - 1 dBm
Balloon Antenna gain + 12 dBm (max if overhead)
Balloon Antenna angle loss - 0 to -10 dBm (use -5)
Path Loss - 132 dBm at 25 miles

Total to Ground - 96 dBm

With our Linksys WRT-54GL routers we needed a minimum of -70 dBm to make a good connection and because of balloon spin, wobble, and other stuff we needed about -60 dBm for a reliable link to the server.

That means you have to get the -96 dBm up to - 60-ish to be reliable. That requires 36 dB of Antenna gain
on the ground. Also if you are not circular polarized you need another 3 dB to overcome that loss.

The Primestar setup would not likely have that. I would guess it would be in the 18-20 range. If you build one I will help you find a way to get it measured.

What that means is you probably could hit the mesh and get a link, but it would not have enough oomph to do much else.

If you want to play with these numbers -- please do. There are lots of online calculators. Just search for "path loss calculator". The only little gotcha' is don't forget that the altitude adds to the distance.

Good Luck!

Ron, AG5RS

2330. Re: [DAWG-HSMM] Re: Does anybody have a JTAG cable I can borrow?

Thanks Ron,

I believe you are correct that JTAG is universal, but I would not be surprised if there where byte and/or bit order differences between CPU types. Thanks for pointing me towards Sparkfun, they have a number of options and I hadn't thought of looking there.

In this case, I was looking for the parallel port based (JTAG on a shoestring) cable that is discussed as part of the "HaryDaryMaid" (and related) debricking utilities. The cables are available pre-built on E-bay for about $10, and possibly built for a lot less if one had a well stocked junk box.

Good stuff, I will check that out.

BTW, I think your programming software would take care of the bit order stuff.

A 25-pin parallel connector (take it from an old printer cable....available for free)

4-100K resistors (do not know any one that does not have these in their junk bok)

A short piece of 4 conductor wire (same as above)

the connector for the JTAG header on the board (or just solder to the board)

I would just build one of these un-buffed JTAG cables....not a lot involved and you would have it if you ever needed it in the future

Now....where is my junk box at.....

2333. Dishes for Sale

Yahoo group: DAWG-HSMM
Date: 2011-09-05 12:57:49 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2062 Message: 2333

Hi Folks!

I have several aluminum dishes for sale.

8 ft Andrew solid dish with steel mounting hardware for a pole mount that just needs U-bolts

6 ft Andrew solid dish with a 2 inch mounting mast

6 ft tubular grid dish with a mounting mast

4 ft solid dish with tripod mount that has azimuth and elevation controls and markings (I have two of these)

It breaks my heart, but my lot is just too small to make good use of these dishes. Reasonable offers are welcome!

Thanks & 73,

Gordon Beattie, W2TTT

Despite being directly after a holiday Kip and I are still planning to hold a meeting.

Currenty agenda includes:

+ More on the Plano Balloon Fest
+ Installation and use of an IRC (Internet Relay Chat) server on a WRT54G. This is something I've been working on this past week.
+ Discussion of Jim Kinter's (K5KTF) USB additions to a WRT54G. This is slick stuff!

and, if need be, we'll make up some more stuff to fill-in. :-)

Bring your toys and we can talk about what you've been doing the past three weeks with HSMM-MESH.

Come join us! Help with installing the latest version 0.4.2 of the firmware will be available prior to the meeting. It's much simpler this time if you're already running 0.4.0 or 0.4.1.

The IRC server on a '54G discussion/demo went over with a bang, I'd say. The hardest part was getting everybody running an IRC client on their laptops. I think everyone was running a different client and trying out the features of IRC. We got the problem children (and YOU know who you are <wink wink>) going after the proper application of the club's sturdy 2x4". :-)

Now, we could use a web interface (read - CGI in Perl) for the '54G to enable the server program and do some of the configuration. Anyone wanna give it a try? Right now, hand editting the conf file is the name of the game, but it's not too bad.

Something I plan to work on before our next meeting is to get multiple IRC servers connected. I believe this would allow you to connect to one server yet share channels with and message users of the other server(s) as well.

One other thing we did was to get some folks' nodes upgraded to 0.4.2 of the firmwawre. Having a patch file was a very welcomed feature! (Thanks David!)

If you weren't there you really missed an enjoyable session!
See you in two weeks?? I hope so!

Any particular reason to go with IRC instead of a Jabber (XMPP) server? Seems these days that there's more development in the XMPP world than IRC..

A good Chat/IM setup is a really powerful feature for a project like this...

FYI,

Here is a link to an alternative RS-232 to ttl converter board that uses the 232 compatible IC for about the same price. There is also a kit version for do-it-yourselfers. The "level shifter" kit discussed last night does not use a 232 compatible IC. Neither of these kits require a 2 by 4 for assembly.:-)

>From what I gathered at the meeting there are two reasons.

1. It is small, so it will fit into the router with the HSMM-MESH
Software.

2. It is very easy to configure, so a beginner can do it.

We tried Jabber on a Linux Machine (A PC not a router) and the
configuration was very complicated.

Sounds good... It was probably just an ipkg install or update to get the server installed. Thanks for the update.

3. The IRC server didn't require a database program to run. Yet another
PIA to configure as well and more resources.

4. Since it fits on the router there's no extra server PC that
needs to be drug out to an outting.

>Sounds good... It was probably just an ipkg install or update to get
>the server installed. Thanks for the update.

It probably wasn't. :-P

It might be later but I actually did some work to get this going. For now
it comes down to just two files -- the program itself and a config file.
I got it cross-compiled from the latest 'ngircd' sources, version 18,
on my laptop and transferred over to the router. Oh yeah, tweaking the
config file took a little work too.

2343. SiP Phones disconnect

Yahoo group: DAWG-HSMM
Date: 2011-09-14 17:15:19 UTC
From: ae5he
Topic: 2343 Message: 2343

Out here in El Paso we are experimenting with an Asterisk server and SIP phones. I have a complete VOIP phone system that works properly. I am having a problem connecting SIP phones through the mesh.
On the mesh node that hosts the PBX I have opened the following ports from WiFi to the IP address of the PBX:
UDP 5060
UDP 10001-20000

The phone registers with the PBX and I am able to initiate a call. The call will disconnect even if calling another extension.

I have also placed the PBX in the DMZ with the same results.

Are there ports that must be opened on the mesh node that hosts the SIP phone?

Doug Garcia

What I'm reading is that port 5060 may need to be opened for TCP as well.

There's lots of good into on www.voip-info.org . Maybe there's answer there.

>UDP 10001-20000

I'm seeing 10000 as the lower limit.

How 'bout the phones themselves? Behind the NAT or DMZ'd?

>Are there ports that must be opened on the mesh node that hosts the SIP phone?

Patrick, ND5C, and I were able to get several phones working on a
small mesh. He was using the 3cx PBX software, not Asterisk though.
Still, that shouldn't be an issue. I don't recall if the phones were
behind the NATs or if we put them in the DMZ.

Patrick?? Can you help us out here?

Rusty,

At the time, the HSMM-MESH software did not easily
support opening a range of ports (as it does now)
so you and I put the phones in the DMZ.

Worked like a champ after only about 2 hours!

73,

Pat ND5C

The 3CX has a built-in tunneling system to route the sip signaling and RTP ports through 1 port (5060)I believe is what I read. I too have been having trouble as well working with Asterisk. I can get the phone to register and dial (no dial tone if I remember correctly), but hear no audio when it should be ringing and it hangs up after about 30 seconds. I am going to have to use wireshark to figure out what ports are being sent back and forth to see if I can get the correct ports opened. I upgraded the firmware on my nodes to 0.4.2, but do not see the option of forwarding port ranges. I even added a single port through the GUI, then SSHed into the box, found the file, and followed the iptables syntax to forward the ports with no luck. The forewarded ports do not show up on the GUI and if I make a change through the GUI, the file is overwritten losing my changes. Can anyone shed some light on where I may have gone wrong with the forwarding of multiple ports? Also, does anyone know if you can use a wildcard on the inbound rules to say allow the RTP ports to any device behind the node instead of a particular IP address?

Thanks to all who are interested in helping find a solution to this problem. The problem shown below is pretty much what is happening with my setup. Everything works fine if all phones are connected to the same mesh node as the PBX. When I move a phone to a remote mesh node, I too experience the same issues as described by kk5it with the exception that I do have dial tone on the phone on the remote node. I can call an extension but no audio, after a few seconds the call drops and the phone display shows "disconnected". I have tried to place the PBX in the dmz on one node and the phone in the dmz of the remote node with the same results.

I am using Grandstream GXP-285 phones. The server is running asterisk installed following the instructions found at pbxinaflash.net.

What kinda of option were you looking for? A big button that says...
Nevermind. Multiple ports are specified as a range (e.g. 8000-9000)
in the port box for the Outside port and just leave the LAN port box
alone/empty. I'm not sure but it appears that you can not shift a range
of ports, say 7000-8000 up to 10000-11000.

It's more that just modifying one file to get this done! After modifying
the _setup.ports.nat file in the appropriate config directory you need
to run node-setup program to get those mods fanned out. Afterwards,
just refresh the Port Forwarding webpage. <Poof!>

>with the forwarding of multiple ports? Also, does anyone know if you

My apologies to the group for the ignorant question. Rusty, I am used to seeing boxes named start port and end port in most vendor interfaces and it has been months since I have read the user documentation section. I just reread the section again and saw what you mentioned below about putting the start and end ports in the same box separated by a hyphen.

2352. Plano Balloon Festival HSMM-MESH

Yahoo group: DAWG-HSMM
Date: 2011-09-15 23:54:53 UTC
From: Kipton Moravec
Topic: 2352 Message: 2352

Just finished setting up the Plano Balloon Festival HSMM-MESH. Got a lot of help from Doug Kilgore Wednesday and Thursday and from John Galvin today.

Nothing went easily.

The original plan was to use the First United Methodist open Wifi Connection. In the past I tried to connect to the node from the roof, then use that access point as the "internet" connection to the MESH. Another year I put a mesh node in a window on the first floor, then a node on the roof. That did not seem to work as well.

The SNR to the church's WIFI node was pretty low (8) I tried putting a 15DB antenna on it and still had poor SNR. Also my computer would say "No connection to the Internet" with that node.

After screwing a few hours, I put a MESH node (N5OOM-AP3) in the same data closet. Still bad SNR. We moved the router outside the closet and into a window that had a CLOS to a node on the roof (N5OOM-AP6) with a 15 db Rootenna. We finally got a SNR of about 26.

The 24 db MESH node on the other side of the roof (KD5OUG-13) pointing towards the Balloon Festival had a SNR below 4 between it and the other unit on the roof (N5OOM-AP6). So I changed the LAN address on N5OOM-AP6)from 172.27.0.1 to 172.27.5.1 and ran an ethernet cable from the LAN port to KD5OUG-13 WAN port and made it an Internet Gateway.

Testing Internet connection from KD5OUG-13 appeared to be a pretty fast connection.

At the balloon festival Field Operations tent I placed another node (AE5IB-AP4) with a 24 db antenna pointing at the church antenna. The units said I had a SNR of 45 for that 2500 foot link. We are going with Horizontal polarity for the long link because of ATT and all of the public with WiFi on their smart phones.

Right next to the operations tent ATT has a Wifi tower about 12 feet tall. It was not plugged in yet. It will be interesting to see what it does to us. It will raise the noise floor. But we have no idea what frequency they will use.

Tomorrow when the McKinney ARC trailer gets on site, we will add a MESH node to it also. Then we should be good for the weekend unless ATT gives us problems with their WiFi system.

Not a HSMM-MESH expert, but I am an Asterisk kinda-expert. SIP does not like situations where it needs to go with a double NAT. So if one of your endpoints is behind a NAT and your other endpoint is behind a different NAT, you're going to have issues like the one described in this thread. You guys may want to look at IAX2 protcol, which has no issues. The downside is that I don't think it is supported in a lot of phone devices.

2356. Wrapup of Plano Balloon Festival.

Yahoo group: DAWG-HSMM
Date: 2011-09-19 14:10:50 UTC
From: Kipton Moravec
Topic: 2356 Message: 2356
Attachments: 2 described; binary payloads are missing from this source WARC

Plano Balloon Festival is over with.

The link from the church to the field (2500 Feet) went down one time and we had a difficult time getting it back working, and had to reboot both sides before it would start again.

We were down for about 30 minutes while I figured it out.

When the Trailer for the Special Event station arrived we set up a node in a 15 db Rootenna and was up and running pretty quickly.

Friday afternoon I got a call, and they were asking when I was going to give internet to the Balloon Festival Finance trailer! I had done it in 2007-2009 but last year they said they did not need it, and this year I was told they would use ATT as ATT was setting up out there.

It turns out, nobody could get ATT from inside the trailer. It was all metal covered and there was metal mesh over the windows.

I put a node in the window towards the Field Operations node, but there were semi truck trailers, and a chain link fence between and I could not get a signal. I tried another side and I am guessing I was getting a bounce because I got a signal. It was not good but it was better than nothing.

Next year we will do it right and get them an external antenna.

IMAG0706.jpg shows the Field Operations tent with the mesh node in the front right corner.

ATT set up a WiFi tower right next to our tent. So pulling back you can see the tent and the ATT WiFi tower next to us. This is Image IMG070.jpg.

ATT were running on 1, 6 and 11. We had heard they would be there so we went with horizontal polarity figuring they would go with vertical polarity. We did not know that they would set up next to us. Fortunately they had problems and turned off their equipment. But when they were turned on, we did not see a problem. But they were not sending a much data.

Here is a webinar on Winlink. You may be interested. It is Wednesday night.

Winlink 2000 Intro

Join us for a Webinar on September 21

Winlink 2000 is a voluntary world-wide digital messaging system providing through Amateur radio, and various government contingency communications services, enabling communications where Internet e-mail and other messaging services are not normally available, or appropriate for use.

Winlink 2000 provides a variety of solutions for the Amateur radio operator including VHF/UHF Packet, HF Pactor and Winmor, which come in different bandwidths, reliabilities, and speeds. Winlink 2000 is used a link to family, friends and weather information for the remote Amateur radio operator. In addition,

Winlink 2000 has proven itself as an effective emergency communications options for various non-commercial and government organizations, as well as Amateur radio operators, when normal emergency communications infrastructure is not otherwise available. Attendees will learn what Winlink is, catch up on the latest developments and get a look at some real world Winlink installations as well as some field examples.

2359. Tonight's meeting

Yahoo group: DAWG-HSMM
Date: 2011-09-20 20:56:44 UTC
From: Rusty Haddock
Topic: 2359 Message: 2359

Sorry for the late itinerary but we'll try to have something interesting and techie tonight.

1) Plano Balloon Festival report.

2) Using 'ssh' to log into an interactive command line interpretor, or shell (in UnixSpeak).

2) Unix 101 -- An introduction to 'vi'. I will present an intro to the default text editor in the HSMM-MESH firmware. I'll show you how to really screw things up on your WRT54G! Oh, and EMACS is for weenies!

3) More IRC stuff -- connecting with other servers. Yes, it can be done and it's not too hairy.

2361. Want to borrow: Ethernet Cable Tester

Yahoo group: DAWG-HSMM
Date: 2011-10-02 03:59:49 UTC
From: Kilgore
Topic: 2361 Message: 2361

I have a problem with a long ethernet Cat-5 cable cable I installed by pulling thru conduit. I can't get connection to ethernet switch about 150 ft away. I would like to test the cable one conductor at a time.

Does anyone have a tester or a method of testing that I could use?

Doug Kilgore KD5OUG

From: Mark J Culross
Topic: 2361 Message: 2362

Doug:

I have two different kinds of ethernet cable testers:

1) Fox/sounder at one end, receiver/probe at other end for testing individual wires . . . you determine which one is bad based upon your own test method . . . can be used to detect both shorts & opens (you'll need some kind of end-to-end communications between the operators at each end to coordinate your testing

2) transmitter & receiver which cycles test thru all wires & indicates which one or more is/are bad . . . the transmitter can indicate which wires are open without the need for end-to-end coomunications

I'll bring both to this week's Digital Tuesday meeting if you'll be there . . .

2364. Sweep Gear at Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2011-10-03 16:40:53 UTC
From: Cecil
Topic: 2364 Message: 2364

I am planning on being at my first Digital Tuesday tomorrow night. I am mentioning this as I will be bringing my microwave sweep gear with me.

I am just saying if you have an antenna you would like to have analyzed bring it with you and we can connect it up and see what it's SWR looks like.

This is not limited to the 2.4 range either. This gear can test from 20MHz out to 20GHz, though my test feeder cable is only rated out to 18GHz.

I would also bring your feed line/wave guide as well as it can also show any problems thwt may be in it.

I will have connectors for N, BNC, and SMA. If your cable or antenna have other connector types bring your own adapters!

-Cecil

Since y'all learned about logging into a shell on your mesh nodes and using 'vi' at our last meeting I'm going to give you a workout this time. (You did practice since last meeting, right???)

Actually, I've built a .ipk file for the IRC server that I've demonstrated which will ease the installation process a bit.

Alas, to get the IRC server running on your mesh node there is a configuration file that will need to be editted first. I plan to go over that as well as the things you'll need to do like pop a hole in the firewall and enabling the init script to start up on booting. <he he he>

Y'all get to be the guinea pigs for my IRC server installation instructions which will probably go up on the HSMM-MESH.org website before too long.

Along with Cecil bringing some serious microwave test equipment with him on his first visit (so bring your antennas!) we should have a hum dinger of a good time!

See ya there!

2369. HSSM to Internet gateway.

Yahoo group: DAWG-HSMM
Date: 2011-10-05 08:03:44 UTC
From: Cecil
Topic: 2369 Message: 2369

This may be a old question, but I want to put up a HSSM to inet gateway.

What is the standard way of securing that?

Say we have an area wide test and I do not want some data flowing from the hssm to my home gate wide open for the packet sniffers to read it how do we encrypt it?

-Cecil

Cecil,

The default for a HSMM-MESH network is to be unencrypted thus being open so that any amateur radio op can join in without the need for first obtaining a key. We can use WEP or WPA2 specifically for protecting a network from unauthorized intrusion and usage. This should cover most of it. In the event of an emergency or drill... SSH/SSL would be the way to go (e.g. https:, sftp, scp). Naturally, how the data is transferred will determine the "encryption" method.

2371. Re: [DAWG-HSMM] HSSM to Internet gateway.

Yahoo group: DAWG-HSMM
Date: 2011-10-10 11:49:47 UTC
From: Bob Diepenbrock
Topic: 2369 Message: 2371

Cecil,

I'm not totally sure what you are trying to secure. Are you trying to protect your home network from the HSMM-MESH network or are you trying to control what the HSMM-MESH network can do on the Internet?

I don't believe there is a "standard" because there is a large variation of possible ways to do network security and what you choose may impact any applications you may choose to run. For instance some VOIP protocols are not very tolerant of Network Address Translations. I'll share with you how I do this at my home, but remember you may need to do something different to support your specific applicaion.

First, I have two firewalls with a DMZ between them. My HSMM-MESH node's Internet connection is in the DMZ. It looks something like this...

```
Internet -> Firewall/router -> DMZ Subnet -> Firewall/Router -> Home Network
\-------HSMM-MESH Internet
connection
```

This arrangement puts at least one firewall/router between everything I wanted to keep separate but this requires two firewall devices.

Most folks though, don't have two firewalls and therefore cannot keep things separated like I do. So, the next best thing is to simply make the HSMM-MESH node part of your home network. This takes only one Firewalll/router to do this but it will give the HSMM-MESH node full access to all the devices in your home network:

```
Internet -> Firewall/router-> Home Network
\---> HSMM-MESH node
```

If you are concerned about keeping HSMM-MESH traffic off your home network you do have the option of adjusting the firewall on the HSMM-MESH node. This is not something you can do from the HTML (web) interface, but you have to adjust a text file on the router. If you want to look into that I'll be happy to point you in the right direction.

Finally, I would try and keep the HSMM-MESH node's Internet connection behind your firewall (and not directly on the Internet). Avoid using the "DMZ Host" settings on your residential router. There is not much more than the NAT to protect the MESH network if you are running the stock configuration, so I'd keep it behind a firewall until I had to do something different.

Good luck!

-= Bob =-

2372. Re: [DAWG-HSMM] HSSM to Internet gateway.

Yahoo group: DAWG-HSMM
Date: 2011-10-10 13:16:35 UTC
From: Kipton Moravec
Topic: 2369 Message: 2372

I have the same setup as Bob.

My Verizon FIOS Router is the main firewall for my house. It has 4 ports and provide a 192.168.1.* network.

Into that router I plug my home router which has a NAT of 192.168.2.* for my 6-10 computers in the house.

I also plug a HSMM-MESH node in the the FIOS router. That way HSMM-MESH traffic can go to the Internet, but not to my home network.

Finally I have a server also plugged into the FIOS router. Because it is on the path to the Internet, both the HSMM-MESH and home network can "see" it. I have not figured how to make the routers point to it, so I add its static address to the hosts file on my computers.

Kip,

If you have the same Verizon router (Actiontec) I have, you can add
local DNS entries for host names of your choice. If your DNS path goes
though the Verizon router it will resolve these names for you. It is under
Advanced -> DNS Server on mine.

Failing that, one could run a local DNS server on your network. Bind
doesn't use too many resources and if you do DNS a cache at the same time it
can help your local network's performance. If your DMZ server is Unix based,
it would be pretty easy to get going.

2375. ipv6 allocation for ampr.org?

Yahoo group: DAWG-HSMM
Date: 2011-10-14 02:13:32 UTC
From: wa3ite
Topic: 2375 Message: 2375

Anyone know if there's an IPv6 allocation for ampr.org?

2376. Re: So no takers on a 65-foot tower climb?

Yahoo group: DAWG-HSMM
Date: 2011-10-14 02:32:38 UTC
From: wa3ite
Topic: 2154 Message: 2376

Well, after not hearing back from anyone in the past 4 months who might be willing to help with this, I can only assume new nodes aren't needed in the local HSMM network. Now that school's started back up, I don't have the time to work on this. I'll hang onto my nodes and maybe dig them back out when I have time (and there's interest in expanding the network).

--Brian

>
> I'd be willing to host a node if someone would be willing to climb a 65-foot tower to install the antenna (my limit is about 30 feet). This would fill in a big gap between the nodes to the north and the nodes in Mesquite. I'm assuming we can make a coax run from base to top without any significant loss in signal strength? If so, what's normally used for run of this length?

Not that I know of. it was discussed on the gateways list a few months ago but with gateways dying and shutting down I don't think it went anywhere. many of the issues related to getting ip space at this point for amprnet are related to cost (who pays the associated fees), justification (how will it be efficiently managed and used?...), and who administrates the business side of such an allocation. Beyond that is the issues and limitations that vary by country as to what traffic amprnet would be permitted to carry and just how interconnected it can and/or should be. beyond that is the question of who will build out the network islands be connected. I really like seeing what is being done with HSMM but there seems to not be enough of it. How for instance does one do a backbone link from say LA to Dallas? who pays for and maintains that link? Don't these issues really need resolved first, before one goes looking to justify to others the allocation of such resources?

I was thinking about approaching an organization like Hurricane Electric. They will pretty much give you a /48 IPv6 allocation just for asking. So I don't think there's really a "business side" to deal with. HSMM to Internet gateways can be assigned a unique TLD via one of the altroots (like OpenNIC); zones can be maintained by a dedicated group of volunteers.

Beyond that is the issues and limitations that
> vary by country as to what traffic amprnet would be permitted to carry and

Nothing that hasn't been addressed in years past with packet radio gateways. IPv6 doesn't change anything here.

At any rate, I don't even know if HSMM is IPv6-compatible. I was hoping someone would chime in here.

2380. Re: [DAWG-HSMM] Re: ipv6 allocation for ampr.org?

On IPV6 and HSMM-MESH...

Right now, IPV6 is not supported "out of the box." The generated MESH networks are IPV4 at this time and the user interface is geared towards IPV4.

On linking HSMM-MESH Networks...

Using the Internet (or other links outside the MESH) to link MESH networks is also not support by the current "out of the box" firmware.

This is not to say that either of these are impossible to do, but one would certainly have to make adjustments outside the provided web interface. I believe that Open WRT supports IPV6 but you would likely have to adjust a lot of the HSMM-MESH configuration by hand and I think you would have to replace at least OLSR with an IPV6 version. I thought that one might run IPV6 in parallel with IPV4, but I don't know if the hardware would have enough performance to handle both at the same time.

2383. Tonight's meeting - Oct. 18th

Yahoo group: DAWG-HSMM
Date: 2011-10-18 20:03:48 UTC
From: Rusty Haddock
Topic: 2383 Message: 2383

```
Lessee... for tonight's meeting we have:

1) Discussion/planning about field ops at PARK in the PARK.
2) Hopefully someone took on and completed the assignment
of installing a simple FTP server on their mesh node.
That lucky person gets to present how to do it!
3) What was not presented last time -- Installing an IRC
server on your mesh node.

Come and join us! Same Bat Time, Same Bat Channel!

And if you're not into bats (shame on you! especially around Halloween :-)

We start around 7pm
299 Connor Rd, Lucas, TX
Follow the driveway to the back gate and to the pool house.

Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

See you there!

Hay Rusty,

I noticed something strange. When you power cycle the router the FTP directory /var/ftp (root home dir) disappears.

I am guessing that this file system is uncompressed every boot into the working area in RAM. This calls for a small change in /etc/init.d of the pure-ftp startup script.

```
#!/bin/sh /etc/rc.common
# Copyright (C) 2006 OpenWrt.org

START=50

BIN=pure-ftpd

DEFAULT=/etc/default/$BIN
LOG_D=/var/log/$BIN
RUN_D=/var/run
PID_F=$RUN_D/$BIN.pid
HOME_D=/var/ftp
OPTIONS="-A -B -c 10 -C 4 -e -lunix -U 133:022 -g $PID_F -y 3:4"
[ -f $DEFAULT ] && . $DEFAULT

start() {
mkdir -p $LOG_D
mkdir -p $RUN_D
mkdir -p $HOME_D
chown ftp $HOME_D
$BIN $OPTIONS
}

stop() {
[ -f $PID_F ] && kill $(cat $PID_F)
}
```

This should create the root ftp directory on power on reset.

Nice guess, especially for larger systems with the flash or hard disk space to store a compressed file system, but basically incorrect for our little WRT54G. :-)

The /tmp filesystem is simply created like most RAM disks and the init scripts and consequent applications create their files in /tmp as needed.

>working area in RAM. This calls for a small change in /etc/init.d of

Indeed it does! I'll try to put this into my instructions for installing this FTP daemon. Thanks! Sure wish we didn't have to go through this level of manual diddling but... you only have to do it once

2392. Dallas Makerspace Open House

Yahoo group: DAWG-HSMM
Date: 2011-11-02 16:28:35 UTC
From: Nikropht
Topic: 2392 Message: 2392

I would like to invite you guys out to the annual Dallas Makerspace Open House event this Saturday at 1pm.

Additionally I will be helping to get the membership licenses http://dallasmakerspace.org/wiki/Amateur_Radio_Class, they are interested in being a node in the mesh network.
The space is roughly located at Walnut Hill and Monroe Drive in Dallas http://g.co/maps/mcv89

*"This is our first open house at our new location, and we want to show off all four thousand square feet off it. We have a lot of projects to show off, activities to partake in, classes to learn from, and food to eat; so come on out, bring your friends and family.

The doors open at 1pm Saturday, November 5th and will stay open until we’re too tired to talk (probably around midnight). As we confirm projects, activities and classes we will be updating the 2011 Open House<http://dallasmakerspace.org/wiki/Open_House_2011> page on our wiki, so keep checking back."
*

About DMS
Dallas Makerspace is a membership based, 501(c)(3) non-profit, shared community workshop and laboratory, similar to a hackerspace. We are an organized group of local artists, engineers, makers, creators, and thinkers that work together to collect tools and resources for our membership, who could not otherwise afford, store, or use them individually. We use these resources to collaborate on individual and community projects in order to promote science and technology, while working and experimenting on innovative ideas to encourage learning within our community.

>
>You mentioned it was on your server, could you post a link please?

Sure,
http://myweb.cableone.net/rhaddock/Radio/ngircd_18_mipsel.ipk

Be careful about the download -- some browsers may rename the file
with a .gz extension (or something else depending on the browser).
If this occurs, please rename the file to have the .ipk extension as
the HSMM-MESH firmware expects that extension.

The instructions on HSMM-MESH.org will be updated as soon as the
configuration web page has been completed. The web page will remove
all need for ssh and vi to get the IRC daemon up and running.

>Thanks

No charge. :-)

Oh, and for those that actually took notes last night. The incantation I
had for having your mesh node use local time was slightly amiss. The 'm's
indeed should have been capitalized and some 1's should have been 0's.
This is the correct shell command:

echo "CST6CDT5,M3.2.0,M11.1.0" > /etc/TZ

Yes, capitalization is IMPORTANT! :-) And if your node is not connected
to the Internet, setting your node's idea of time and date would be done
like this:

date MMDDhhmmCCYY.ss

The century (CC), year (YY), and seconds (.ss) are optional but, if
you're like me (may God have mercy on your soul!), you'll probably want to
include at least the full year or your dates could be about 40-years old.
So, setting the time and date when I write this would look something like:

date 110211572011.30

Yes, all fields need to be zero-padded so that February 2nd, would be 0202.

Then again, there's nothing in the HSMM-MESH firmware that will run
incorrectly if the date and time are not set. This is simply a personal

thingie with me.

Happy meshing!

What holes do I need to punch in my DSL to allow HSMM to tie into the Internet as a gateway?

Any other config changes needed to go fully online?

Not sure what you're planning to do unless you get a little more explicit.
If you plug the wan port of one of your HSMM-MESH routers into your
DSL modem/router anything on your mesh can access the Internet.
That's basically how the mesh is intended to be used.

Keep in mind that the 10.x.x.x addresses of the mesh will not get routed
onto the Internet.

Coming back in is a good bit different. Any service you want to provide
to the outside should be on your mesh GW node or a host connected to
its LAN. Elsewhere on your mesh will require manual manipulation of
the firewall configuration files.

It will automatically connect to the Internet if you hook into the WAN port. But to let other nodes know it is connected the gateway box has to be checked in the Setup/Configuration window.

2398. Why ChatZilla will not work with our IRC links

Yahoo group: DAWG-HSMM
Date: 2011-11-09 20:38:10 UTC
From: Rusty Haddock
Topic: 2398 Message: 2398

OK, now that I've investigated it somewhat I thought I'd share my results with y'all. ChatZilla is an addon for, at least, the FireFox browser and from all accounts it will not connect to the server nor the channel/chatroom from the URL links on the Mesh Status page of our nodes.

The reason for this is:

Remember that when IRC servers are linked together they essentially form an acyclic network (albiet virtual) on top of a real network (TCP/IP). There are some rather large and quite popular IRC networks on the Internet such as DalNet, EFNet, and FreeNode to name a few, each consisting of hundreds if not thousands of servers.

With that in mind, apparently ChatZilla interprets URLs somewhat differently. Presonally, I'd call this a bug but that's just my opinion, as humble as it gets. :-) Given a URL such as what our mesh node advertize:

irc://ae5ae-port1:6667/mesh

The ae5ae-port1 is generally considered a host name with the :6667 indicating a port number to connect to. Alas, ChatZilla parses that a little different IFF (if and only if) the hostname does NOT contain a period. If no period is found then the "Hostname" is now evaluated by ChatZilla as an IRC Network name of which it knows of about a dozen. Consequently, in the example above, ae5ae-port1 is considered an IRC network and ChatZilla doesn't know how to connect it.

Apparently you can create a network alias for a server once you connect to it and consequent URL links on our meshes to THAT ONE SERVER will work. The trouble appears to be twofold: One, you have to connect to each server to create an alias. Two, and the real kicker is, once you quit ChatZilla those aliases are not saved, as far as I can tell there is no way to do so. Someone please correct me if there is a way.

Another work around attempt is that ChatZilla will accept a ",isserver" suffix in the URL to qualify the network name as an actual server. The problem here is this suffix doesn't appear to work with other browsers. Also, even if it did work I haven't been able to successfully add this suffix to a link for advertizing on the mesh. There's something about that comma the Perl scripts on our nodes do not like. Yes, I even tried disguising the comma as a %2C, the HTML escape for special characters. Both the comma and the %2C are accepted and apparently saved but... the link does not get advertised.

So, for now, ChatZilla, while apparently a fairly decent program, doesn't appear to work for us. The version of ChatZilla I've been using is version 0.9.87.

Disclaimer: all my testing and poking about has been on Linux.
Your mileage may vary with Microsoft Windows products and applications.

2403. Tonight's Digital Tuesday Meeting, Nov. 15th.

Yahoo group: DAWG-HSMM
Date: 2011-11-15 10:54:23 UTC
From: Rusty Haddock
Topic: 2403 Message: 2403

Lessee... for tonight's meeting we have: (he says while trying to come up with something educational and possibly entertaining...)

1) What's going on in my mesh? A brief intro to WireShark (formally known as Ethereal).
2) If that's too much for you, maybe a quickie on 'tcpdump'. A similar program but without the graphics AND it runs on your mesh node!
3) Maybe we'll go over why ChatZilla doesn't work out so well for us with the IRC server.

Naturally, I'm always up for answering questions, especially if you're just getting started with HSMM-MESH.

Come and join us! Same Bat Time, Same Bat Channel!

And if you're not into bats...

We start around 7pm
299 Connor Rd, Lucas, TX
Follow the driveway to the back gate and to the pool house.

Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

See you there!

2406. Digital Tuesday Field Activity

Yahoo group: DAWG-HSMM
Date: 2011-11-16 23:00:07 UTC
From: Rusty Haddock
Topic: 2406 Message: 2406

As discussed at the meeting last night, we're planning to get together for a HSMM-MESH outdoor activity at the Plano ARK's PARK in the PARK activity this Sunday, November 20. Time is from 1 to 4pm. Place is the pavilion at (north end of) Oak Point Park and Nature Preserve, 5901 Los Rios Blvd in Plano (whoda thunk? :-). Here's a lat/lon that might be a bit more explicit:

N 33.05755 W -96.67254

Current WX forecasts indicates that the temperatures will be in the 70's so it should be fairly pleasant!

What to bring? Oh, the usual... laptop, WRT54G{,L,S}, battery, maybe some sort of stand to put your '54G above the ground. A "lollipop" is cheap and eazy to construct from a 5-gallon paint bucket, a 10-ft piece of 1.25" PVC, a few cable ties, an extension for your 12-v power or POE adapters, and... yeah, a few rocks or bricks for ballast in the bucket.

Any more to add, Kip? BTW, I don't see this on the PARK calendar. :-o

From: w5adc@yahoo.com
Topic: 2407 Message: 2407

The pile really does need to get smaller. Here is some HSMM stuff that you might be interested in:

Linksys WRT54GS-RM
Linksys WRT54GL v1.1
Linksys WRT54G v2.2 missing one of the antennas
$50 for the lot of three

2 ea Cushcraft S2403B Omni Antenna 5 dBi $20 ea
1 ea Hyperlink HG2409Y Antenna 9 dBi directional $30
1 ea WLO-2420-15 Omni Antenna 15 dBi $50

http://www.wifi-link.com/images/upload/1777_download_2057.pdf

I also have several outdoor boxes I can just kick in if you buy the routers.

All of this stuff worked at one time or another, so I am sure it is good.

Hi Rusty,

Thanks for the excellent instructions. It made installing the FTP server fairly painless. :-)

The only problem I had was that the pure-ftpd package needed the libelf package which was not on my fresh 0.4.2 install.

BTW, I downloaded the packages manually since my nodes do not have WAN access. I'm not sure if this would make any difference regarding the above issue.

Another interesting issue - Anonymous users cannot delete files. And since the server is configured to only accept anonymous logins, is there any way to delete files?

Hopefully there weren't not too many bruises or lacerations incurred. :-)

>The only problem I had was that the pure-ftpd package needed the
>libelf package which was not on my fresh 0.4.2 install.
>BTW, I downloaded the packages manually since my nodes do not have
>WAN access. I'm not sure if this would make any difference regarding
>the above issue.

There's a file on your router that contains a list of the packages
available as well as the dependencies. The scripts that do the downloads
checks the list of dependencies. So, if your node had WAN access,
downloading the pure-ftpd package would have been a little easier since
the libelf package would have been downloaded automagically.

Yep, that's the way that daemon operates. I'm not seeing a command line option to change that. The program's main purpose was being used on a hostile network (the live Internet) so that's how those things roll. I was going for simplicity and a network where people act 'nice' but the software doesn't want to account for all of that. :-)

Two ways to delete the files:
1) ssh into the node and 'rm' them manually.
2) reboot the node. Since the FTP directory in under /tmp, and thusly in RAM, rebooting will effectively and efficiently delete any files there.

If you haven't spotted it yet, the website http://www.pureftpd.org probably has more information on the program than most people can digest.

I dropped both the -e and -E options and now it accepts both anonymous and account logins with the account logins being able to delete files. (I just used my root account for testing purposes.)
This would seem to be a good setup as everyone can contribute files but only "administrators" can delete them.

Also, thanks for the package dependency explanation.

The link that Kip and I established across the Oak Point Park & Nature Preserve yesterday was only about 3300-ft, give or take, according to Google Maps. It sure looked further than that. Well, it was a fairly good connection between two RooTennas for the few minutes it existed. Then again, it should have been. :-\

Sorry we didn't have anyone else come out.

Topic: 2414 Message: 2414

I found two of the following in the garage. These are still new in the package. The price will be $25 ea or both for $45. Shipping, if necessary will be extra.

Maxrad MFB24008DT7

Specific Freq. (MHz) 2400-2483 MHz
Gain (dBd) 5.85
Maximum Input Power (Watts) 25
Type Fiberglass Omni
Product Narrative

The These antenna feature a UV stable, vented radome that provides ultimate protections against weather elements. They can be mast or wall mounted. Electrical downtilt options on select models. Provide system planners flexibility in challenging operating environments.

Bandwidth (MHz) 100
Gain (dBi)8
H. Beamwidth Omni
VSWR 1.5:1
Polarization Vertical
Overall Size 20" long x .63" radome
Termination N Female

Thanks,

Tony
W5ADC

2417. Tonight's Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2011-12-06 08:52:25 UTC
From: Rusty Haddock
Topic: 2417 Message: 2417

Hi folks!

For the year's last meeting I'll show you two little construction projects can give your little WRT54G a bit more gain. These are fairly simple reflectors that pop onto the antenna(s) of your mesh node and are made of nothing but card stock, aluminum foil, and a little glue. The patterns can be found at http://www.freeantennas.com. We'll be building both the "Windsurfer Reflector" and "Ez-10 10 dB Corner Reflector".

One more little tidbit I'll have to offer is a little bit of scripting. On WRT54G v3 and v4 there's a button behind the Cisco Systems logo on the front panel. There's also the reset button on the back of all(?) of the WRT54G's. I'll show how to have your WRT54G make use of these buttons to run scripts, change configs, what have you. All at the push of a button.

As usual, I'm always up for answering questions, especially if you're just getting started with HSMM-MESH.

Come and join us! Same Bat Time, Same Bat Channel!

And if you're not into bats...

We start around 7pm 299 Connor Rd, Lucas, TX Follow the driveway to the back gate and to the pool house.

Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

See you there!

2419. Subjects for 2012

Yahoo group: DAWG-HSMM
Date: 2011-12-07 22:28:42 UTC
From: Rusty Haddock
Topic: 2419 Message: 2419

Some things to think about and discuss here on the list for the new year:

1) Working on making some RELIABLE DX links -- on the order of several miles. This will probably have to wait for warmer weather so... Maybe another outing around Lake Lavon for starters.

2) Finding high spots in the area to locate an HSMM-MESH node. Water towers around Plano, Lucas, Fairview, etc were discussed at the last meeting.

3) Digital data comm. support for the White Rock Marathon this time next year. Item #1 can hone our skills and be ready for such an event.

4) What subjects can we explore for DigiTuesday? Not much we can do outside when the weather's too cold (or too hot) so would you like to do some packet? WinLink? APRS? Learn about TNCs? D-Star? What? More WiFi? Give us some idears here!

5) If you have a digital radio subject you'd like to make a presentation about, just let Kip or myself know and we'll be more than glad to give you the floor.

Let's discuss!

2420. Digital Tuesday Topic

Yahoo group: DAWG-HSMM
Date: 2011-12-07 22:52:32 UTC
From: John - N5TIM
Topic: 2420 Message: 2420

There is a lot of discussion on the APRS groups about using Bluetooth to connect computer to TNC etc. That would be a good indoor topic of the ins and outs of Bluetooth.

As for MESH at the Marathon. Kip and I discussed this at the Marathon and maybe the first try would be with the Start/Finish command units. The chat feature would be handy to start.

Happy Holidays to all.

John

Rusty,

Perhaps an examination of our existing Winlink system
here in Collin County might be worth some time, as well
as how we might increase its capacity.

I think that the last SET which we had last month, in
which the MRC participated, showed us that an emergency
just might overwhelm what we currently have in place.

I'm also very much in favor of trying to get some nodes
located on several water towers a few miles apart so
that we can start to have the beginnings of a wide area
MESH network available here.

Eric,

The Digital Tuesday meetings are a special interest group of the
Plano ARC. We meet on the 1st and 3rd Tuesdays of each month although
we are taking a hiatus for the holidays and thus there will *NOT*
be meetings this coming Tuesday, December 20st, and January 3rd.
We'll resume our meetings on January 17th.

Meetings start at 7pm and we meet at:

299 Connor Dr
Lucas, TX

Come down the driveway, through the back gate, and around back
to the pool house.

Google Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is
announced).

Sorry, nothing 'tween January 20th and 30th.

2425. Fwd: special ham radio video webcast today

Yahoo group: DAWG-HSMM
Date: 2011-12-27 20:07:39 UTC
From: Kilgore
Topic: 2425 Message: 2425

-------- Original Message --------
Subject: special ham radio video webcast today
Date: Tue, 27 Dec 2011 11:54:40 -0600
From: t m <wa5kub.video4@...>
To: wa5kub.video4 <wa5kub.video4@...>

Special Ham radio video premier today on http://w5kub.com

W5KUB, together with ARRL, is pleased to host the debut showing of the new video ?The DIY Magic of Amateur Radio? today December 27, 2011 at 8:30 PM Eastern time (0130 UTC Dec 28)

The W5KUB streaming website with chat has been bringing ham radio events to hams in over 150 countries for over 8 years. After this special broadcast, our web site will revert back to our normal video and chat room. This website is available 365 days per year. On days when we are not live, recorded videos are playing. If you have a ham radio video you would like us to put on this site please let us know. Our next live ham radio broadcast will be the Dayton Hamvention in May 2012 and then we will broadcast the Huntsville Hamfest in August 2012. We do it so hams around the world can enjoy the greatest hobby in the world. Our broadcast lets them feel as if they were a part of the event.

W5KUB.COM <http://W5KUB.COM> is also now on Facebook. This group is created to inform amateur radio operators of upcoming broadcasts, to receive comments and make suggestions for future broadcasts, and to discuss ham radio. Everyone is welcome. Remember our video/chat room is at Http://w5kub.com its on 365 days a year.

Please join our facebook group at
https://www.facebook.com/groups/279273778772594/

For more information about Amateur Radio and ARRL?s DIY campaign, go to

From: Mark J Culross
Topic: 2427 Message: 2428

Jerome:

Did you try the 30-30-30 reset procedure:

- with power on, hold the reset button for 30 seconds
- while continuing to hold the reset button, remove power
- leave power off for 30 seconds (you can release the reset button during this "rest" period)
- while (re)holding the reset button, apply power
- continue holding the reset button with power on for 30 seconds
- release the reset button
- attempt to connect & login as you normally would with the default username & password

Following this procedure performs a "master reset" which should take the router back to the condition that requires you to reconfigure & reset the password to something that you get to pick.

Good luck & have fun !!

If you truly completed the setup and saved then the router should reboot
(if it doesn't, then hit the reboot button). One of the items on the
setup page was a password, entered twice. This has to be changed else
the router will not reboot. Upon the reboot, the password entered will
be the password for the root account.

Interesting to see Yaesu (Vertex-Standard) going in this direction, but it seems like it's probably the right direction to go for Digital Voice Radios. Like it or not D-Star is an orphan apparently only used in amateur radio and only really supported well by a single company where as DMR and APCO-25 have support and market share with a greater user base and number of companies supporting them. The paper is also right on about addressing many digital myths out there Thanks for the link

2433. Re: [DAWG-HSMM] Yaesu's vision of digital

Yahoo group: DAWG-HSMM
Date: 2012-01-01 21:52:10 UTC
From: James Hall
Topic: 2430 Message: 2433

I posted something about this on my blog a few days ago when I stumbled across it on Yeasu's website. After that I've seen people talk about something like Yaesu is getting spun back off to it's own company from Vertex-Standard which is remaining with Motorola. I never even knew about Motorola buying the company in the first place. I guess with that news, any digital plans they may have might be up in the air.

Really needs some competition but I'm hoping that the next major standard is more open source in the spirit of Amateur Radio. It would also be very nice to see some progress in new technologies, rather than the same old rehashed thing that the main players have been pushing out for years. Wifi can do full-duplex voip and other things on the same frequencies. Would it kill anyone to scale that down to lower bandwidths and put it in a digital radio?

James

2434. Cowtown Hamfest

Yahoo group: DAWG-HSMM
Date: 2012-01-02 06:09:10 UTC
From: jeff
Topic: 2434 Message: 2434

Will any one be teaching a class about HSMM-mesh at the cowtown hamfest in Fort Worth, Texas on the 20-21 of January? If not, Please sign up and teach and you will have atleast one student. I am hoping to learn enough so I can take it back to my club and teach them how to set it up and ways to use it. If not I guess I will wait until Hamcom in Plano.
Thanks,
Jeff N5XHI

Hi Jeff

Yes, we will have two presentations on HSMM at the Cowtown Hamfset.

Kip will be presenting a Basic HSMM presentation on Saturday at 10 AM and Rusty will be presenting one on advanced HSMM at 11 AM.

More information will be updated on the web site as soon as we finalize the schedule.

Look forward to seeing you there.

Hi Jeff

A portion of my "Photovoltaic Power for Emergency Responders" presentation at 9 AM will also include powering an HSMM-Mesh node powered with PV. I plan to have an autonomous PV powered node to demonstrate. The presentation will draw from material taught in the "Solar Fundamentals" course at Tarrant County College.

Quote:
The most attractive benefit of digital communication is its ability to transfer large amounts of data. While it is commonly believed that narrowing the occupied bandwidth to efficiently utilize the frequency spectrum, is the primary advantage of Digital radio, we know that if the bandwidth is made narrower we lose the large data transmission advantage. In this situation, it becomes difficult to understand why anyone would want to use Digital communication for this purpose.

I found that in the Yeasu PDF, and tend to agree.

OTOH, they seem to be considering 9600 baud to be "large amounts of data"
in the same PDF. It'd be nice to see something faster though.

Thanks for the replies.

The problem turned out to be that the password was inadvertently entered in uppercase.

Subject: Problem with Setup with Default USER Name and Password

Just installed the latest version of Firmware to a WRT-54G ver 2 Router.

However, after completing the setup and saving, I cannot enter SETUP with the default User Name and Password (root / hsmm).

Is there another backdoor to re-enter the system or did I miss something?

Thanks in advance for any help !!!

What is World IPv6 day?

From the Yahoo Mail web site:

World IPv6 day is June 8, 2011. This is a 24-hour trial period in which a number of major websites including Yahoo! will provide their content on both the IPv4 and IPv6 servers. This initiative is led by the Internet Society (ISOC). You can also find more information on their website by going to http://www.worldipv6day.org/ .

IPv6 World Day has come and gone. All my workstattions and servers (DNS servers included) were all "dual-stacked" and sharing some part of my /64 share of IPv6 addresses. No "NAT", ever! There is simply no need for it when every human being and every port on every router/device on the planet can have 64 bits worth of address space - and even then we only use up less than 5% of the total IPv6 address space. 128 bits is a BIG BIG number. Never again shouls anyone ever parcel out one IP to a customer, nor should anyone ever be charged extra for address space (/64 being the minimum for a residential customer).

But yes, IPv6 World Day occured without a single disruption. Surprisingly even Microsoft didn't have any problems! Sure, a few companies experienced a few bumps. But the Internet itself hummed along nicely like nothing had changed, without disruption to existing IPv4 traffic. Sites like the following all worked (and still work) perfectly:

www.v6.facebook.com
ipv6.google.com
ipv6.cnn.com
ipv6.nasa.gov
...and the list goes on...

Hurricane Electric, through their subsidiary TunnelBroker.com, offers FREE /64 address prefixes to anyone who asks. They use a SIT tunnel (IPv6 encapsulated inside IPv4) to get you from your home/office to the HE.com routers, and thus onto the worldwide IPv6 backbones all around the world. This is a nice *temporarly* measure until more ISP's roll out their own IPv6 networks.

Enjoy!

/This just in!! From all indications, it looks like the Arizona Office of Emergency Services is going to bring one of their TOAD vans to Quartzfest* to demonstrate it's capabilities. The TOAD van is a satellite internet hub that serves multiple subscribers with a WIFI "HotSpot" connection at what I hear is lightning speed. The state guys (or gals) will be giving us a talk about how and when the van is deployed, area of coverage and lots of other cool information. Stay tuned for more info on this as we get it.

/What's missing? HSMM-MESH.

2445. Moving data between nodes

Yahoo group: DAWG-HSMM
Date: 2012-01-10 19:18:54 UTC
From: Jerome
Topic: 2445 Message: 2445

I have several nodes that are now setup and taking to each other (as indicated by being able to access the web interfaces of each of the nodes across the network).

I need help in how to set up PCs (both Windows and Linux) to access and exchange files and forms between the PCs connected on the mesh networks (typical field application).

I also would like to access an IP camera attached to the network (Airlink101 SkyIPCam 250W).

A basic start from scratch assumming nothing set of instructions would be appreciated.

I would like to setup a demonstration using this and share this with the Atlanta-HSMM-MESH group.

Thanks in advance for your help.

Hi Jerome,

Congrats!

A couple of ideas (not necessarily cookbook, but may get you started).

File transfers

Option 1 - Filezilla. Essentially a "prettied up" ftp interface (server and client) for PCs. If you go this route, I suggest you first get it working on a couple of PCs on your home network (eliminate the mesh variable), and then add the mesh.

Option 2 - IRC - see hsmm-mesh.org, and search for IRC. There are great directions on how to install an IRC server _in a node_. (IRC = chat room). Once you do that, as you are 'chatting' with someone at another node, you can 'send a file' that the user stores where they want.

Option 3 - there are probably a zillion other good options.

I'll send some notes on my experiences with Options 1 and 2 to you by separate e-mail.

IP Camera

Thanks to some great instructions on hsmm-mesh.org (search for Foscam) I got a Foscam IP camera installed within an hour. Basic idea is get it working on your home network first, and then port to the mesh. I don't have first hand experience with Airlink, but my guess is the camera has a built in web server that you browse to see the photos. No I don't want to start a "my browser is better" war, but I found Firefox and Chrome to "play nicer" with the Foscam camera.

Best of luck to you and I hope this helps.

Scott

2454. Digital Tuesday, Jan 17th

Yahoo group: DAWG-HSMM
Date: 2012-01-16 21:54:32 UTC
From: Rusty Haddock
Topic: 2454 Message: 2454

Well, Tuesday night, Jan. 17th, we start up our Digital Tuesday meetings for 2012. It'll be at the same time, same place:

7pm
299 Connor Dr
Lucas, TX
Google Map: http://tinyurl.com/3pw5fvq

Come down the driveway, through the back gate, and around back to the pool house.

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

Topics for tonight:

I was thinking about doing a dry run of my talk scheduled for the Cowtown Hamfest this coming weekend but... well, it's not done. :-\ Instead, let's call tonight "Connectivity and Repair".

1) Bluetooth and Packet -- Communicating with a remotely placed TNC from your PC. The hardest part of all this is finding a Bluetooth-to-Serial adapter. Rusty will bring one of his gadgets along with his trusty, but old, KPC3 (non-Plus version). I'll drum up a link or two for current production products. I've been using this to connect Xastir (APRS on Linux) running on my laptop to my KPC3 upstairs in my shack. It has worked fairly well despite all the wifi signals going through the house.

2) RS-232 to Ethernet -- These are interesting little boxes that allow you to connect to a device with serial (RS/EIA-232) I/O but do it over ethernet. A good little widget to plug into a LAN port on your mesh node.

And for the repair portion...

3) Mark Culross has KINDLY agreed to bring his USB JTAG adapter and we'll try to resurrect any misbehaving or bricked WRT54G's that you might have. Rusty has a really bad WRT54G so we'll try getting that to run and, if you've got a bricked unit, we'll try to get it running again too. No guarantees though! Bring your "bricks"!!!

And if you've got some neat widget or piece of kit to share with the group, by all means, bring it along with you.

And, naturally, we'll try to answer your questions about, well, whatever we have answers for... or can make up on the spot. :-D

See you there!

```

2458. Web cam issue, need kernel advice.

Yahoo group: DAWG-HSMM
Date: 2012-01-23 01:11:27 UTC
From: Cecil
Topic: 2458 Message: 2458

So my problem is as follows.

The package for Phillips web cams is easy to load from ipkg but I am having a pain finding anyone locally that has any web cams that are that old in stock. This leaves flea-bay, not high on my list.

So that leaves us trying to get kmod-video-uvc installed. But the only back port of uvc that I can find requires hooks that are in the 2.26 kernel.

My question is then this, does HSMM-MESH require open-wrt 7.09 2.24, or is there any reason that I could not compile up 7.09 2.26 and move the web pages and olsr configuration to that version?

-Cecil

2459. TAPR and iQuadlabs Announce Agreement for Software Defined Radio Components

Yahoo group: DAWG-HSMM
Date: 2012-01-25 02:52:17 UTC
From: Mark Thompson
Topic: 2459 Message: 2459

http://www.arrl.org/news/tapr-and-iquadlabs-announce-agreement-for-software-defined-radio-components
TAPR and iQuadlabs Announce Agreement for Software Defined Radio Components01/22/2012

Tucson Amateur Packet Radio www.tapr.org (TAPR) and iQuadlabs http://iquadlabs.com/content/home have announced a sourcing agreement for openHPSDR http://openhpsdr.org/ (High Performance Software Defined Radio) development boards. These include Pennylane, a ½ W transmitter, Mercury, an HF direct-sampling receiver and Magister, an FPGA-based interface controller card.

Together these boards can be used to create a high-performance HF SDR transceiver.

Under the new agreement, TAPR will acquire inventory from iQuadLabs, creating a one-stop source for all openHPSDR boards. In addition, iQuadLabs will acquire inventory from TAPR to build pre-configured and tested complete openHPSDR systems. Zephyr Engineering, Inc will continue to manufacture the assembled boards.

Amateurs interested in exploring “next generation” Software Defined Radio will be able to easily purchase openHPSDR components directly from TAPR. And, for the first time in the history of openHPSDR, those who wish to buy a completely assembled and tested radio will have a source at iQuadLabs.

TAPR is a non-profit organization devoted to furthering the development of digital communication technology in the Amateur Radio community. TAPR and ARRL co-sponsor the annualDigital Communications Conference www.tapr.org/dcc. Last year’s conference was held in Baltimore, Maryland. The 2012 conference will be held in Atlanta, Georgia.

2462. Digital Tuesday, Feb. 7 meeting

Yahoo group: DAWG-HSMM
Date: 2012-02-07 21:20:22 UTC
From: Rusty Haddock
Topic: 2462 Message: 2462

Sorry for the late announcement.
Adgenda for tonight's meeting:

1) By request, Rusty will go over installation of the IRC
server software onto your WRT54G.
2) John Glavin, N5TIM, will give a presentation on software
he's found for using a PC's soundboard to replace a packet
TNC for use with WinLink and APRS.
3) Again, let's discuss what direction to take DigiTuesday.
Quite honestly, I've run out of ideas for presentations
We might also discuss going to a monthly meeting schedule
as well.

See you tonight!

Meetings start at 7pm and we meet at:

299 Connor Dr
Lucas, TX

Come down the driveway, through the back gate, and around back
to the pool house.

Google Map: http://tinyurl.com/3pw5fvq

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

2466. Rosewill USB Wireless Adapter

Yahoo group: DAWG-HSMM
Date: 2012-02-09 15:32:43 UTC
From: Kilgore
Topic: 2466 Message: 2466

Here's an interesting form factor on a USB wireless adapter

http://www.newegg.com/Product/Product.aspx?Item=N82E16833166074

Won't be usable for HSMM-MESH.

Doug KD5OUG

2467. Re: Rosewill USB Wireless Adapter

Yahoo group: DAWG-HSMM
Date: 2012-02-14 01:58:32 UTC
From: Bob Diepenbrock
Topic: 2466 Message: 2467

I think that you *could* use this adapter, say from a small notebook or desktop.

The big secret with connecting to an HSMM-MESH network is running the OLSR daemon with the correct security key on the network interface. The key is on your HSMM-MESH router, or you could go snag a copy of the subversion repository.

I'm told that the current OLSR daemon has a slight issue that may prevent it from working correctly right now. I'm also told that a fix has been submitted and it will hopefully find its way to HSMM-MESH firmware in the future. However, I'm betting that it would not be too hard to either turn off the OLSR security stuff on your nodes or build a corrected version.

2468. Re: [DAWG-HSMM] Digital Tuesday, Feb. 7 meeting

3) Again, let's discuss what direction to take DigiTuesday.
Quite honestly, I've run out of ideas for presentations
>
>
>

I won't ever make a Tuesday meeting due to the son's boy scout troop, but I had a few ideas for presentations.

1. Discuss porting HSMM-MESH to other hardware. OpenWRT works on multiple platforms that would work.
2. Discuss implementation of IPv6 on OpenWRT
3. Discuss the configuration of OLSR for IPv6

One interesting hardware platform is the NetGear WNR3500L which comes with a Gigabit switch and pre-wired USB port. The console port is easy to access too, which makes recovery from bricking a bit faster. Looks to be well supported by OpenWRT and run just under $60 new.

The WNDR3800 looks *really* interesting because it also supports 802.11a links (5.3Ghz) which could be used in part 15 for local links, then the 802.11g radio could be used for long haul (part 97) links. They are a bit expensive though.

2470. Digital Tuesday, February 21 meeting

Yahoo group: DAWG-HSMM
Date: 2012-02-20 07:28:15 UTC
From: Rusty Haddock
Topic: 2470 Message: 2470

On Tuesday night, Feb. 21th, we continue our Digital Tuesday meetings
for 2012. It'll be at the same time, same place:

7pm
299 Connor Dr
Lucas, TX
Google Map: http://tinyurl.com/3pw5fvq

Come down the driveway, through the back gate, and around back
to the pool house.

Talk-in will be on the Plano repeater, 147.180+ PL107.2 (which is announced).

In again deviating from our HSMM-MESH topics we will have Pete Loveall,
AE5PL, will give us a talk about:

"APRS, the Good, the Bad, and the Ugly; How to be a conscientious ham
sharing a busy frequency." We will discuss what and how to beacon
positions, how to communicate (send messages), how to make use of
various services available to the APRS operator, and how to use APRS
on RF AND the Internet. Rusty will be giving hands-on demonstrations
after the presentation.

Peter Loveall, AE5PL has been involved with APRS since the mid-1990s
and is the developer of the de facto standard APRS server on the
Internet, javAPRSSrvr. He continues to be a champion for the RF
user and providing access to worldwide resources to that RF user.

Come join us!

Intel, Once Again, Plans to Remake Radio Circuitry
*
By Don Clark

Intel has few peers when it comes to driving digital technology. Now the Silicon Valley giant believes it has penetrated one of the last bastions where another approach still prevails: radio.

The company is using a technical conference in San Francisco this week to disclose progress in designing new versions of key radio components that are typically built using analog technology and different materials than the silicon used to create most digital chips.
It's referring to things like power amplifiers, transmitters, modulators and other "radio frequency" components, often collectively described by the initials RF.

"We are getting close to having the complete kit of digital RF building blocks for these radios," says Justin Rattner, Intel's chief technology officer.
Why should we care? It all comes back to Moore's Law, the technology tenet Intel rides for all its worth.

The relentless pace of transistor miniaturization that Intel co-founder Gordon Moore first described in 1965 keeps bringing us more inexpensive and useful microprocessors and memory chips, not to mention devices like laptop computers and iPhones.
If RF circuitry can be produced in the same chip factories—with the same ever-declining cost per function—radios used to send data over networks like 4G or Wi-Fi can be much less expensive and ubiquitous, Rattner argues.

A logical extension of this approach is to place RF components alongside others on a chip, saving space and energy and cost in products like smartphones.
One of Intel's papers at the International Solid-State Circuits Conference http://isscc.org/ describes such a creation, a chip that has a Wi-Fi transceiver and two Intel Atom processor cores on the same piece of silicon.

Devices called "system on a chip," or SoCs, already are commonplace in cellphones. Many of them include a key communications device called a baseband

processor alongside a conventional processor that runs application software on the device.

But the RF components that actually modulate and amplify radio waves are usually kept separate, in part because their signals can interfere with operations on other parts of the chip, Rattner says.
Mitigating that
interference was a key part of the Intel effort, he adds, requiring collaboration from engineers in its research, development and manufacturing groups to come up with the right approach.

The results give Intel “great confidence” that it will be able to come up with true single-chip products with RF components for phones, tablet computers and other devices where size and power consumption are paramount, says Rattner, while conceding that such developments are at least several years away.

There’s reason to inject at least a note of skepticism here. A company that has bet its future on billion-dollar factories and the most advanced production processes may be expected to think that they are the most efficient way for producing just about anything.

But many makers of analog chips have effectively, and profitably, done just the opposite—reducing costs steadily by using older manufacturing recipes, RF-friendly materials like silicon germanium and factories that were paid off decades ago.

Intel’s credibility about timing is also subject to question. Rattner’s predecessor as Intel’s top technologist—Patrick Gelsinger, who is now a senior executive at EMC—ten years ago made similar statements to kick off an effort he called Radio Free Intel.

“Those back at the ranch were scratching their heads,” recalls Rattner, who says Gelsinger was prescient in setting a technical goal but underestimated the time and effort required. “We spent the better part of the past decade figuring it all out.”

Besides radio components, Intel is using the event known as ISSCC to present technical papers in a variety of other areas—particularly chips designed to sharply reduce power consumption by operating at close to the “threshold voltage” of transistors, the amount of current needed to turn them on.

Another focus is on a new way for designing components known as floating-point units, which are involved in handling many mathematics operations.
The approach uses “variable” precision—in some cases reducing the number of bits to express numbers in scientific calculations—which can actually lead to more accurate results and save energy and computing time, Rattner says.

2473. PARK Balloon SIG

Yahoo group: DAWG-HSMM
Date: 2012-02-22 14:35:50 UTC
From: Kipton Moravec
Topic: 2473 Message: 2473

The Plano Amateur Radio Klub, is forming a PARK Balloon SIG (Special Interest Group) to build payloads and launch in Amateur Radio High Altitude Balloons to near space. (60,000 to 235,000 feet).

There are lots of opportunities to participate, and a lot of different jobs. There are building payloads, being on the launch team, being on the recovery team, tracking the balloon, predicting the path, interfacing with the FAA, etc.

Our SIG is open to all Amateurs Radio operators (you need not be a member of PARK to participate).

We are also opening it up to non-hams. (We will help you get your license, so you can participate more fully).

ARBONET has offered us a payload spot on their April 21 Balloon launch in Hillsboro, if we can be ready in time.

Our First meeting will be on Saturday, March 3, at 9:00 a.m. at the

Plano Super Bowl
2521 Avenue K
Plano, TX 75074

There is a meeting room upstairs.

We have also started a PARKBalloon yahoo group.
PARKBalloon-subscribe@yahoogroups.com to subscribe to email information.
or http://groups.yahoo.com/group/PARKBalloon

Put it on your calenders! And get the word out.

Kip

2474. ham homestead for sale near McKinney TX

Yahoo group: DAWG-HSMM
Date: 2012-03-01 18:13:14 UTC
From: N0RQ-lists
Topic: 2474 Message: 2474

Do you know anyone that might be looking for a "ham homestead" in north-central Collin County (north of Dallas)? If so, please forward this to them.

My 12 acre plot with an 11-year-old home and barn is about ready to go on the market, and so I'm mentioning it here in advance as for sale by owner, before we list it with our agent.

The property is in Melissa, TX, just 8 easy miles to the heart of McKinney (intersection of 75&380).

Included is 12.3 acres, 2715 sq.ft. home, large barn, and 60' Trylon tower with antennas, multiple runs of LMR-600, and plenty of space to put up whatever else you'd like!

More details at www.MelissaAcres.com <http://www.melissaacres.com/> .
Please email me with questions (mycallsign <at> att.net), or use the Contact form on the web site.

Dave Dunbar, N0RQ

From: Rusty Haddock
Topic: 2476 Message: 2476

On Tuesday night, March 6th, we continue our Digital Tuesday meetings
for 2012. It'll be at the same time, same place:

7pm
299 Connor Dr
Lucas, TX
Google Map: http://tinyurl.com/3pw5fvq

Come down the driveway, through the back gate, and around back
to the pool house.

Talk-in will be on the Plano repeater, 147.180+ PL107.2

The presentation for the night will be:

"Digital Messaging Using NBEMS"

There will be an explanation and demonstration of the Narrow Band
Emergency Message System using VHF radio. The system uses the
free software soundcard programs Fldigi, Flwrap, Flmsg, and Flarq.
This suite of programs is available for Windows, Linux, and OS X
operating systems. Bring a USB memory stick to load the software
to your computer.

Presenters:
Doug Kilgore KD5OUG
Paul Newman KA4TYW
Brady Pamplin W5LH

See y'all there!

Could you put this collection of software on a server somewhere. I simply cannot get to meetings on Tuesday night since I'm sitting in class then.

I think if you'll just Google the program names you can easily find
the versions for the operating system you use. It's all open software.

2481. Job opening - IT support technician

Yahoo group: DAWG-HSMM
Date: 2012-03-09 16:26:05 UTC
From: w5inf
Topic: 2481 Message: 2481

Hello all,

My company has an immediate opening for an IT customer support technician. The primary function will be desktop support at the help desk, however, dispatches to the customer site are common (mainly the Dallas area). Windows 7 and XP are the primary OS platforms. The full job description can be found at: http://www.cognoscape.com/join-team-2

If you are interested please forward your resume to CognoscapeHR@...

Doug, I will check to see if I can make the 147.12 machine this afternoon and get back with you. If I an hit it ok, I will be sure to check in. I will let WB5NZV know as well.

I will be holding a training session on the 11th at 1400 on the 146.92 (PL 110.9) repeater. It is open to everyone. We will be using MT63-2000 also.

Paul Newman KA5TYW, Brady Pamplin W5LH, and myself Doug Kilgore KD5OUG will be giving a demonstration of NBEMS to the Richardson Wireless Klub on Monday, Mar. 12. We expect to be sending messages over the 147.12 repeater sometime between approximately 7:45 - 8:30pm. We will be using MT63-2000 for the demo.

I was wondering if you or some of your folks might be able to hit that repeater and would send us a message or two after we come on the air?

We have a test feature on this 147.12 (No PL) repeater that will let you hear your own signal. While transmitting, key in 411 on the DTMF keypad and then release. If the repeater can hear you OK, it will respond with a morse code "OK". After the transmitter drops, whoever makes the next transmission will be recorded and played back. You can test that way.

I'm not able to reliably hit the 146.92 repeater from my house.

2483. How to SSH?

Yahoo group: DAWG-HSMM
Date: 2012-03-13 17:52:12 UTC
From: Damon
Topic: 2483 Message: 2483

Good afternoon all,

I am working on getting IRC installed onto one of my nodes for our group here in Muskegon, MI. I have gotten the IRC software uploaded to the node, and the ports forwarded and advertised. I am now having trouble figuring out how to go about SSH into the router to use VI and configure the IRC file.

I am on a Windows 7 machine. I have read about using "PuTTy" but have not been able to get a connection. A few questions.... which 'hostname' or address is used? do you need to be directlty connected to the router or can you SSH through the MESH network?

If anyone can maybe post a link to, or write up a step-by-step guide on how to get SSH connected to a mesh node I would apreciate it!!

Using 'SSH' to get into your node is just like using a terminal program, like HyperTerm, to telnet into another computer. Another terminal program that I like is call 'TeraTerm' (http://ttssh2.sourceforge.jp). This and putty will give you access to the Linux shell or command line on the mesh node. You have to keep in mind that the SSH server on the mesh node uses a different port than telnet and the default ssh. Its transmissions are encrypted for purposes of obscuring the meaning of the data transmitted. Because of this it would probably be best if you physically connect to one of the node's LAN ports and thus avoid the hassles of Part 97.

PuTTy should do the trick but you need to remember that the mesh nodes are not using the standard port for SSH. Instead of port 22 they're accepting connections on port 2222. Coming into through a LAN port, just use 172.27.0.1 or the hostname 'localnode'.

Remember that you will login as 'root' with the password that you entered on the Mesh Node setup screen.

Does this help? Sorry, but I haven't been helping David Spratt, AE5VS, with his configuration webpage and I need to get back onto this. Being able to configure the IRC server with the webpage will preclude SSH and 'vi' and all that other good stuff.

2493. Texas Tornadoes....

Yahoo group: DAWG-HSMM
Date: 2012-04-05 20:32:13 UTC
From: Damon
Topic: 2493 Message: 2493

First off hopefully everyone from this group is ok.

My question is did the DAWG group (or others) end up using the MESH for anything after the tornadoes yesterday? Any real world stories coming out of a crazy Texas weather day? I know that I have read that there are full time MESH links at several Hospitals, and other sites.... how did they fare? were they activated and used by any agencies?

The HSMM-MESH nodes attached to Hospitals are in the Austin area.

There are not enough in the DFW area yet to form a net. They are too few
and far between.

2499. Tonight's topic -- Rootennas

Yahoo group: DAWG-HSMM
Date: 2012-04-17 09:45:48 UTC
From: Rusty Haddock
Topic: 2497 Message: 2499

Before the meeting, gather at the driveway of our meeting place at 6pm if you'd like to participate in checking out the mesh node that Kip has placed on a local ham's tower overlooking Lake Lavon. This is to mostly check out if the node is still functioning, rebooting if necessary, in preparation for our Lake Lavon mesh building event. (When is this, Kip?)

The topic for tonight's meeting will be the installation of a WRT54G into a 15-inch Rootenna. Not real difficult but just to show how easy it is to add a gain antenna to your mesh node.

Discussion of our outing to Lake Lavon, when to meet, what to bring, where to setup around the lake, and all sorts of other little details. :-)

See you tonight!

2502. Lake Lavon outing...

Yahoo group: DAWG-HSMM
Date: 2012-04-18 22:25:12 UTC
From: Rusty Haddock
Topic: 2502 Message: 2502

Our outing to Lake Lavon has been scheduled for Saturday April 28th. We'll meet on the driveway of our usual meeting place (299 Connor Rd, Lucas, TX) at 9am (yeah, that's in the MORNING :-).

I currently have a Google map of Lake Lavon with various places to setup marked on it. I've made the map public but you (I hope) can not edit it. If you have some notes or additional points of interest you'd like to see added, email them to me and I'll add them. The map is here:

http://g.co/maps/tvs2j

This outing will need some advanced preparation!!!

Please use the map IN ADVANCE of our outing to pick a place or two that you'd like to work from. Heck, scout it out beforehand as well if you like. The idea of this exercise is to make a mesh, not necessarily connect to the Internet if it's available. A 2m radio would be a good piece of gear to bring along for voice coordination, even if it's so we can call you to see if you're still alive, having MESH issues, etc. Being able to connect to an IRC server if we get meshing would be helpful.

Stock antennas on a WRT54G will not be useful at these distances so please be prepared with a gain antenna of some kind.

Afterwards, if you're interested, the McKinney club is running a special event station (K5F) in Frognot (Blue Ridge) to commemorate International Save the Frog Day. Yeah, it's crazy but it's fun! Maybe you just hafta go to Frognot and see for yourself...

Any questions? Please let me know if you'd like to precipitate! :-)

-Rusty-

From: Brian
Topic: 2503 Message: 2503

This is my problem too...I'd love to come out and play, but everything gets
posted to the list on short notice. Is there a link to upcoming activities?

2504. Re: Fwd: [DAWG-HSMM] Digest Number 844

Yahoo group: DAWG-HSMM
Date: 2012-04-19 12:09:12 UTC
From: Kipton Moravec
Topic: 2503 Message: 2504

We discuss at the meetings.

The next event is April 28, 9:00. We test long distance antennas by
going around Lake Lavon. Rusty has posted this.

Kip

2505. Freifunk mesh

Yahoo group: DAWG-HSMM
Date: 2012-04-20 03:00:37 UTC
From: wb8i
Topic: 2505 Message: 2505

I have a couple of WRT54G-TM routers that have Freifunk mesh loaded on them. Anyone had any issues loading HSMM-MESH over them ?? Just thought i would ask, before I bricked one of them.

Tnx

Nope. Shouldn't have any problems at all. The -TM versions had
extra RAM and FLASH memories.

2508. MESH Map

Yahoo group: DAWG-HSMM
Date: 2012-04-25 15:26:48 UTC
From: ehorton62
Topic: 2508 Message: 2508

Is there a MESH map of the Nodes in the Plano area? I live in the low area by Bod Woodruff Park and was looking for a node to connect my WRT54g to.
Thanks,
Ed

I'm so far from an experienced user, but your router should find any MESH unit to connect to automatically.

Yes. I currently don't see any nodes. I don't know if there is any close by and what kind of range can I expect. Maybe I need a directional gain antenna, but not to sure what direction I would point it. I just thought there might be some map like Austin has showing the node locations. Thanks

Indeed and I've received only one email about one person's points of interest. The map is at http://g.co/maps/tvs2j and a little preparation will go a long way towards having a good time!

I have obtained permission to use Larry Essary's (K5XG) 2m repeater. Output is on 146.900- with a PL of 118.8-Hz.

Looks like the showers/thunderstorms forecast for this weekend have moved into next week.

See you at our meeting place at 9am.

2514. Tuesday night's meeting topics

Yahoo group: DAWG-HSMM
Date: 2012-04-30 21:04:23 UTC
From: Rusty Haddock
Topic: 2514 Message: 2514

Topics for tomorrow night meeting:

1) Lake Lavon outing -- sadly, it wasn't good.
2) Can your laptop, with WiFi, be used as a simple mesh node?
Doing this with Linux running on a laptop is trivial but
what about Windows? Can it be done? Why would you want to
do this? Come see!

Excellent... Hopefully some slides or meeting notes will make it to the web. I asked (somewhere) about doing this a few months ago and "trivial" was not in the responses I received. :-)

> what about Windows? Can it be done? Why would you want to
> do this? Come see!

VM's? This will be interesting...

Maybe... if slides are made or someone keeps notes.

>I asked (somewhere) about doing this a few months ago and
>"trivial" was not in the responses I received. :-)

Here, I'm only talking about literally being a routing node, much like
my Zipit Z2, but not about doing everything a HSMM-MESH node does such
as advertizing services, acting as a router, providing DMZ, NAT, port
forwarding, and the 1-click shopping of HSMM-MESH web interface or not.
Naturally, this would not apply to Linux running on non-little endian
CPU's.

>> what about Windows? Can it be done? Why would you want to
>> do this? Come see!
>
>VM's? This will be interesting...

Who said anything about VM's? That just trivializes the solution.

Still, I want to see what Kip comes up with for Windows!

My bad. So much for Windows this time. Sorry folks.
Maybe someone that's Windows knowledgable can take what
I present tonight and look into what it would take for
a Windows version for us.

2520. Re: [DAWG-HSMM] MESH Map

Yahoo group: DAWG-HSMM
Date: 2012-05-08 11:42:52 UTC
From: Bob Diepenbrock
Topic: 2508 Message: 2520

I don't know about any up to date map, but I'm pretty sure that if you are near Bob Woodruff park (down in the hole) there will be little in view for you. I know of a few nodes which are active in Richardson near the hospital on Renner and the tollway but they are generally on high gain antennas not pointed in your direction or they are using the stock antennas.

In order to get much more than about 300' out of these things you will need some gain over the stock antennas. I've heard tales of getting 1/4 mile, but this is going to be the exception rather than the rule. Gain can be had with antennas and/or amps but all the gain in the world will not help if the RF must go though structures, trees and ground. At 2 Gig Hz it is pretty much going to be line of sight, and sometimes not even that.

If you start playing with high gain antennas, please be careful to review RF safety rules. Gain antennas and RF amps can quickly get you into field strengths that require caution at 2 GHz when handling antennas. It's unlikely to be a problem, but a little caution is warranted because we are very close to the ideal Microwave cooking frequency (2.4 or so GHz), and eye dammage is possible with even modest amounts of gain. See the FCC's website on RF Safety if you plan to start using much gain with these things

I've heard that there are a few repeater sites that are starting to put up HSMM nodes, but I've not had any luck getting connected to them. I'm guessing that most repeater sites are going to be cluttered from an RF perspective and unless one provides quite a bit of gain and a more omni diretional antenna setup, these will be hard to hit from any kind of distance even if you can see it just fine.

Keep trying and I'll try to look for your nodes nextime I'm in the park if I can get portable with some of mine.

2523. Adgenda for Digital Tuesday, 5/15

Yahoo group: DAWG-HSMM
Date: 2012-05-14 20:28:36 UTC
From: Rusty Haddock
Topic: 2523 Message: 2523

Hi again!

With the lack of anything better to talk about for Tuesday night, I thought I'd run through the talk I gave at Cowtown Hamfest, probably with a few additions and/or changes; maybe you'll give me some more ideas. :-) This will be the talk I plan on giving at HamCom in place of the advanced configuration presentation I gave last year. It's entitled something like "Applications and Accessories for the Mesh". At Cowtown it turned into a really good session with a lot of back and forth between myself and the audience and probably won't be much different with this group. If you missed this talk and can't wait for (or won't be attending) HamCom then join us Tuesday night at Digital Tuesday.

Same Bat-Time: 7:00pm

Same Bat-Location: 299 Connor Ln, Lucas, TX
Come down the driveway, through the back gate,
and around back to the pool house.

Bat-Map: http://tinyurl.com/3pw5fvq

Bat-Repeater: Talk-in will be on the Plano repeater, 147.180+ PL107.2

See you there!

Hmmmm...

$10/month for text messages from anywhere? Nice....

I can understand folks might find this useful, but it is really just texts
and it seems from reading the descriptions it can take awhile to actually
get the message out and a confirm back.

Call me when we can get DSL speeds for $10/month anywhere in the world.. :)

2528. Ham Homestead for sale, McKinney (Melissa) Texas

Yahoo group: DAWG-HSMM
Date: 2012-05-28 16:15:45 UTC
From: N0RQ-lists
Topic: 2528 Message: 2528

Back on the market -- please share with anyone that might be interested in a ham homestead just north of McKinney.

My 12 acre plot with an 11-year-old home and barn is on the market, and so I'm mentioning it here in advance as for sale by owner, before we list it with our agent.

The property is in Melissa, TX, just 8 easy miles to the heart of McKinney (intersection of 75&380).

Included is 12.3 acres, 2715 sq.ft. home, large barn, and 60' Trylon tower with antennas, multiple runs of LMR-600, and plenty of space to put up whatever else you'd like!

More details at <http://www.melissaacres.com/> www.MelissaAcres.com .
Please email me with questions (mycallsign <at> att.net), or use the Contact form on the web site.

ALSO, some ham stuff for sale: www.powerlinenoise.com/for-sale/

Dave Dunbar, N0RQ
<http://www.melissaacres.com/> www.MelissaAcres.com
(Apologies if this is off-topic for the list, but this should be the last time it is mentioned.)

2530. Digital Tuesday, June 5th

Yahoo group: DAWG-HSMM
Date: 2012-06-05 06:39:02 UTC
From: Rusty Haddock
Topic: 2530 Message: 2530

Up for discussion will be:

o Kip's trip to Dayton.

o Helping with HamCom.

o How to get your mesh's internet connection going again.
(yeah, it's broke!)

o A new HSMM-MESH firmware patch that's in beta-test.

o Building "lollipops" (for getting a WRT54G above everyone's head).

Along with the usual question and answer session, I'm sure, so come join
us for Digital Tuesday!

Same Bat-Time: 7:00pm

Same Bat-Location: 299 Connor Ln, Lucas, TX
Come down the driveway, through the back gate, and around to the
pool house.

Bat-Map: http://tinyurl.com/3pw5fvq

Bat-Repeater: Talk-in will be on the Plano repeater, 147.180+ PL107.2

See you there!

2532. Exterrnal antenna on WRT54

Yahoo group: DAWG-HSMM
Date: 2012-06-06 12:49:22 UTC
From: Larry
Topic: 2532 Message: 2532

I have a question regarding the antenna setup on the WRT54.
When using an outside antenna do you program the "RX ant-right" and the "TX ant-right" and connect the external antenna to the right jack; or do you leave the antennas on Diversity?
If you leave the antenna on Diversity what do you use on the left antenna jack?

Can somesone explain the proper setup?

Thanks,
Larry, W5NCD

2533. Re: [DAWG-HSMM] Exterrnal antenna on WRT54

Sure. First you have to determine which is right antenna and which is left antenna. Lower the power and try one then the other. The one with the antenna will have a better SNR. Linksys was not consistent between versions as to which side was right and which side was left.

If you only have one antenna, turn that one on and do not do diversity. I see a 3 db gain with one antenna over dual antennas.

Usually I leave the factory antenna on the unused side in case you accidentally go back to diversity or switch sides. It will at least have somewhat of a load.

Kip

2534. Re: [DAWG-HSMM] Exterrnal antenna on WRT54

Yahoo group: DAWG-HSMM
Date: 2012-06-07 10:09:59 UTC
From: Tommy Davis
Topic: 2532 Message: 2534

Both sides are TX and RX. You TX and RX both at
the same time unless you use Diversity setting.
If you use Diversity mode you need to test side
you "think is right or left". Some versions right
and left is viewing from the front and some are from the back. Go figure...

http://www.arrl.org/news/papers-requested-for-arrl-tapr-digital-communications-conference
Papers Requested for ARRL/TAPR Digital Communications Conference

06/01/2012
Amateurs are invited to submit technical papers for presentation at the 31st Annual ARRL and TAPR Digital Communications Conference to be held September 21-23, 2012 at the Sheraton Gateway Airport Hotel in Atlanta, Georgia.
These papers will also be published in the Conference Proceedings (you do not need to attend the conference to have your paper included in the Proceedings).
The submission deadline is July 31. Please send papers to: Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111. Or you can make your submission via e-mail to: maty@....

For more information about the conference, see the Tucson Amateur Packet Radio www.tapr.org/dcc, or call 972- 671-8277.

And if your gateway has lost its Internet connectivity you can download
the patch from http://hsmm-mesh.org/software-download.html. The full
0.4.3 firmware load can be downloaded there also.

Scott,
It's you. :-) You probably need to force your browser to reload or
clear your browser's cache. The files are there!

The full down load seems to work.

The updates may download multiple patches. The multiple patchs should load in order. All the pending patches should be down loaded. When they are all down loaded, your firmware should be the exact same bytes as if you did a full load.

Loading patches is different than doing a full down load. If done properly, your settings should be preserved. A full down load will erase any custom settings you have made. If patches are properly loaded, you should have the same firmware load as if you did a full load.

.bin files are required by the original Linksys loader. The Linksys loader will not down load .trx files. Once you have mesh fimrware loaded, you should be able to load the .trx binaries to load from then on.

I hope this helps.

Thanks Glen. I thought I had flushed the cache, etc, but a reboot fixed it. Now all I see are the 0.43 versions as you noted

Question: to use the .tgz patches, just d/l and point the mesh node at it (as if you were ref lashing it for the first time?).

From: Todd Caldwell
Topic: 2545 Message: 2545

Hi folks,

I had an update go bad on me. I have a node that I can ssh into, but it won't come up as a mesh node.

Are there instructions on how to fix this via the command line posted somewhere ?

Thanks,

Todd Caldwell - K5SLR

Take a look at this web page and the TFTP recovery method.

http://www.dd-wrt.com/wiki/index.php/Recover_from_a_Bad_Flash#Recovering_with_TFTP

You should probably download the original linksys .bin file to put the router back to factory, and then attempt the update to a mesh node again.

Be sure to make note of the ip address of the router. If you can ssh into it you should be able to tftp into it with that address.

Good luck.

Scott

Update as in patch or a full firmware load? A little more description
would be helpful as I stopped reading minds after... well, it's been
a while.

Remember on the full load that the router comes up as an access point
with an SSID of MESHNODE. At this point, you connect to its webserver,
preferably via a LAN port.

>Are there instructions on how to fix this via the command line posted

The instructions for loading the full firmware are in the User Documents
section on hsmm-mesh.org

Further investigation is showing it's not as bad as I thought initially. RF side is still up. LAN is not where I expected due to some experimentation that persisted when I thought it hadn't.

I'm trying to install the patches from 0.4.0 up to 0.4.3. Looks like they are WAY slower to install than I though. At least the 0.4.1 patch.

Got 0.4.1 installed, trying 0.4.2 now. Several minutes in and counting.

If you haven't heard, weren't at our HamCom presentations, or haven't been reading this mailing list, there's a new patch that's been released which that brings our nodes upto version 0.4.3. There's also a full load available as well. This is definitely needed by your gateway node(s)!

Tuesday night we'll go over:

1) The new 0.4.3 patch/release: what got fixed and how to get it loaded into your router.
2) What went on at HamCom, HSMM-wise... and we'll do it with the lights on!
3) Fresnel Zone by the numbers. Not a technical treatise per se but I will go over the numbers. I'm thinking this will be a whiteboard presentation and I'll bring mine.

Hopefully we'll have some folks that are new to HSMM-MESH stop by and we'll try to get their questions answered as well.

Same Bat-Time: 7:00pm

Same Bat-Location: 299 Connor Ln, Lucas, TX
Come down the driveway, through the back gate,
and around back to the pool house.

2552. LAN problems with WRT54G V1.1, Firmware Version 0.4.3

Yahoo group: DAWG-HSMM
Date: 2012-06-25 22:34:11 UTC
From: kauffmannkd
Topic: 2552 Message: 2552

A fellow ham tried to load HSMM-MESH firmware versions 0.4.2 and 0.4.3 on a WRT54G V1.1.

The WRT54G V1.1 is new to him, and did not have an earlier HSMM-MESH firmware load.

We can communicate with the node menus through the mesh link, but PCs connected to the LAN ports do not get addresses though DHCP, and can not communicate with a hard coded address. (I can not get to the menus through the WAN port, but I am able to SSH into the router through the WAN port address).

I believe that the network config may be in error.

I have copied the 'network' file from /etc/config here:

```
BusyBox v1.4.2 (2008-08-04 21:28:11 CDT) Built-in shell (ash)
Enter 'help' for a list of built-in commands.

_______ ________ __
| |.-----.-----.-----.| | | |.----.| |_
| - || _ | -__| || | | || _|| _|
|_______|| __|_____|__|__||________||__| |____|
|__| W I R E L E S S F R E E D O M
KAMIKAZE 7.09 -------------------------------------
* 10 oz Vodka Shake well with ice and strain
* 10 oz Triple sec mixture into 10 shot glasses.
* 10 oz lime juice Salute!

ad5oo build 126 version 0.4.3
---------------------------------------------------
root@W4DTB-1:~# cd /etc/config
root@W4DTB-1:/etc/config# cat network
#### VLAN configuration
config switch eth0
option vlan0 "1 2 3 4 5*"
option vlan1 "0 5"

#### Loopback configuration
config interface loopback
option ifname "lo"
option proto static
option ipaddr 127.0.0.1
option netmask 255.0.0.0

#### LAN configuration
config interface lan
option ifname "eth0.0"
option proto static
option ipaddr 172.27.30.1
```

```
option netmask 255.255.255.0
option dns "8.8.8.8 8.8.4.4"

#### WAN configuration
config interface wan
option ifname "eth0.1"
option proto dhcp

#### WIFI configuration
config interface wifi
option ifname "wl0"
option proto static
option ipaddr 10.163.43.24
option netmask 255.0.0.0

root@W4DTB-1:/etc/config#
```

It is similar to the "network' file from a working WRT54GL, but is significantly different in the "config switch' area, where my working WRT54GL has:

```
config switch eth0
option vlan0 "0 1 2 3 5*"
option vlan1 "4 5"
```

I believe that these values are being set by /etc/init.d/netconfig

I queried some of the NVRAM settings, and determined that for the non-working WRT54G, the Model is a "Linksys WRT54G V1.x", the Boardtype is a "bcm94710dev", and the Boardnum is "42". Given those NVRAM values, the vlan0 and vlan1 are set to

```
config switch eth0
option vlan0 "1 2 3 4 5*"
option vlan1 "0 5"
```

For the working WRT54GL, the Model is "Linksys WRT54G/GS/GL", the Boardtype is "0x0467", and the Boardnum is "42". Given those values, /etc/init.d/netconfig sets the values to

```
config switch eth0
option vlan0 "0 1 2 3 5*"
option vlan1 "4 5"
```

I searched the web on "bcm94710dev Openwrt WRT54G " and ran across this post:

https://dev.openwrt.org/browser/trunk/openwrt/target/linux/package/base-files/files/brcm-2.4/etc/init.d/S05nvram?rev=2993

which shows some changes between White Russian and Kamikaze that required some fix up. The changes were made to /etc/network.overrides, and contained the following:

```
69
70 # linksys bug; remove when not using static configuration for lan
71 nvram set lan_proto="static"
72
73 # hacks for wrt54g 1.x hardware
```

```
74 [ "$(nvram get boardnum)" = "42" \
75 -a "$(nvram get boardtype)" = "bcm94710dev" ] && {
76 debug "### wrt54g 1.x hack ###"
77 nvram set vlan1hwname="et0"
78 nvram set vlan2hwname="et0"
79 remap eth0 vlan2
80 remap eth1 vlan1
81 }
82
```

I note that in the WRT54G V1.1 router, the vlan2hwname variable is not set, while vlan0hwname, and vlan1hwname are both set to "et0". (using nvram get ....)

Does someone have a working HSMM-MESH 0.4.x version running on a WRT54G V1.1, and if so, can you tell me what your /etc/config/network file looks like?

Thank you,
Ken - KR4FM

2553. Re: LAN problems with WRT54G V1.1, Firmware Version 0.4.3

Yahoo group: DAWG-HSMM
Date: 2012-06-27 20:51:51 UTC
From: kauffmannkd
Topic: 2552 Message: 2553

After reading through various posts on the web, I have come up with a temporary solution.

The WRT54G V1.1 is an odd duck in that is uses legacy code from the original driver, and offers less flexibility in the definition of vlans. There are a number of fix-ups that occur in the OpenWrt versions that occur after the one used by the HSMM-MESH firmware.

Effectively, in V1.1 the WAN is vlan1, and the LAN is vlan2. Wireless is eth2.

My temporary fix involves setting two nvram variables, and modifying the /etc/config/network file (and the _setup files that recreate it)

The first nvram variable establishes vlan2.
nvram set vlan2hwname="et0"
The second nvram variable is really a modification of a existing one
nvram set lan_ifnames="vlan0 vlan1 vlan2 eth2"

(the contents of lan_ifnames before the modification was "vlan0 eth1 eth2 eth3")

I did an "nvram commit" after the above changes.

The modified /etc/config/network follows:

```
root@W4DTB-1:/etc/config# cat network
#### VLAN configuration
config switch eth0
option vlan2 "1 2 3 4 5*"
option vlan1 "0 5"

#### Loopback configuration
config interface loopback
option ifname "lo"
option proto static
option ipaddr 127.0.0.1
option netmask 255.0.0.0

#### LAN configuration
config interface lan
option ifname "eth0.2"
option proto static
option ipaddr 172.27.30.1
option netmask 255.255.255.0
option dns "8.8.8.8 8.8.4.4"

#### WAN configuration
config interface wan
option ifname "eth0.1"
option proto dhcp
```

```
#### WIFI configuration
config interface wifi
option ifname "wl0"
option proto static
option ipaddr 10.163.43.24
option netmask 255.0.0.0

root@W4DTB-1:/etc/config# nvram get lan_ifnames
vlan0 vlan1 vlan2 eth2
root@W4DTB-1:/etc/config# nvram show | grep vlan.*hwname
vlan2hwname=et0
vlan1hwname=et0
vlan0hwname=et0
size: 26614 bytes (6154 left)
root@W4DTB-1:/etc/config#
```

Note that the big change to the "network" file is changing "vlan0" to "vlan2" in "Config switch eth0" and changing "eth0.0" to "eth0.2" in the LAN configuration. Also note that the WRT54G ports that are used for the LAN and WAN actually do change between V1.1 and V2.0 (and beyond.)

I also modified the html in /www/cgi-bin/ports and /www/cgi-bin/status, by changing every instance of "eth0.0" to "eth0.2"

I fully realize that these changes are a total hack, and will probably not survive changes that are made through the configuration menus. They do currently survive a reboot. I do have access to the WAN and LAN ports, and PCs connected to the LAN ports are able to communicate across the mesh.

I am not wedded to these changes, and would gladly implement a better fix.

Thanks,
Ken - KR4FM

Keep in mind that DHCP addresses are requested by the client (your PC) and
not just forced out. I have found that, at least with some versions of
Linux, you may have to pull out the ethernet cable and replace it before
the PC realizes something's changed (like when your router reboots).
This may also vary according to the ethernet adapter in your PC.

>I believe that the network config may be in error.

Why???

>I have copied the 'network' file from /etc/config here:

Looks just like the one in my WRT54G v1.1 except for my WAN is disabled
and the WIFI ipaddress is different, naturally. My v1.1 is running just
fine with the stock firmware.

>It is similar to the "network' file from a working WRT54GL, but
>is significantly different in the "config switch' area, where my
>working WRT54GL has:

That's correct -- and it should be. This file gets written slightly
differently depending on which version of hardware the firmware is
running.

Unless you've got a V1.1 that's got "odd" hardware in it I'm not seeing
the need for this "solution".

What's the output from the command 'get_model' and 'nvram get boardtype' ??

2556. July 3rd meeting of Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2012-06-28 03:34:25 UTC
From: Rusty Haddock
Topic: 2556 Message: 2556

Given that Kip is out of the country (out of his mind too but that's another story :-) and given it's close proximity to Independence Day, the 1st Tuesday meeting of Digital Tuesday for July has been cancelled.

The next meeting is currently planned to be held on July 17th, the third Tuesday of July. Hope to see y'all there! ... well, at least as many as we can fit into the pool house.

Hope y'all have a SAFE and enjoyable 4th of July!

73
-Rusty-

Doug & Kip: can the reminder be turned off or changed for next week's meeting? Also, the PARK schedule should be changed as well. TNX!

From: kauffmannkd
Topic: 2552 Message: 2557

Rusty,

Thank you for responding to my request.

I am pleased to hear that the standard 0.4.3 load is working on your WRT54G V1.1 router.

I don't know what kind of abuse this router suffered before my friend purchased it. All that I can say is that the standard 0.4.3 and 0.4.2 firmwares did not work with it.

The get_model does correctly identify a WRT54G V1.1, and the "nvram get [boardtype] does correctly identify a "bcm94710dev", as noted in the original post.

As far as I can tell, the _setup... scripts in /etc/config.mesh/ do not make any distinctions regarding the board type. In any case, the fact that yours works seems to point elsewhere.

Obviously, we would prefer to run the standard firmware if we could. We only made the changes because the Lan ports were unconnected without them.

When I researched the OpenWrt forums, and the web, the changes typically addressed the definition of vlan2/eth0 in V1.1, and how everything was translated to vlan0 in later versions.

As I noted in the original post, an "nvram get lan_ifnames" returned "vlan0 eth1 eth2 eth3", before I modified it to include vlan1 and vlan2.

If it is not too much trouble, could I ask you to tell me what you see from the same command?

Thank you,
Ken - KR4FM

I have seen bad wiring cause the death of router ports. I s'pose the question is "Do the LAN ports work with the default Linksys firmware?" Another question might be "Does your PC's ethernet socket indicate that a link is present when you attach the cable to it and the '54G's LAN port?"

>The get_model does correctly identify a WRT54G V1.1, and the

OK, same as mine.

>As far as I can tell, the _setup... scripts in /etc/config.mesh/
>do not make any distinctions regarding the board type. In any case,
>the fact that yours works seems to point elsewhere.

The _setup "scripts" are not scripts, per se, but simply variable settings. The place that the board type is used to setup the network file is in /etc/init.d/netconfig.

>Obviously, we would prefer to run the standard firmware if we could.
>We only made the changes because the Lan ports were unconnected

>
>If it is not too much trouble, could I ask you to tell me what you see from the same command?

```
root@ae5ae-base1:/etc/init.d# nvram get lan_ifnames
eth0 eth2 eth3 eth4
root@ae5ae-base1:/etc/init.d#
```

Although, I did grep the entire filesystem and couldn't find an instance where lan_ifnames is used...

I'll cc: David Rivenberg and see what he thinks.

I'd like to see some tutoring at one of our meeting on getting the WRT54 to function as an ARRS I gate. There are several programs that are out there to do this, but some guidance to the lower echelon of us is needed. Something like <http://wiki.ham.fi/Aprx.en> seems to be one that has been talked about. I'm sure there are others.

There are events we do that this could come in very handy in the boonies.

As I said in my earlier message to the list, and to remind everyone,
this meeting has been CANCELLED!!! The plan is to resume on the
third Tuesday of July, the 17th, same Bat-Time, same Bat-Channel.

From: "Jim Kinter Jr." <jim@...>
Subject: [Austin_HSMM_Development] FINALLY GOT A VIDEO TO WORK!
Date: Tue, 03 Jul 2012 23:11:16 -0500

On the main www.hsmm-mesh.org site, under HSMM Files is a listing to
Kipster's 2012 Hamcomm presentation video !!

Direct Link:
http://www.hsmm-mesh.org/documentation/133-ae5ib-intro-to-hsmm-mesh-2012-hamcomm.html

I finally got the combo of codecs and youtube's preferences to jive
and got it uploaded/converted whatever, and then embedded into a page
on our main site.

Now that I know what it wants, I will go ahead and grab Glenn's off
the camera. Expect it by the end of this weekend.....

Pass the word to other groups that I may not be a member of (yet), or
anyone who needs a good Introduction presentation video

2563. WRT54G Cap

Yahoo group: DAWG-HSMM
Date: 2012-07-07 20:09:34 UTC
From: Frank Roesch
Topic: 2563 Message: 2563

Is there a location that will show me what capacitor to use on the input power connection of the 54G for POE.

Thank You,

Frank Roesch - K5FER

Rowlett, TX.

2564. Re: [DAWG-HSMM] WRT54G Cap

Yahoo group: DAWG-HSMM
Date: 2012-07-07 20:18:23 UTC
From: Todd Caldwell
Topic: 2563 Message: 2564

If you mean the cap you want to add if you're deploying your node on a long PoE cable, then you want about 10,000 uF.

If the original case is to be used, I suggest 3 x 3300 uF (25 or 35V) in parallel. These will fit in most of the WRT54G cases.

I usually just solder leads onto the bottom side of the board at the power connector. Do be careful of polarity of course. Filling the router case with metal confetti is bad for it.

I should also note that if you mean to mod the router so that you can do PoE without using an external device/adapter to separate the power and ethernet lines, you will likely find that the ethernet jacks on the WRT54Gs all seem to have 150 ohm resistors (value from memory - it's 150 or 75 I think) across the pairs you would normally use for power. This will cause a small amount of extra power consumption. 1 to 2 Watts.

There are cheap PoE adapter pairs on eBay if you search a bit. I've been able to buy them for about $3 a pair, shipped. That's from Taiwan or China, so you're looking at 1-3 weeks for shipping. You still need the capacitor if you use a long cable, but the installation might be a little cleaner and easier to maintain with the adapters. If you want, the caps can be installed externally this way. Just make up a small cable with a male DC connector on one end and a female on the other, and the caps in the middle.

If you plan to do the internal PoE mod, and don't mind the power loss due to the internal resistor, take a look here:
http://www.techidiots.net/project-pages/wrt54gs-poe-12v-mod/

Todd

ps - sorry for all the HTML junk in my first reply. Eudora doesn't deal with that very gracefully at times.

Due to Kip spending an extra week in Taipei we'll have to either cancel
or postpone this coming Tuesday's meeting.

My question is what would you like to do:
1) Just cancel and our next meeting will be Aug 7th?
or 2) Postpone another week and have our meeting on the 24th?

Please let me know and I'll make an announcement in a few days.

Sorry about this. I was expecting to be back today and the big boss wants us to stay another week. My Inlaws are happy to let me use the pool house, but having a meeting there with me not present is pushing it.

Hope everybody understands. When I get back I will have worked for Flextronics in the U.S. fewer weeks than out of country.

Kip

Sent: Friday, July 13, 2012 10:16 AM
Subject: [tapr-announce] Write for PSR

The next issue of TAPR's quarterly newsletter, PSR, is the works and this is a call for contributions to the pre-DCC installment of the newsletter.

Anything digital and radio related are potential PSR articles.

Write about...

...Your latest hardware or software project.

...Your experience with TAPR HPSDR projects.

...Your experience with TAPR timing projects.

...Your past Hamvention experience.

...Your past DCC
(Digital Communications Conference) experience.

...You write it and we may publish it

By the way, every article you write that we publish extends your TAPR membership by three months!

The deadline for the next PSR is August 15. Please write early and write often.

73,

WA1LOU - your PSR editor

I am starting to get into HSMM and I have a BEFW11S4 Linksys router to play with. I read on another email that this unit could be used for HSMM to access mesh but could not act as a main node(rpt) in a mesh system. I looked at HSMM-MESH.org for firm ware to this unit but could not find any. Any help would be appreciated. Thanks

>at HSMM-MESH.org for firm ware to this unit but could not find any. Any help
>would be appreciated. Thanks

The BEFW11S4 is an 802.11b-only wireless router and is rather old.
HSMM-MESH firmware does not support this model from Linksys and thusly
it can not be a node on the mesh. Even a base configuration of OpenWRT
can not run on this 'beast' due to the lack of FLASH memory and RAM.

This router COULD be used to provide wireless (albiet 802.11b) to a mesh
when used in conjunction with a pre-existing WRT54 running the HSMM-MESH
firmware but that's about all. I say this because the usual access to
an HSMM-MESH is done via the LAN ports on a mesh node, not wirelessly.
By plugging in a wireless router into a node's LAN port and having it
operate on a different WiFi channel, you have wireless access to the mesh.

Finding a hardware version 1 through 4 of a WRT54G or WRT54GS or any
version of the WRT54GL will be your best bet if you want to get started
with HSMM-MESH.

Well, what have YOU done during your July vacation from Digital Tuesday???

Per a request or two, I'm working on getting 'APRX' to run on one of my '54Gs. APRX is a small program that works like a listen-only i-gate for APRS. Aside from the obvious software and getting it configured, you'll need at least a 2m receiver (with antenna), TNC, and an RS232-to-TTL serial converter. TNC's using USB won't be particularly useful unless you've done the USB mod to your WRT54G.

If I can actually get packets passed from off the air to aprs.fi I'll bring my gear to show you how to hook it up. It really shouldn't be terribly difficult ESPECIALLY for someone with a ham license, extra class included! :-)

A couple of other items to make plans about:

o Preparations for the Plano Balloon Fest scheduled for
Sept. 21-23.
o Moving our meetings to another location, possibly the
Sci-Tech Center in Frisco or a McKinney firehouse
community room. Other suggestions?
o Changing to a schedule of monthly meetings.

So, bring your summer projects, questions, ideas and suggestions as we return to Digital Tuesday, tomorrow night, August 7th.

Same Bat-Time: 7:00pm

Same Bat-Location: 299 Connor Ln, Lucas, TX
Come down the driveway, through the back gate, and around back
to the pool house.

Bat-Map: http://tinyurl.com/3pw5fvq

Bat-Repeater: Talk-in will be on the Plano repeater, 147.180+ PL107.2

See you there!

-Rusty-

P.S. If you need some Belkin power supplies, email me DIRECTLY so I can get some cleaned up and charged for sale.

OK, an update from last night for those not in attendance:

1) I was able to get APRX was working on the WRT54G and it passed a fair number of received APRS packets upto the APRS Server in Finland. Alas, this didn't last all night. This may be a configuration issue on my part, possibly I should upgrade to a newer version. Clearly, I have a non-hardware issue or two having to do with the serial port on the WRT54G. I'll continue to tinker with this and if and when I get something going that I feel is solid enough for the masses I'll package it up for our uses and knock out a neat and tidy set of installation instructions. Stay tuned but it won't be coming real soon.

BTW, the TTL-to-RS-232 conversion board I'm using came from Sparkfun.com as a kit. No surface mount -- just a couple of transistors, caps, diodes, resistors, and DB-9 board mount connector. I've personally dealt with them a number of times with good results and they are just two or three days away via UPS Ground, up in Boulder, Colorado. Part number is PRT-00133 and runs under US$7 for 1 to 10 units.
https://www.sparkfun.com/products/133

Anyone else needing a portable APRS I-Gate, say for an event, where a local I-Gate isn't available or in good range?

2) We decided that Digital Tuesday will be cut back to monthly meetings. That'll take a load off of myself for talks and other things to chat about. :-) The actual schedule is still up in the air about which Tuesday we will stick to, first or third, but we will definitely **NOT** be having a second meeting in the month of August.

We have had some suggestions from folks that attend Dallas ARC meetings that we move from the first Tuesday as that is their meeting nights. Second Tuesday is out because that's McKinney's meeting night and a good portion of DigiTuesday attendees are members there as well. Any suggestions?

KD5OUG, would you please delete the second monthly meeting notices on Yahoo?? We'll work on a new schedule.

3) Our next meeting will be held SATURDAY, September 8th at 9am and we'll be meeting in or near the parking lot for the "Oak Point Park and Nature Preserve" off E. Spring Creek Pkwy, across from the Collin College Sprink Creek campus. The location should be near the place the operations trailer was parked at last year's Plano Balloon Fest. More details and maps in a few weeks.

This meeting will be held to facilitate planning and setup for the 2012 Plano Balloon Fest later in September so please bring the equipment you can loan or use for the Fest.

4) We're also going to look for another place to meet. This is due to Kip's new job requiring him to travel quite a bit. While we have been, and continue to be, welcome to use his in-laws' pool house for our meetings, it is felt that it would be best to have another place to meet, particularly when Kip is out of town on travel during meeting night and this could be happening fairly often. Lucas FD is out because of their meetings on Tuesday nights.

We'll be investigating the possibility of meeting at the main firehouse in Allen (this seems to be relatively central to attending members). I can also secure a community room at any of the McKinney firehouses that have one. Any suggestions that don't cost an arm and leg? Internet access would be nice but not always essential. This is not an immediate need since we won't be holding another meeting this month and September's meeting will be near the Balloon Fest site. Still,

See you next month... but feel free to continue bringing up most anythging HSMM-MESH related on this mailing list.

2583. September 8th meeting/activity

Yahoo group: DAWG-HSMM
Date: 2012-09-04 21:32:54 UTC
From: Rusty Haddock
Topic: 2583 Message: 2583

OK folks, September 8th, Saturday morning at 9am, will be our next meeting of "Digital Tuesday". The activity will be to place our routers around the PBF ground in order to provide alternate paths should the main link to church go down or get blocked. Consider this a dress rehearsal for the PBF. How we do this will depend on the amount of gear that will be available on September 21-23.

Please bring your laptop and any other gear you will need to deploy your node. I will bring one, possibly two, tents and at least one small table. Pleae bring your own chairs.

Two things I need from you folks:

1) An email with your commitment of showing up on Saturday morning. If I receive none then I will cancel the exercise because it costs me a bit of gasoline to travel down to Plano from Van Alstyne and back. I really don't want to waste such a precious resource if I can't get anyone to commit to the exercise. Current Wx forecast is for a high of 88?F on Saturday so it should be cool enough especially in the AM. I will need email or phone calls by Friday at noon, please.

2) We will also need commitments for equipment for the Balloon Fest on Sept 21-23. Router and power supply/battery should be within some sort of weather tight enclosure should we get precipitation like we did last year. Unlike showing up on Saturday morning I can be more relaxed on the commitment but... what's the sense in doing this activity with more equipment than we'll have available for the event???

Please let me know if you will show up on Saturday morning. The location will be the southeast-most parking lot of the Oak Point Ampitheater, across Spring Creek Pkwy from the Collin County Community College. Map centered on meeting location is here: http://goo.gl/maps/YzlPi Talk-in will be on the PARK 2m repeater, 147.180+ PL 107.2.

And if I haven't repeated this enough, there will be NO DigiTuesday meeting tonight.

has been CANCELLED. Since no commitments to show up were received for
this event, I'm not going to waste my time and gasoline to drive the 30+
miles each way to see if anyone else shows up.

For those that couldn't make this event but volunteered equipment for the
Balloon Fest, I offer a hearty "Thank You". Kip and I will see what we
can do with your equipment when we do initial setup on the 19th or 20th.

John - N5TIM wrote:
>Well ... it looks like another Tuesday with withdrawal pains.
>Any luck on an alternate meeting location?

Sorry for the withdrawl pains John. No, I don't get down by/through
Allen much to check on Firehouse #1.

David Spratt and I were talking at the McKinney ARC meeting last night
and we both felt that a meeting next Tuesday would be good. This will
be more of a planning and social gathering although I'm more than willing
to answer questions as best I can. I'm not planning on bringing a laptop
nor a node. Beginners are welcome to join in as well.

What we'd like to do is decide how Digital Tuesday continues. Certainly
we're down to once a month but still in search of an alternate location,
maybe two.

We'd also like to plan an outing or two, before it gets too chilly,
to replicate and explore solutions to the problems we had at the Plano
Balloon Fest (PBF) last month. If we ever deploy again to an event or
an emergency situation to provide networking service to those serving,
and this was the main reason for creating HSMM-MESH, then we need to learn
how to deal with situations like what we tried to deal with at the PBF.

For next week's meeting, let's plan on meeting at Scotty P's Hamburgers
in Allen next Tuesday (3rd Tuesday) at the usual time, 7pm. If needed,
they have a back room, but we can always pull together a few tables
if enough people show up. Scotty P's is in the northwest corner of
McDermott and US75 in Allen. Look for the Hobby Lobby and go east along
the shopping center from there.

Talk-in on the Plano ARK repeater, 147.180+ PL/107.2.
See you there!

2592. New Mesh Nodes

Yahoo group: DAWG-HSMM
Date: 2012-11-26 20:57:54 UTC
From: ims8002004
Topic: 2592 Message: 2592

I haven't posted here before, so I thought I would let everyone in the group know that I just placed three HSMM-MESH nodes up on the air. They are currently running on the stock WRT54GS antenna's, but will soon be upgraded to weatherproof boxes on the roof of each location and higher gain antenna's. The locations are noted on the http://www.hsmm-mesh.org google map for reference. If there is anyone that may be within range of these sites let me know and I can try to get an antenna pointed your way in hopes of establishing a link. I am limited on antenna selection on the KC5DFC-75 node at this time (HOA) but the others (KC5DFC-76 and KC5DFC-77) could be set up with any reasonable type radiator. I have a 24dB magnesium parabolic on hand, two different gain Rootenna's, along with a few smaller omni's. I can achieve @22' AGL at these sites at this point in time. I would like to get the three nodes meshed up but preliminary investigation of the terrain between them with Radio Mobile doesn't yield very promising results. If there are any meshers in South Wylie/Sachse/North Rowlett there might be a chance...

Thanks,
Ian Stubbs
KC5DFC

2593. Another DigiTuesday meeting?

2598. Hardware selection

Yahoo group: DAWG-HSMM
Date: 2012-11-29 16:58:24 UTC
From: Michael Griego
Topic: 2598 Message: 2598

Hey everyone. I'm Mike (KE5CVQ). I'm new to this group, so I thought I'd introduce myself first… Been licensed since about 2004, but I had been out of the game until recently.

Anyway, I was curious if most of the people here were still using the WRT54GL as the hardware platform of choice for their HSMM mesh nodes. From what I can tell, they look like they're still the best supported, and I see Newegg still carries them for $49.99…

Also, is there a current topology map anywhere for the nodes around the North Dallas/Far North Dallas area?

Welcome Mike ! The wrt54g is the most common supported hardware at this time. You can go to: http://hsmm-mesh.org/section-blog/37-hardware-faqs/101-supported-hardware.htmlto get more information on the WRT54 hardware.

There are better deals out there as far as cost; you just need to be aware of version information on the routers you purchase. Check Ebay or Amazon, but I normally won't by unless it is below or very close to $25. Of course it depends on your 'expendable' funds !

I'm sure others [read more qualified and active] will respond to your email.

Good luck.

Thanks! I did see a couple of used 54GLs on Amazon for around $25, but all the new ones seem to be at least $49. I'm very keen on getting a GL, because, if memory serves, they usually have a bit more RAM and flash storage than the base 54G's unless you get one of the really old models (besides being fully compatible).

Actually, that's not quite true. If you want models with more flash
and RAM you want to look for either the GS models, version 1 thru 3,
or a WRT54G-TM (for T-Mobile) as these units have the largest memories.
The GL is nothing more than a relabeled WRT54G, version 4, and has the
standard 16Meg of RAM w/ 4 Meg of Flash.

Print this PDF file and keep it handy when you're shopping next time!

http://www.hsmm-mesh.org/images/hsmm_docs/WRT54Shop.pdf

Something else to keep in mind is that the newer versions of each
model generally require less power to operate than its predecessor.
Keep this in mind if you plan to run off alternate energy sources
such as batteries and solar/wind/what have you.

And BTW, WELCOME to the group!

Old ones work just as well as the new ones.

Just because it is so very important, I'll repeat myself. Only certain versions are compatible with the HSMM firmware, so be very cognizant of that. I say that from personal experience.

Good Luck !

From: Michael Griego
Topic: 2598 Message: 2604

Yeah, I very much understand that. I've worked with DD-WRT before in other capacities (I'm actually a network engineer by day). You guys were right, though, I was confusing the S with the L. I think I just have the L stuck in my head since it was the only new/readily available model that retained good support for third party firmware.

Back to my other question, though. Is there a standing HSMM mesh network in the Far North Dallas area, or does the group tend to just create adhoc meshes for specific functions? If there is a standing mesh, is there a network topology graph anywhere?

Currently we adhoc meshes for specific functions, as you put it so eloquently. :)

OK, we're set for a Digital Tuesday gathering at the Van Alstyne campus of Grayson college at 7pm. Many thanks to Mr Wade Graves for making a room available to us!

As you can see below, Grayson co. ARES members have been invited so I'll probably have a little introduction for them. If you're new to HSMM-MESH then this would be a good time to jump into the fray and join us. If the members of the Collin Co. ARES/RACES/whatever would like to participate as well, they'd be welcome to join us (*IF* they can behave themselves :-).

Directions: Go north on US75 to Exit 51 (think "Area 51") to FM 121 or Van Alstyne Pkwy. At the traffic light go west (left), under US75, and continue past the Sonic. The main entrance to Grayson College is just less than one half mile west of US75 and on your left. It should be kinda obvious since there's nothing else around it and there's a large, divided entrance. The main entrance to the building is straight ahead.

Plans are for an introduction to HSMM-MESH, discussion of activities, show and tell if you got it, and general questions and answers.

See you there!

Subject: ARES training opportunity -- HSMM-MESH meeting in Van Alstyne next Tuesday

Good day everyone!

With our recent discussions of new technology, here is an opportunity to learn that's really close . . .

Mr. Rusty Haddock, the Collin HSMM-MESH leader/organizer, has asked to use a room at the Grayson College Van Alstyne Campus for a "Digital Tuesday" meeting next Tuesday, December 4th at 7pm. Rusty has invited any Grayson County ARES members who like to attend and ask questions about HSMM-MESH to please come.

I'm planning to be there and I hope y'all can come too. If you can attend, please enter the building through the main entrance and I'll be there to direct you to the correct room.

2610. Fwd: [BLT] 18.100 MHz PSK listeners wanted

Yahoo group: DAWG-HSMM
Date: 2012-12-15 03:04:50 UTC
From: Kilgore
Topic: 2610 Message: 2610

```
-------- Original Message --------
Subject: [BLT] 18.100 MHz PSK listeners wanted
Date: Fri, 14 Dec 2012 18:56:18 -0600
From: Thomas Krahn <thomas@...>
To: blt@... <blt@...>

N0D Flight To The End Of The World
Dec. 15th 2012, Covey Trails Airport Richmond TX - 4PM CST (22:00 UTC)

While the APRS network is always ready we'll need to push a little bit
for 17m shortwave listeners.
Please consider listening by yourself and forward it to all mailing
lists, forums and DX clusters of interest.
The PSK31 beacon on the BLT32 balloon will transmit on 18.100 MHz and
shows up at 700..800 Hz on the waterfall when you use USB.
The frequency may shift quite a bit due to temperature, so there is life
left and right of the center frequency. Check the announcements where it
actually is during the flight.
It will transmit packages of 3 positions in a row, then pause for
approximately 140 seconds. Then it starts over.

Here are some example packages so that you know what to expect:

$$N0D,490,060200,29.7252,-95.5078,84,HAB*EF3D
$$N0D,491,060438,29.7252,-95.5078,84,http://w5acm.net*119E
$$N0D,492,060508,29.7252,-95.5078,84,end of world*3671
(140 sec. pause)
$$N0D,500,060542,29.7252,-95.5078,84,HAB*A03C
$$N0D,501,060819,29.7252,-95.5078,84,http://w5acm.net*4513
$$N0D,502,060849,29.7252,-95.5078,84,end of world*0ACA
(140 sec. pause)
etc.

The comma separated columns are:
N0D = callsign
490 = Serial number of the packet. 0,1,2 will be transmitted, 3...9 are
pause.
060200 = 6:02:00 UTC time
29.7252 = latitude in decimals of degrees
-95.5078 = longitude in decimal degrees
84 = altitude in meters(!)
HAB, w5acm.net, end of world.. = comment
*EF3D = checksum

The 3 transmissions in a row give you a chance to tune your receiver and
PSK setup properly. In case you missed the first one, there are still
```

two transmissions left.

Reporting:
Of course you can always send an e-mail with the received strings to thomas@... but the preferred method is to submit the data to a server on the internet. It can be entered manually at http://kt5tk.tkrahn.com/blt32.html (or here: http://habitat.habhub.org/manual_upload/) but it's much easier if you install DOWNLOAD FLDIGI http://ukhas.org.uk/projects:dl-fldigi which automatically submits the position data to a central server (habitat). This is an extension of the famous fldigi software which is optimized and extended for balloon tracking. Please use exactly THIS dl-fldigi software because the original fldigi version cannot automatically send the strings to the server!

Very good instructions for setting up dl-fldigi can be found here:
http://ukhas.org.uk/guides:tracking_guide
http://projecthorus.org/?page_id=336

Note that instead of RTTY we're using PSK31

If everything works the position of the balloon should be displayed on the spacenear.us tracker:
http://spacenear.us/tracker/

It might be interesting if we could also get some data-points up at pskreporter.info
http://pskreporter.info/pskmap.html

Thanks in advance for your support!

Thomas

2611. Re: HSMM-MESH practical demo? (fwd)

Yahoo group: DAWG-HSMM
Date: 2013-01-14 21:41:10 UTC
From: Rusty Haddock
Topic: 2611 Message: 2611

Hey folks!

Is there anyone in the group that would be willing to help out
and come up to Sherman Muni airport with me a week from tomorrow? This is
the airport just south of downtown Sherman, off SH-11. Myself and the
rest of the gang have been asked to come up, present, and demo to the
Grayson co. ARES folks. They are looking to see how HSMM-MESH can be
a benefit to their ARES comms. I really could use a few more folks.

I was planning to give part of my 'Mesh Applications' talk (from
Cowtown and Hamcom this past year) along with a smattering of Kip's
intro talk for some of the theory. Still, the demonstrations would be
of the most benefit here. I have an IP camera, a TNC to hook to one of
my nodes, and a "lollipop".

Their meeting starts at 7pm although we are scheduled to start
around 7:30pm for about 45-minutes.

Please email me if you can come up and support the cause. We could
carpool from either my house in Van Alstyne or even Grayson Co. College
where our last meeting was held.

Thanks!

Rusty,

Thank you. What this will probably need to be is a sales pitch with some
practical applications demonstrated. The group you will be talking to will
be a mixture of some who attended our joint meeting and many who are not
very technically oriented. The larger group that's not very technically
oriented will dig in IF they see a benefit for our ARES communications.

What we are thinking is a smattering of theory overview and lots of
practical application -- this group needs to see how it can be used in a
situation -- your balloon festival part would appeal to them if you discuss
the benefits of how it worked for your group. If the guys can bring their
kits, set them up, and show how they can feed video and messages to each
other, that will hook the folks and convince them to learn more.

Rick -- any additional thoughts/observations?

Again Rusty, thank you very much for coming and doing the 45 minute presentation.

Rusty, I can go along - Tuesday 2nd correct? I will bring along a couple of mesh units with camera and IRC, but I don't have any gain antennas if you are thinking of setting up a remote location.

Anyone else is welcome to ride along with me, we can meet at the Allen/Fairview Village Mall at HW75 & Stacey road. We can pick Rusty up on the way.

Rusty and Doug, I cannot go tomorrow(Tuesday) evening. My elderly mother fell and broke her hip - surgery is tomorrow in Denton and I don't know when I will be free.

Do you need the camera(Linksys WVC-200) and node setup for the camera for the demo? If so, then maybe we can figure a way to get it to you tomorrow sometime.

You have a young mother??? :-)
Sorry to hear your elderly one broke her hip.

I have a DLink camera that we can use. Don't worry 'bout it. Get your
Mom taken care of!

Doug, do you want to meet me at the College around 6:15-6:30pm?
It shouldn't take 15-20 minutes, top, to drive up to the airport.

Anyone else that wanted to come along? Lemme know ASAP, if not sooner!

I will meet you at the college. Please look it up on Google maps an
send me a link to the location. What talk-in frequency?

I will stop for supper before then. Do you have any recommendations for
eating around there?

Doug

2620. Vulnerability in Cisco Linksys Router

Yahoo group: DAWG-HSMM
Date: 2013-01-22 19:46:35 UTC
From: n5sqa
Topic: 2620 Message: 2620

FYI

--Vulnerability in Cisco Linksys Router (January 17, 2013) Cisco has acknowledged that there is a vulnerability in a Linksys router that could be exploited to gain complete control of the device, which is used for wireless home networks. Cisco says that despite earlier reports suggesting that the flaw affects multiple models, it actually occurs only in the Linksys WRT54GL model. Cisco has developed a patch for the issue and is currently testing it. Until the fix is made available users are urged to ensure that they have configured their networks securely and that strangers and other untrusted individuals do not connect to the router with an Ethernet cable.

e-router

Keep in mind that this pertains to Cisco-Linksys's original firmware,
version 4.31.14. Until the actual method of attack is released, it
would be hard to say if this pertains to the OpenWrt release of firmware.

Note that OpenWrt (the version of Linux running under HSMM-MESH) is
NUMEROUS generations distant from the original sources that Linksys used.

Amateur Radio and Smart Phones - Convergence

On Saturday January 26, the Plano Amateur Radio Club will be hosting a seminar on Smart Phones and Amateur Radio at the Lucas Fire Department, 165 Country Club Rd. in Lucas. The session will start promptly at 1pm.

KE5VBO, Eric and W5ADC, Tony will be covering the best apps to converge amateur radio with the latest smart phone technology. Both Androids and iOS phones will be featured in the presentation. Focus will be on tools to converge amateur radio and emergency communications with your iphone, android or tablet.

If you're a ham and have a smart phone or tablet, this is a seminar you can't miss.

Look forward to seeing you at 1pm on Saturday January 26.

I wouldn't worry about this issue that much if you are running HSMM-MESH. DD-WRT has greatly changed since Linksys released the source code for this router. Much of the system and the services that run on it have been rewritten time and again over the years.

Also, there are a number of exploits available for the default HSMM-MESH firmware load out of the box. There is at least one "semi well known" way to get into a MESH node (last I looked) that comes with the default firmware image. Don't worry about it though, most folks that would do bad things on a MESH node will be stumped by the MESH stuff anyway.

While the original intent was for emergency situations and public
events, an HSMM-MESH network is suitable for permanent installation.
Most anything that can use TCP/IP to/from remote locations can be put onto
a mesh. I have a camera or two on mine as well as temperature sensors.
A digital telephone network w/ PBX can be made as well. Look on the
web for plans using a wifi access point for playing music around a mesh.

Here's a series of article you could take and modify to use on a mesh:

http://mightyohm.com/blog/2008/10/building-a-wifi-radio-part-1-introduction/

You could adapt those for using a mesh and attach a small computer (like
a Raspberry Pi) convert the digital files to music (or even video!) so
you wouldn't be violating Part 97 (but IANAL). Another idear is to do
the USB mod and add an audio USB stick.

This where the fun is really at -- putting applications on the mesh!

What can a mesh be used for? Most anything the Internet is!

The corporate appetite for wireless bandwidth is seemingly insatiable.

Today’s 802.11n Wi-Fi standard, offering 300Mbps to 450Mbps maximum
throughput, has matured and its generous capacity is already being
tested in some organizations and soon will be in others. More users,
more devices per user, BYOD, big apps, and cellular offload are all
fueling the need for faster wireless connections. Consequently, the IEEE
developed a new 1Gbps WLAN standard, called 802.11ac. This
fifth-generation WLAN is now nearing standardization, and products
running at 1Gbps speeds and beyond are emerging to serve enterprise
mission-critical applications. This session will outline key differences
in the 802.11ac and 802.11n standards, explain why Multi-user MIMO
(Multiple Input Multiple Output) is important, and the benefits of
spatial streams.

At this webinar, executives will learn:

Actually, the current models do not have WiFi built in, but there are a few USB WiFi adapters that have been tested to work well. I have a couple of the Raspberry Pis, one running RaspBMC. They are very cool little SBCs (Single Board Computer).

To answer your question, though… The limits of what a Raspberry Pi can be used for on an HSMM-MESH network only exist in the limits of your mind. The RPi is a computer, just like any other, and the HSMM-MESH is a network, just like any other IP network, just with the exception of having some extra portal elements to help people find resources on the network. ANYTHING is possible.

I have a couple of them we use to feed HDTV's for info kiosk displays at FenCon. They seem to work very well.

A friend tells me there's an asterisk distribution for RPi. That and a good sized thumb drive or external HDD would make a nice addition to a MESH network.

I've experimented with the RPi distribution that includes asterisk. It works as well as the full distribution that I ran on my laptop and for a fraction of the cost of the hardware I was using.

Well worth the $35 ! Sad to say that an SD doesn't come with it but
you will need that and a 5v 700mA (recommend a 1A supply or better)
power supply with a micro-USB connector. With a network cable you can
login without futzing with the HDMI and keyboard/mouse.

I have loaded OLSR and ngircd onto mine (got the latter working just
fine) and bought one of those itty bitty USB WiFi dongles. So far it's
been a ton of fun but I haven't gone into ad-hoc mode and added it to
my mesh.... yet! Hopefully soon.

We're still pretty "virgin-ish" with our Mesh network up here (hopefully the warm spring days put people up their towers with new antennas!).

Anyhow, I've taken a USB GPS dongle and Wifi dongle and have been able to run an APRS client and push a feed in to APRS.FI
The cool thing about this, is if you are doing parade control.
A number of Raspi's w/ wifi & GPS's would help in tracking floats (for pacing).

Unrelated, I've built a photo interval controller running an IR led to trigger my camera.

cheers
Steve

Hey John!
Glad to see y'all are ramping up to use HSMM-MESH! I'm not sure what advice I can give you right now. What is this about 'new IP address confusion'?

I have an IP camera hooked up to one of my nodes right now. A regular webcam won't do unless you've got some sort of computer that will make the video viewable. On the other hand, an IP camera has a small, built-in computer that acts like a webserver so that video from the camera can be viewed.

The IP camera should be connected to one of the LAN ports on a mesh node. As far as IP addresses, I'm guessing the confusion is about how to access the camera? The camera can be on the LAN (the 172.27.0.xx addresses) or in the DMZ (yes, De-Militarized Zone) and have a 10.xx.yy.zz address like the WiFi port on a mesh node. In this instance, the camera will not be behind a firewall.

If you'd tell me more about the confusion then I can address that more directly.

2643. ARES group experimenting with HSMM Mesh

Yahoo group: DAWG-HSMM
Date: 2013-03-02 03:41:19 UTC
From: KE5MSE John
Topic: 2643 Message: 2643

I saw the nicely built antenna built by one of the yahoo group members on the http://hsmm-mesh.org website. I am the Emergency Coordinator for the District 14 ARES group in Northeast Harris County and I challenged our talented group with researching and attempting to build a mesh network in our community after hearing about the Plano Hamfest where it was demonstrated. Video links were established at the hamfest and I was excited about getting mesh going here as an alternate communication link to the Internet if "all else fails". Well, the response was great, with five talented guys stepping up, a presentation was given to our group and we all flashed our used routers, built or bought antennas and started to experiment. The many trees and flat terrain here in Harris County (Houston) prohibited any connections so we tried open parking lots and finally had success across a lake and again got interested in continuing experimentation. We were able to connect over a mile across Lake Houston.

Now we are trying to get to the next level and send video. There appear to be several software programs and some new IP address configuration issues our volunteers have struggled with so I thought I would ask for advice. Our final goal would be to establish a more efficient, elevated access point, possible on a fire station that could connect our cell. Still not sure that is possible with all the trees.

Our latest attempts with Focus Video Phone seemed to be a good option as it seemed very simple to configure. As we get more knowledgeable with the mesh, we may find other software that works even better. As you can see we are only several months into this and would appreciate any ideas on video software, IP camera suggestions, and ways to expand our coverage.

>ping .169 across my mesh but cannot ping my camera that I put at .170.

Not quite! There's only one usable address because all 0's and all 1's
are for broadcasts (old & new style), one address will be given to your
camera by DHCP and the remaining address will be the IP address of the
router for sole use by your camera for routing purposes.

While you can turn off DHCP for your DMZ/LAN, it's probably best to
keep it on and setup your camera to be using DHCP to obtain it's IP
address and other goodies.

Also, you should not be needing to add routes to your PC for either of
those addresses. The routes will eventually make it out the router to
which your PC is attached.

>Questions:
>Am I correct that the camera should be located at .170, a static address?

No. Allow your camera to use DHCP to obtain its IP address and other
goodies. When you switch to 1 Host DMZ, the IP address given is for
your router on the LAN port. The address(s) by the attached host(s)
will be in the range (last octet in the IPv4 address) specified in the
DHCP Start and DHCP End windows. For the 1 Host DMZ they will be the
same number. Yes, you will be limited to one host on the node's LAN.

>What is the correct netmask for the camera, 255.0.0.0, 255.255.255.252, or what?

The camera is on its own little network so its netmask would be ...252.
Again, if you let the camera use DHCP this will be taken care of for you.

>Does OLSR advertize routes to the 247.168/30 subnet?

OLSR will advertize a route to the LAN, using the node's LAN address.
On my home mesh, 'route' shows this:

10.173.160.92 ae5ae-base1.aus 255.255.255.252 UG 2 0 0 wl0

The first IP address is that of the LAN port on the node with the camera. ae5ae-base1.aus... is the node's name. When you advertise your camera you can give it a hostname (if the device isn't already choosing a name during the DHCP sign-in negotiations). Oh, the camera's name will show up in the DNS so it should be a piece of cake.

>Why can I ping the interface address but not the camera address?

Without more information about your setup and where your PC is on the mesh relative to the camera, I can't say. I will say that I can ping my camera when it's in the DMZ.

>Thanks for any and all help. I have to get something going before
>the weekend for a very public demo!

You wouldn't happen to have your PC connected into the same node as the camera would you?

Rob, any reason you NEED to use the DMZ? If not, I posted some reasonable instructions in this mailing list in message #2294 and 2295 and they were for putting a camera on the LAN behind the NAT. It also tells how to get the camera advertised on the mesh. It will then be easily accessible via the [Mesh Status] button on any node in the mesh.
You may need to log into Yahoo Groups to acces this URL:

http://tech.groups.yahoo.com/group/DAWG-HSMM/message/2294

Feel free to ask any more questions! If you want to continue with the DMZ effort I can send you screen shots from my browser for setting up my camera.

2650. IRC on WRT54G

Yahoo group: DAWG-HSMM
Date: 2013-03-14 00:34:49 UTC
From: Bill Vodall
Topic: 2650 Message: 2650

The native ngIRCd installed on the WRT54G and is working great...
Now - for a simpler lighter client - are there any recommendations
for a command line client I could run in another WRT54G? I know
there are many clients on the big computers but would get a kick out
of doing it directly on a 4 MB WRT54G system.

Thanks,
Bill - WA7NWP

Bill,
There are a couple of text-based IRC clients in HSMM-Mesh packages
list. Problem is, when they are installed, there are a number of
libraries (specifically a 'curses' library) to load that will overflow a
4/16Meg router or need additional packages that are not in our archives.
If you've got an 8/32 model then try 'em. 'bitchx' and 'weechat' are
two clients in our package list for the WRT54G routers.

If you want a challenge... <evil grin> you could learn the IRC
protocol and then use 'netcat' to talk to an IRC server... Now THAT'S
minimalistic!

Thanks for the info Rusty. My only WRT54G 8/32 models are the -TM
variant and I haven't had time yet to wade through the slightly more
complex update on them. The Bullet is an option and I'll see if
those packages load from the basic OpenWRT setup.

> If you want a challenge... <evil grin> you could learn the IRC

Might be worth doing once... Ah for the good ol days of doing SMTP
email manually by Telnet at 1200 baud..

>
> -Rusty-

Thanks again. I just discovered (IE read the docs) how the Package
management is handled on the WRT54's and it's looks like there's some
functional gems there to be taken advantage of. ngIRCd sure went in
easy..

2653. Where to start

Yahoo group: DAWG-HSMM
Date: 2013-03-14 19:45:38 UTC
From: kf6nfw
Topic: 2653 Message: 2653

I am not new to the radio or the routers and computers, but I am new to this use of HSMM.

Where do I start for making a Mesh system or to make a unit capable of connecting to other Mesh systems?

I have a handful of routers, and am not sure if the one I want to use is even capable of such work.

I could use all the help I can get. Yes I have pilfered through the files and such, and find some of it to be overwhelming, so if someone wants to direct me to good solid reading material I can do that.

I do have the digital handbook for V/UH, and I know there is a huge section dedicated to HSMM, I have read it several times, but am not grasping it fully. I simply would like to go through the process to learn it better.

Thanks in advance for the help.

Mr. Chris Robinson

Welcome to yet another facit of the hobby, Chris!

> Where do I start for making a Mesh system or to make a unit capable
>of connecting to other Mesh systems?

All it takes is a Linksys WRT54G (v1-4), WRT54GL (all versions),
or a WRT54GS (v1-4), download the HSMM-MESH firmware, and have at it.

The first version of the WRT54G was v1.0 yet this is not written on any
of the labels on the underbelly of the unit. It's the only unit that
uses a 5v power supply, as supplied by Linksys, and has about 20 LEDs
on the front, about twice as many as any later model.

All units do have a serial number and the first four characters will
tell you the version number of the router's hardware by using the
table at http://hsmm-mesh.org/images/hsmm_docs/WRT54Shop.pdf

>I have a handful of routers, and am not sure if the one I want to
>use is even capable of such work.

Sorry, most of us don't read minds so... :) you'll hafta verify which of
your units are useable yourself by checking with the document I linked
to above.

>I could use all the help I can get. Yes I have pilfered through the
>files and such, and find some of it to be overwhelming, so if someone
>wants to direct me to good solid reading material I can do that.

What files have you pilfered? Check out
http://hsmm-mesh.org/just-starting-read-this.html first. If you haven't
perused the user documents on hsmm-mesh.org, I'd go and do that. Start
off with some of the user documents section such as (in about this order):

11 What is a mesh node?
8 HSMM-MESH Design Philosophy
9 Firmware Installation Instructions
12 How to use the web interface
7 Using the MESH (aka Examples how to move stuff over the mesh

After or during that checkout the FAQ's at http://hsmm-mesh.org/faq.html
and maybe some of the slides for our presentations at
http://hsmm-mesh.org/hsmm-files.html

> I do have the digital handbook for V/UH, and I know there is a huge
>section dedicated to HSMM, I have read it several times, but am not
>grasping it fully. I simply would like to go through the process to
>learn it better.

We don't have a process per se. The onus to learn this will be pretty much on your shoulders. We're here to help when we can. What is it that you're not grasping? The idea of a mesh? How to use it? Sorry, again we don't read minds so you'll have to give us some ideas of where you're stuck to help us help you.

BTW, another good resource we've found is a book that's available as a free download at http://www.wndw.net (Wireless Networking for the Developing World). It's kinda like the ARRL Handbook but for wireless networking. That should help you with many of the basic and advanced concepts of wireless networking. Note that the last 1/3 of the book is more about the financial ins and outs for delivering a wireless service. Naturally, being hams, we're not concerned about that part.

Lots of reading to do but there's lots of information out there!

Good luck and come back and ask questions!

Rusty is the real guru here but one point I'd like to emphasize is to get TWO of the WRT54G routers and upgrade both of them with the firmware. With two routers you'll see the mesh working and get a feel of what it's all about.

Be careful though - nobody can stop with just two.....

Thank you for the list of routers, that was a big help. I have numerous wrt54 routers, version is unknown though I know one of them is a v6. I am in middle of moving back to the mid-west so this wil lbe a reading project at first and then on to the hands on approach once we are done moving and stuff is out of a storage unit.

Better yet, git a bunch of friends and let them git their own routers
then everybody can start off CHEAP... like good HAMs should. :)

Then, get everybody with their laptops out into a large parking lot --
not near the stores but way, WAY out where nobody but my Dad parks. :)

>Be careful though - nobody can stop with just two.....

Two's company, three's even better company, but at some point you have to
stop buying the clothes and start accessorizing and applicationizing!!! :-)

What we call "lollipops" make for cheap towers that go pret' anywhere.
Think 5-gallon bucket and lid, a 10-ft piece of PVC, sand or concrete
for weight, a few cable ties, maybe some PVC joints and/or joiners,
and you fill in the details for attaching the router to the PVC, running
ethernet cable and power up the PVC, and ballasting the bucket. A big,
plastic kitty litter box will also work, in place of the bucket.

And above all -- LEARN AND HAVE FUN!!! Remember -- this is HAM RADIO!

From: D R Mynatt
Topic: 2653 Message: 2658

Okay; I know I've seen the answer but at an old age, things do tend to slip.
Is the WRT54G router the only router that works in this MESH config?

I did a 'Semi-MESH' network at my last Ham Field day, linking 5 laptops
wireless (over a 50yd distance from each other in a STAR config) to a single
copy of a logging program I the central PC. They shared access to a single
database on the central PC.

Worked fine except for some of the firewalls, and different OSs, plus
Anti-Virus' software defeats took a while to get right.

Simple setup, really, but the firewall and anti-virus work-a-round was a
dog.

2659. Invitation to the second Winlink & HSMM-MESH work session (fwd)

Yahoo group: DAWG-HSMM
Date: 2013-03-19 08:44:04 UTC
From: Rusty Haddock
Topic: 2659 Message: 2659

Folks,

What follows is an invite from the Grayson Co ARES folks to join them for another workshop for HSMM-MESH and Winlink. If you'd like to come up to Van Alstyne, Wade asks that you send your RSVP to him because he will need a head count to secure enough chairs and tables. Please do it ASAP. This will be on the first Tuesday of April, 6:30pm, at the Grayson College South Campus in Van Alstyne.

I would HIGHLY suggest that, if you're bringing equipment, you bring a power strip as well. More than one if you got 'em because these classrooms are not build with a ton of wall outlets.

See you there!

-Rusty-

---------- Forwarded message ----------
From: Wade Graves <wade.graves@...>
Date: Mon, Mar 18, 2013 at 11:31 AM
Subject: Invitation to the second Winlink & HSMM-MESH work session

Greetings ARES members!

It's time for us to meet again and continue (or start) work on our hardware for Winlink and HSMM-MESH! Please BRING YOUR GEAR and tools with you to the meeting. This is a working session with lots of time for experimentation and assistance. You'll get a lot out of it if you bring your materials with you. Make sure you label your equipment with your call sign or name -- this stuff all looks alike!

Meeting information:
Tuesday, April 2, 2013
Grayson College South Campus Room SB 108
1455 West Van Alstyne Parkway
Van Alstyne, TX 75495

Time -- 6:30-9pm.

Google map link:
http://maps.google.com/maps?q=1455+West+Van+Alstyne+Parkway,+Van+Alstyne,+Texas+75495&oe=utf-8&client=firefox-a&gl=us&t=m&vpsrc=0&hnear=1455+W+Van+Alstyne+Pkwy,+Van+Alstyne,+Texas+75495&z=16

Parking -- should be available relatively close to the South Campus building. Enter through the main entrance and turn left down the hallway. SB 108 will be the first room on the left past the restrooms.

RSVP -- Please reply to this message to RSVP. I will need a head count so we can make sure we have enough chairs and tables.

Materials needed -- In addition to your radios, routers, antennas, toolboxes, and other gear, please bring heavy duty extension cords/plug strips/UPS's, too. If you have a mobile HSMM-MESH unit for your vehicle, please plan to turn it on for a while during our work session.

Those who have purchased Raspberry Pi systems -- please bring them, the software, & your monitor/keyboard/mouse/etc. -- the computer lab will NOT be available to us that evening for hardware or software downloads since it is reserved for testing.

Winlink users -- please bring electronic copies of the Winlink/RMS message form -- downloadable from the Downloads section of our website: http://www.tecoares.org/ We will attempt to pass a message form across the HSMM-MESH network to a Winlink station running RMSExpress and then send that file to the EOC.

Looking forward to seeing you there!

73
Wade

Just a reminder for next Tuesday, April 2nd, at the Grayson College South Campus on the outskirts of Van Alstyne (see the Google Map link below). Starting time will be 6:30pm. If you plan on attending *PLEASE* let Wade know as he needs a head count so proper facilities can be appropriated (namely tables and chairs)!

Bring your Winlink and HSMM-MESH gear! Raspberry Pi's too, if you have (at least) one!

2661. Amazing cover letter for job seekers

Yahoo group: DAWG-HSMM
Date: 2013-04-29 06:30:20 UTC
From: debasish
Topic: 2661 Message: 2661

Cover letters are still necessary, and in a competitive market they can give you a serious edge if they are written and presented effectively.
Cover letters are a graceful l way to introduce yourself, to convey your personality and to impress a hiring manager with your experience and your writing skills, said Katy Piotrowski, an author of career books and a career counselor based in Fort Collins, Colo.
You can also tailor them to a specific company in ways that you cannot with a résumé.

There are many candidates having brilliant results but unfortunately they are not getting a single interview call..

Forget about job offers... many people see months fly by without

landing ONE decent job INTERVIEW.

The cover letter carry's an important part in job application.

Most job seekers don't have a clue about getting their "foot in

the door" for a job opening... not a clue.
It's no secret we're living in some of the most stressful and difficult times in years ☐ and today's job market is a killer.
Be A Best Seller - Treat your cover letter like a book jacket for your resume. The potential interviewer will "judge the book by its cover" when it comes to your cover letter and resume so make sure that yours is the best it can be.
Kerry Spivey
I'd like to Introduce Myself If: Cover Letters Today - A cover letter could be your only chance to catch the attention of hiring managers. This article gives you some tips to making a positive first impression with the cover letter.
Cover Letters are King - The Dos and Don'ts - A cover letter is the ticket to having your resume read. Writing a great cover letter has been made simpler with this article covering the does and don'ts of cover letter writing.

2662. DECENT EARNINGS FROM PART TIME JOB

Yahoo group: DAWG-HSMM
Date: 2013-04-29 06:30:33 UTC
From: debasish
Topic: 2662 Message: 2662

Online surveys are easy, simple, interesting and rewarding. You do not need any qualification or technical skills to participate. Anyone with a computer and internet can take these surveys. Just share your opinion about products and services and get paid $2 to $50 per survey depending on the number of questions. These surveys will be sent via email to you by market research companies. After you complete this, you will be paid for your participation.

Who can take online surveys?
you need money to pay off your bills and loans. Taking paid online surveys is a sure-fire way to make handsome income in
Unemployed or employed people with need of extra money:

Either you are employed or unemployed spare time. You can do this work at any time you want and anywhere you want.

Fresh Graduates:

Fresh graduates looking for new job opportunities spend time in attending interviews and most time they are at home preparing resumes and applications. Of course they have spare time and this can be used to take online surveys and make nice income. They will be benefited in both ways; they spend spare time usefully and also can make money.

Moms:

If you are not working woman and feel bored at home you can take online surveys and make some extra money. This will help you to manage your increasing expenses. You do not need to expect your husband for all your expenses. You can make some extra money and spend on your perfumes, creams, cloths, shoes, cosmetics, medicines and bills. You can buy baby products for your babies. You can buy video games or laptop for your baby. Most important thing is that you need not worry for money to spend in beauty parlors.

College students:

College students can take these surveys and make good money to buy books, pay off their car, bike loans and exam fees. If you take online surveys in spare time you can buy your dream bike or car within few months. College students are targeted by many companies for new products such as mobile phones, laptops, iPods, bikes, shoes and many more. This gives them wonderful opportunity to share their opinion and get paid nicely.

Retired people:

Retired persons have much leisure time. Most times they read news papers, watch television or go for a walk in parks. Life becomes very slow for them. If you need something interesting in this old age, you can try paid surveys. You can take many interesting surveys in spare time and make money too. This money would help you buy your medicines or spend on a tour.

By this time you would have decided to take surveys in spare time. Now the question is how to get many surveys?

If you want to get many surveys and make money fast, you should join many survey companies. Joining 20 to 50 companies would help you make very nice income. There are many websites which provide link to 200 to 300 survey companies. You can check the following site which provides link to 300 online survey companies.

Visit the link for more information: http://paydotcom.net/r/97672/debubabu/26796380/ http://tinyurl.com/d2fhxrg

2663. HamCom workshop???

Yahoo group: DAWG-HSMM
Date: 2013-05-13 01:54:58 UTC
From: Rusty Haddock
Topic: 2663 Message: 2663

For those of you on these mailing list that are going to HamCom next month... What would you think about and, more importantly, would you attend a Broadband-Hamnet workshop late Friday afternoon? Wuz thinking nothing scripted with slides per se but more of a place to gather, ask questions, hopefully get answers, maybe show off what you've been doing.

If I get enough "I'll show up" responses I'll see about getting a room reserved and on the schedule. Thinking about the 4-6pm time frame.

Lemme know soon!

Hey, John,

I'd like a couple or three of the batteries if they're still available. I'll be picking up the communications trailer after the WildRide about three tomorrow (Sat.). You can leave them in the comm trailer if that's convenient or I can arrange to pick them up at your convenience.

Thanks,

Bob

Hey Doug,

Just took out some UB 12120FR 12v 12Ah Batteries. How many may I put you down for?

Will bring them this Sat.or will set up a time next week to get them to you.

I would take one. It's hard for me to get around though. If I can have one that'll be awesome. Bob, could you possibly get one and get it to me at a later time?

2673. HSMM-MESH IP Cameras, range and software questions

Yahoo group: DAWG-HSMM
Date: 2013-05-21 01:38:11 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2663 Message: 2673

Hi Folks!
Just curious.anyone have a "favorite" IP camera that they have used on HSMM-MESH?

We have been testing here in Bergen and Passaic Counties, in New Jersey and our "stock" antenna tests have been promising, covering about a quarter mile with stock antennas, but we were wondering what folks found to be the best way to extend the range? Specifically, what antennas and/or bi-directional amplifiers do folks use?

Also, has anyone heard about the new software release that is scheduled for this quarter?

Thanks & 73,

Gordon Beattie, W2TTT

Gordon:

In the files section of the group, you can take a look at the document that I wrote about using the Foscam FI8918W IP camera on HSMM-MESH (you can try the link below, but be forewarned that Yahoo really likes to mangle links !!):

<http://groups.yahoo.com/group/DAWG-HSMM/Adding%20the%20FOSCAM%20FI8918W%20to%20your%20mesh%20network%20-%2020111111.pdf>

I've had good luck putting this camera on our HSMM-MESH during Field Day activities, etc. Let me know if you have any questions on applying this particular IP camera.

Good luck & have fun !!

>is posted, which it is.

FYI, I just pulled down the latest brochure from HamCom.org. With regards
to Broadband-HamNet/HSMM-MESH, my HSMM-MESH Workshop is currently scheduled
for 4-6pm on Friday in Fairview 1 & 2.

My "Applications & Accessories..." talk is currently scheduled for 3pm
on Saturday in the Hillhaven Room. I believe this is the same room
that I tried to do this talk in the dark last year. Glenn Currie's
"HSMM-MESH Update" is scheduled to follow at 4pm in the same room.

Watch for newer editions of the HamCom brochure! Who knows what may
change between now and then.

See you there!

From: Rusty Haddock
Topic: 2679 Message: 2679

Just to let y'all know, I will be holding a Broadband-Hamnet/HSMM-Mesh Workshop on Friday afternoon at HamCom. The time will be 4-6pm in Fairview 1 & 2 according to the latest brochure. Come when you can. Laptops, routers, extension cords, and any mesh-related projects that you're working on will be welcome!

The idea here is we'll try to help you if you're having problems. This will also be a good chance to show off your handiwork. See you there!

2680. New release of ngIRCd package for Broadband-Hamnet

Yahoo group: DAWG-HSMM
Date: 2013-06-08 08:27:17 UTC
From: Rusty Haddock
Topic: 2680 Message: 2680

Folks,
If you have interest in the IRC server that I recompiled for the WRT54G/GL/GS with our Broadband-Hamnet firmware then you should know that I have recently made a new release. The prominent features of this release are:

1) Upgrade of ngircd from version 18 to version 20.2. Not many changes, maybe a few bug fixes. For our needs it should work no different than before. I just thought I'd give y'all an updated version.

2) MUCH EASIER installation! The package is now in our repository so you can use the Administrative page to download the package provided your node has access to an internet gateway.

3) No need to use shell and 'vi' editor to add config tweaks to get running. Yes, you can still edit the config file if you like but it's not necessary to get the ngircd program running on your WRT54G!

As a matter of fact, installation of the ngircd package not only enables the service but starts it running as well! The only thing you need to do afterwards is punch a hole in the firewall and you KNOW that you can do that with our web interface!

4) New version of the installation instructions available on the Broadband-Hamnet website at:

http://hsmm-mesh.org/applications-for-the-mesh/118-internet-relay-chat-irc.html

Enjoy!

2681. Big Bend 50 race use of HSMM-MESH(tm) cover story of July QST (fwd)

Yahoo group: DAWG-HSMM
Date: 2013-06-11 19:15:16 UTC
From: Rusty Haddock
Topic: 2681 Message: 2681

This just in!

----- Forwarded message from Glenn Currie <glenn.kd5mfw@...> -----

The July 2013, QST magazine contains an article on page 68 on the use of HSMM-MESH(TM) / Broadband-Hamnet(TM) in support of the Big Bend 50 Ultramarathon foot race.

Beyond that, it is the cover story of the July QST. Our Austin mesh crew made the cover!

Some of you may have known K8OCL, John Champa, who was the first ARRL HSMM Working Group chairman. He is now a Silent Key.

He had a photo taken of him back in 2003, with a "dream" photo-shop edition of QST in his hands with HSMM on the cover. He worked hard for many years to help hams realize that we have been gifted with some mass produced consumer gear (like the LInksys WRT54G) that allows hams to get into wireless broadband radio at prices of a lifetime!

I am glad to see that we managed to carry on his efforts with HSMM gear and have actually made the cover of QST, 10 years after he held up his "dream" copy of QST.

Your printed copy of the July QST should arrive soon. Please do what you can to help raise interest in HSMM efforts in your area. It would make John happy to know that the word is getting out - cheap ham gear with massive bandwidth capability, so hams can have their own version of a wireless broadband tool.

-Glenn

2683. North Jersey Amateur Radio Operators Prepare for Fireworks Display Support Activity

Yahoo group: DAWG-HSMM
Date: 2013-07-02 04:28:33 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2682 Message: 2683

In preparation for the upcoming fireworks display now, rescheduled for Sunday, July 7th, several Amateur Radio Operators from Bergen and Passaic Counties are combining efforts to put up an Amateur Radio-based HSMM-MESH or "mesh" network across the Fair Lawn, New Jersey Memorial Park site. Their "mesh" network effort will include several IP cameras and Internet Relay Chat capabilities, as well as a link to an off-site Internet gateway, all supported on an independent network.

These "Ham" radio operators will be using conventional two meter FM portables and mobiles in the park to provide entrance point status and safety information to the Fireworks Committee, but they are providing additional functionality this year to help address other issues that have come up in the past.

First, the cameras will provide some sense of what is going on in the crowd from inside the net control and committee management post. We have tested 30 frames per second of VGA quality video to five simultaneous clients of a camera, so it will be interesting to see this once again with other traffic on board. This is a valuable addition to the situational aware package that Radio Amateurs can bring to an event such as this.

Second, there has been a persistent issue with the ability to effectively communicate when there is a high noise level from the music and the exploding fireworks. Text messaging is a good solution, but the cell phones get jammed by the public during the event. The solution is the deployment of several on-site Internet Relay Chat (IRC) servers installed on a small Raspberry Pi controllers along with laptops and netbooks running the IceChat V.7 client around the park. By having several chat servers, we can ensure that if there is an issue, then we can switch to a backup located elsewhere on the mesh. In fact, the IceChat clients allow for simultaneous connections to several servers enabling a rapid switchover.

Finally the Internet gateway will be set up away from the crowd in the core of the park to allow for a more effective "reach" to the local cell site. This gateway will be used to gather local weather information before and during the event as part of our situational awareness package.

It should be an great test of the work that the team has been developing for the last several months, and demonstrate, once again, that Amateur Radio is alive and well and capable of providing effective networks in support of public gatherings and in emergency situations.

Thanks & 73,

Gordon Beattie, W2TTT

Hello to the group,

Just to let you know we our group Open ircDDB (QuadNet IRC Network) for digital Amateur Radio have 4 IRC servers spreaded accross the USA built to handle Dstar traffic. One of the servers is located in Strasburg, PA. The system is Open and if you want to run D-Star radio you are more than welcome. We call it open because we don't required Club Call signs or any registration. As long as you are an Amateur Radio License operation you or grant to have access to the system. Al you have to do is point your gateway to one of the four servers with your issue FCC call sign and work the network. You can take advantage of the very fast routing on the network. Anyway if you want more information you are more than welcome to contact me. 73 and the best of luck with you Hamnet Setup.

2688. Amateur Radio Experimenters Corner - New Yahoo Group☐

Yahoo group: DAWG-HSMM
Date: 2013-07-15 11:34:30 UTC
From: KJ
Topic: 2688 Message: 2688

Amateur Radio Experimenters Corner - New Yahoo Groupâ☐☐
<http://groups.yahoo.com/group/Amateur_Radio_Experimenters_Corner/> The
charter and purpose for this new yahoo group is to further and advance
the exchange of information and cooperation among fellow members so as
to best promote radio related experimentation, knowledge, sharing,
cooperation and individual operating efficiency, which is intended to
result in advancing general levels of interest and the overall welfare
of Amateur Radio throughout the world and our universe at large.
Interestingly and uniquely our group is actively involved with improving
inter-operable communications between the various bands and modes of
operation such as Analog: LSB,USB,SSB,AM,FM-w/n, etc..|Digital: P25,
PSK, FSK, DMR MotoTRBO, NXDN, IRLP, EchoLink, AllStar, Codec-2,
D-STAR® (IRCDDBGateway, HotSpots, Node Adapters, Dplus, DV Dongles,
DVAP's, D-RATS, Digital Networks - ircDDB, G2 and their Reflectors ☐
XRF,DCS,CCS,REF), HSMM-MESH, etc..

```
Keep in mind that we are still busy working at assembling content by
adding useful links, files, photographs, etc... of which over time will
only become more improved and vast for your reference. Importantly it is
also worth noting that we now offer and maintain a geographically vast
and growing redundant fault tolerant network of linked and bridged radio
repeaters consisting of multiple modes of operation access and bands for
radio communication that you will find very convenient and handy when
gaining access via your own radio, thus allowing you to operate in your
own personal favorite mode of operation and at the same time still be
able to seamlessly inter-operate with the many other modes working on
our network.
```

I just went to do it. I ordered 2 and got a $10 discount, with the code.
So I guessed it was only for the first one.

I changed the number ordered to 1. And the discount was $5.00. So it is
accepting that number as a $5 discount.

for that use why do you even need a mesh? just put a decent commercial quality access point on each tower and backhaul both of them to a common point with internet access. you may decide to backhaul over wireless on a different band than the users are on (users on 2.4Ghz & 5.8Ghz backhaul), but that's not exactly difficult. once that's up just point the users at the AP that sits on one or both towers. pretty standard stuff.

Lets try this way: can/do both antennae on a Linksys WRT54G v1-4 transmit/receive on both antennae if set too diversity? Can I attach one high gain antennae to the left side of the Linksys and another high gain to the right side? For example, the left side may point north toward one Mesh node and the right side would point south to another Mesh node.

I realize this may be a very simple question for most, but being the new guy, this is hard to grasp that one antennae can be receiving and the other side transmitting that information basically at the same time. . .

With diversity you can aim the one antenn on way an the other another way and ti woks fine. I woud use directional antennas. Thsi has been shown in QST, and I have done it also.

Jim,
That unit appears to be an 802.11b only unit and would slowdown any
nearby nodes. Oddly, some parts of the website indicates that the unit
is 11g capable. Hard to say. Right now, the only way this unit might
be useful would be as a wireless access to the mesh. A quick look
on openwrt.org shows that Senao units are not supported. Since the
Broadband-Hamnet firmware is based upon OpenWrt it doesn't appear to
would be useful anytime real soon, at least as a mesh node.

2700. HSMM-MESH Workshop Night - Monday, August 12 - Hawthorne Fire Dept.

Yahoo group: DAWG-HSMM
Date: 2013-08-02 14:47:13 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2700 Message: 2700

Hi Folks!

At a recent Passaic County OEM RACES/ARES meeting we presented a talk on HSMM-MESH networking and applications. There was a lot of interest and many expressed a need for a follow-up workshop where individuals could spend time engaged in "hands-on" activity with their own gear, or the gear of others.

We did this in Bergenfield just before the Fair Lawn Fireworks display and it allowed many to become familiar with both the technical aspects of assembling a network and the applications of the network. Some of the application topics include texting, file transfer, video streaming, email, Internet gateway access and environmental sensing.

We will meet starting about 6:00 PM and will stay as late as interest allows, given that many have to go to work the next day!

The address of the Hawthorne Fire HQ is 828 Lafayette Ave., Hawthorne, 07506.. The building is on the corner of Goffle Rd. and Lafayette Avenues.

Please feel free to circulate this to your friends and club members as all are welcome!

Thanks & 73,

Gordon Beattie, W2TTT

2701. Bergenfield Boy Scout Troop 139 Hamfest Reminder - Saturday, August 3

Yahoo group: DAWG-HSMM
Date: 2013-08-02 15:00:54 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2701 Message: 2701

Hi Folks!
Just a quick reminder of the Boy Scout Troop 139/Venture Crew 7373 Hamfest tomorrow, August 3rd in Bergenfield.

The address is 19 North William St. Bergenfield, NJ 07621.

Doors open for vendors at 6:00 AM and for buyers at 8:00 AM.

The facility is indoors and air conditioned.

Tables are $15 with both tables and chairs provided. Some tables are still available

Buyers are $3 per person.

There will be food available to make the fun of seeing old friends that much more enjoyable!

There will also be non-ham vendors and activities focused on the non-ham, so bring your spouse who may not be a ham!

Yours in Scouting!
Thanks & 73,

Gordon Beattie, W2TTT

2702. looking for atheros based high power bridges

Yahoo group: DAWG-HSMM
Date: 2013-08-02 16:19:55 UTC
From: Eric Fort
Topic: 2702 Message: 2702

Does anyone know where one might find some atheros based wifi radios in the 40+dbm output power range for 2.4 or 5.8 ghz? I'm trying to go a little further with decent margin and could use the higher output power. I'd really like to find a way to run 50dbm at the feedpoint if at all possible. Another thing I'm looking at is the ability to run an alternate spreading code (thus not completely 802.11 compatable/interoperable) but I don't know any chipset that allows for that.

Where's dat? In noythen Joyzey?? :)

Please remember that, while we can be a geographically diverse bunch,
this here mailing list is for the Dallas (TX) Area Working Group of HSMM.
Still, ya never know when a Texan might wander up that way and be useful!

Cheers!

The files on barton.de are for PCs and Macs with links for the old Amiga
but not for a WRT54G router.

Please keep in mind that I wrote that instructional before v1.0.0
was released. I'm sorry it's not in the downloadable software list
right now as it's not part of David's build system. I'm trying to get
the guys down in Austin to move the package in with the rest of the
packages. The same binary will run just fine on the v1.0.0 firmware --
I'm running it right now.

Also keep in mind that during installation that there will be a message
about punching a hole in the firewall. Under the new defaults for v1.0.0
(DMZ/Direct mode) this is not necessary for the WiFi interface, just
the WAN if you want to open that up. In any case you still will want
to make the service advertised. On the other hand, if you return the
mode of operations back to NAT mode, port forwarding on port 6667 will
be necessary. Again, I wrote that instructional well before I found
out that 5-host DMZ or Direct mode would be the default.

I can email you the package directly if you'd like.

2711. Version 1.0.0

Yahoo group: DAWG-HSMM
Date: 2013-08-07 15:41:07 UTC
From: albertkarel
Topic: 2711 Message: 2711

As a beginner with 2 newly configured nodes, I wonder:

1. Are nodes configured with older versions of the firmware fully compatible with Version 1.0.0 nodes?

2. I just configured my routers with the prior firmware Version...can I just overwrite with the new version or must the old version be erased first?

2712. Re: [DAWG-HSMM] Version 1.0.0

Yahoo group: DAWG-HSMM
Date: 2013-08-07 17:16:21 UTC
From: Jimmy Dominguez
Topic: 2711 Message: 2712

I am sure others who are much more versed in this will respond, but in the meantime, as I understand it, once you load version 1 to your node the previous version nodes will not be seen by it, and the previous version nodes will not see version 1.

Assuming you have an internet connection to your node, you should be able to upgrade to the version 1.

Again, I am just repeating what I've read over the last week or so.

No. Version 1.0.0 will not mesh with nodes running earlier versions.
This is one of the reasons the SSID was changed to BroadbandHamnet-v1.
The v# at the end will be changed when future firmware becomes
incompatible with previous versions.

>2. I just configured my routers with the prior firmware
>Version...can I just overwrite with the new version or must
>the old version be erased first?

Any new firmware will completely overwrite the previous contents
of the routers flash memory. No erasing on your part is necessary.
Everything is handled for you when using the "Firmware update" section
of the Setup->Administration page.

Mark,
Please give us a little more to go on. If all nodes see each other
then you have a network -- it will build itself. That's one of the
main attributes of a mesh network. What kind of "networking" are you
trying to set up??

Hi Mark,

The underling mesh network only knows how to transfer IP packets from node to node.

I am guessing that your problem is that the windows networking protocol is not getting routed from one mesh node to the other.

In Linux you have to add the Samba packages to allow this functionally.

I am sure that Rusty will have some suggestions for you.

Mark, there are two issues that you need to investigate. First, in order for the machine that is hosting the database for the N3FJP logging program to be accessed from other mesh nodes you'll need to configure either port forwarding using NAT or put the server in a DMZ (configured on the mesh node where the server is connected). Without either of those modes there's no way for devices on the mesh outside of the server's host node to find the server. A second issue is that by default Windows firewall will prevent devices from subnets other than the one where the PC is connected from accessing the server. You'll either need to turn off the firewall on the server (not recommended) or change its configuration to allow off-subnet connections.

If all devices are on the same network (which is the case when PCs are connected to the same switch as the server or if you're using a wireless network with a single subnet) these issues don't appear. In a mesh environment you're dealing with multiple private subnets (one for each node) as well as the 10.x subnet that supports the communication between the nodes so the configuration is a bit more complex than it is in a single-subnet environment. Take a look at the documentation regarding NAT or DMZ config and it may be helpful. Also, the ports that are used by the N3FJP software are documented within the program (I believe) or you may be able to get that info from N3FJP's web site.

There is a great video on youtube that will help.

http://www.youtube.com/watch?v=m_XCA_TEutM worked like a charm for me.

Other reading recommended is:

http://hsmm-mesh.org/fd-logging-with-mesh/131-mesh-networks-are-different-than-wifi-read-how.html

It took me a little time to get my head around it, but Mesh Networks are not like a WiFi network...

Mark, the video that n0trk suggests should work well for you if you are trying to get the logging software running over v0.4.3 of the Broadband-Hamnet firmware. If this is the firmware that you have loaded on your nodes then stick with it and the video will take you THROUGH the steps you'll need to get everything working.

If you are using v1.0.0 (the latest) then alot of that setup goes right out the window because of changes made to the default node configuration and, for the most part, opening up network 'ports' is a thing of the past.

In either case, reserving a DHCP address for the computers connected to each node would be prudent!

Taking the time to learn about TCP/IP will benefit you greatly in working with the mesh for different projects. There are a number of tutorials on the Internet. If you'd like a book then I recommend "TCP/IP for Dummies" if you're a newbie to computer networking. It's a very good book (I hate the title though).

73 and good luck in the contest! :)

Mark, you TRULY NEED to realize something here -- anybody that tries to help you via the mailing list (not just me) is basically "blind" because we can not see what you are doing. All we've heard from you is that "it doesn't work". Well, what have you done? What are you actually doing? And a little more effort in the English Dept. would be helpful too even if English is not your first language.

Did you watch the video?
Did you follow the instructions in the video?
Are you using v0.4.3 of the firmware or v1.0.0?
Are you trying to just get the N3FJP software working or are you trying to do more? If more, what?
What are you doing when you got the network path not found error message? Running N3FJP or accessing shares or what?

Some details would be greatly appreciated!

2724. Re: [DAWG-HSMM] hsmm help

Yahoo group: DAWG-HSMM
Date: 2013-08-20 19:29:23 UTC
From: Lew Paceley
Topic: 2714 Message: 2724

If your equipment is operating properly "network path not found" probably means that Windows doesn't know how to route to the 10.x.y.z network.

Open a Windows Command Prompt window as an administrator (right click) and input:

route -p ADD 10.0.0.0 MASK 255.0.0.0 <your local mesh node LAN IP address>

For example, on my Win7 machine I use this command line: route -p ADD 10.0.0.0 MASK 255.0.0.0 192.168.1.5

Windows should respond with OK!

Close the Command Prompt window and see if that fixes the problem.

The -p switch makes the route persistent. If you change the LAN IP address of your mesh router you'll need to remove the route and add a new one. Google "add a static IP route" and you should find more info.

GL.

PS - If you're trying to route by node name (versus static IP address) then you have to make sure that either the local DNS is caching the mesh node names and addresses or alternatively you can modify your local hosts file on your WIndows machine. Again, Google is your friend here.

Topic: 2714 Message: 2728

Hi Bill,
I have no idea whether additional documentation might be needed. The issue that was being seen was apparently due to the fact that the Windows client didn't know how to route packets to the mesh router on the LAN. These kinds of problems can be challenging to debug because the error messages often don't give any clues as to the real issue.

In fact, there are a number of cases where you may need to explicitly tell the client machine to route packets through a gateway node at a particular address. I'm sure there are many cases I'm missing but the ones that come immediately to mind for our mesh adventures are:

1) You have a mesh router (and it's the only router on the LAN) but it's not providing DHCP gateway address information to the client machine for whatever reason.
Example: You have a Bullet/WRT that is the only router on the LAN but it has DHCP turned off because you are using static addresses. The client machine never receives a gateway address via DHCP and consequently doesn't know where to route the 10.x.y.z mesh packets destined for the mesh wireless network.

2) You have an existing internet router that is providing the DHCP gateway information to the client machine. The gateway address it serves to the client machine provides a gateway address for routing to the internet. However, you want to add a secondary router and route the mesh traffic through the secondary router to the mesh wireless network, not the internet.
Example: You are adding a Bullet/WRT for mesh access that will be connected to your home LAN. Your home LAN already has an existing router for the internet. However, you want 10.x.y.z. packets to use the Bullet/WRT as the gateway and not attempt to send the 10.x.y.z. mesh destination packets to the internet which will fail.

3) You have not configured your primary router to automatically route 10.x.y.z mesh packets to your mesh router. This can be a better alternative to having the LAN clients each having to manually configure a route in their client machines if there are multiple mesh clients on the LAN.
Example: I can set a static route 10.0.0.0 mask 255.0.0.0 through my LAN address 192.168.1.5 Bullet via my Cisco routers "advanced routing" menu. It simply adds the Bullet LAN IP address to its internal routing table as a gateway to the 10.x.y.z network. All 10.x.y.z traffic is then automagically routed through my Bullet without making any changes to the client machine routing.

The simplest single client solution is often to just force the client machine to send 10.x.y.z packets to the LAN-based mesh router directly.

The person having the problem was using a Windows machine so I suggested using the Windows "route" command as a simple fix.

Anyway, this is probably more than anyone was interested in but perhaps it will be useful in the future.

Cheers,
Lew

Hi Guys
My problem is lack of networking knowledge.But I have learned a lot in the past two weeks. After I got the network setup with right settings it started to work. I can see the files that I have shared on the computer on the other node.These folders were setup while networked before using the mesh. But I still can’t add new folders to share while using the mesh network. When I use the add a new network place wizard the the other computer does not show up in the work group. I can only see the computer I am on. I can ping all computers on the mesh network. I got the N3fjp field day software networked and working. So it does work but I think I still have things to work out.

Hi Mark,
Windows assumes workgroup members are all on the same LAN/subnet. Windows Workgroups aren't really intended to stretch across a WAN to different networks which is what you are attempting to do. I'm not sure how you could make it work without playing some tricks with IP addresses to fool the Windows machines on different networks into thinking they are on the same LAN. It would definitely be a limited-use hack.

Another potential solution may be to use the Windows Remote Desktop capability. It is designed to share files across a WAN. There are a number of Remote Desktop Protocol clients available including open-source implementations. The big issue for ham mesh use is that (nearly?) all the RDP implementations use encryption to protect the transfer of client data. It is theoretically possible to take one of the open source RDP clients and surgically remove the encryption but it would be a lot of work.

The mesh network features don't seem to be adding much value based on my limited understanding of your usage model. A single centralized conventional Part 15 WiFi router that all your clients can connect to may be the simplest solution for connecting your computers.

What was the fix? Is there something that needs to be added to the documentation.

Thanks,
Bill, WA7NWP

2732. Non-HSMM router

From: chiefsfan2
Topic: 2732 Message: 2732

I thought I read where you could plug a normal router into a hsmm router then hams with a normal wifi computer could access the network. Is that accurate?

Thanks Dale

Hey Mark,
That's fantastic! Good work. You've done something many folks haven't
even tried. When you get a spare minute please consider writing up your
setup for connecting the Windows machines and posting the writeup on the
hsmm-mesh site.

73,
Lew

In a word, Yes. Plug the WAN (outgoing) port of the "normal" router
into one of the LAN ports of the mesh router. Set the "normal" router
to something like Ch#6 or #11 to avoid interfering with the mesh.

2735. Access Point

Yahoo group: DAWG-HSMM
Date: 2013-09-02 15:51:38 UTC
From: w0uo
Topic: 2735 Message: 2735

DAWG:

In reference to Dale's request for information regarding a non-ham router, is it also possible to connect a non-ham access point to a Broadband Hamnet MESH router via the WAN port? If so, can that access point be operated under part 15 rules? If so, can it be secured via a WEP Key? If required to be operated under Part 97 rules, will the SSID, if set to a call sign, be broadcast at sufficient intervals to satisfy the identification requirements? Are there other issues about how to properly configure the MESH router and the access point? And, finally, what is a crossed RJ45 ethernet cable?

I have an older access point that I would like to employ and, by the way, it appears I can secure it by specifying which MAC addresses will be allowed to connect to it.

Physically, yes.

>If so, can that access point be operated under part 15 rules?

IANAL but IMHO if you are running your mesh per Part 97, I would
say no because, as a ham, you are not supposed to be retransmitting
signals from another radio service (e.g. Part 15), emergency situations
aside. See Part 97.113(e) and/or consult a lawyer with expertise in
communications law and dealing with the FCC.

(for the "acronymally" challenged:
IANAL="I Am Not A Lawyer", IMHO=In My Humble Opinion)

>If so, can it be secured via a WEP Key? If required
>to be operated under Part 97 rules, will the SSID, if set to a
>call sign, be broadcast at sufficient intervals to satisfy the
>identification requirements?

Depends on your equipment but the usual default setting by most AP's has
the SSID broadcasting at intervals of 100-msec. Many AP's can change
that setting or turn off the SSID broadcast though.

>Are there other issues about how to properly configure the
>MESH router and the access point?

Operating under Part 97 -- keep the channel # between 1 and 6, inclusive.

>And, finally, what is a crossed RJ45 ethernet cable?

Think of a crossed or crossover 10BaseT Ethernet cable (RJ45 is a type
of connector) as a null modem for Ethernet. A 10BaseT Ethernet cable
consists of 2 to 4 twisted pairs of wires. Per a number of 10BaseT wiring
standards, Pair 1 and Pair 2 consist of wires going to pins #1 & 2 and
#3 & 6, respectively, and are the pairs that transmit data to and from
a host. 10BaseT Ethernet cables are normally wired such that pins 1,2,3
& 6 at one connector are connected to the same pins on the other end.
Crossover cables connect pins 1,2,3 & 6 to 3,6,1, & 2 at the other end,
respectively.

Modern networking equipment will normally automagically swap signals based
upon the connecting cables. Still, there may be times when you have a

need to directly connect, say, two PC's directly without an intervening
hub or switch. Older NICs (Network Interface Controller) may not
automagically reverse the signals and thus a crossover cable is needed.
Use of a crossover 10BaseT Ethernet cable is a bit of a rarity these days.

>I have an older access point that I would like to employ and, by the way, it
>appears I can secure it by specifying which MAC addresses will be allowed to
>connect to it.

Secure? :) Most any network-aware 12-year can spoof MAC addresses (as well
as set the time on your VCR :) but at least you are making an attempt.

From: kd4wov@...
Topic: 2738 Message: 2738

Hello everyone,
This is kd4wov Tom. I am working with a group of hams in the orlando florida to build a hsmm mesh.

Are you all using the ubiquity bullet or other related products? If so, can they communicate with wrt54g machines running the newest firmware??

We are looking at possibility of some other products beside the linksys.

No, the Broadband-Hamnet group is currently supporting only the WRT54G
(v1-4), GL (all versions), and GS (v1-4) products. Firmware for Atheros
chipset-based routers is being worked on but is not yet available.

You can load an appropriate version of OpenWrt onto a Bullet, load OLSR
and 'dnsmasq', configure them similarly to the BBHN v1.0.0 firmware and
you should get a node that communicates with the v1.0.0 WRT54G's.
Everything would have to be configured by hand but it will work, I've
done it. :)

>If so, can they communicate with wrt54g machines running the newest firmware??
>
> We are looking at possibility of some other products beside the linksys.

Any particular reason why? New WRT54GL's are still readily available
on 'newegg.com' and Amazon (I think).

How about writing up a tutorial for that setup, Rusty.

Bullets nodes are something that has been requested over and over. The endian problem is gone now, right ?

A tutorial might be what it takes to get some development going.

Sure a lot easier to install a Bullet outdoors, and they're very rugged. Small too.

Just a thought.

Hi,
If you're interested in creating Broadband Hamnet compatible Ubiquiti loads you might save some time by downloading the firmware loads from the NW-MESH gang (also Yahoo) and simply reconfiguring them with the Broadband Hamnet parameters via the web interface. NW-MESH has working HSMM-MESH ports for the older Bullet2/Bullet2HP devices as well as the newer M2 series devices. I'd suggest touching bases with Brian, KY9K, to verify he is o.k. with sharing his work beyond the NW-MESH group.

I have been using the NW-MESH firmware in 2 Bullet M2 Titaniums and an older Bullet2 for about 6 months now at my QTH. I've become a big fan of the UBNT routers because of the variety of choices, the higher power output options, and ease of installation.

Rusty et al,

You might also want to turn off DHCP in the access router and ensure that
the "host" mesh node has enough address space defined in its configuration
to accommodate the additional wired and wireless device IPs.

Thanks & 73,

Gordon Beattie, W2TTT

Hi Folks!
I am a bit stuck on a Gateway issue.

I have a mesh node WAN port defined as a Gateway and cabled to a Cradlepoint MBR-1000 router's LAN port. I can connect from the mesh to 192.168.x.y addresses as well as to the Internet. The MBR-1000 has a USB cell data card on AT&T which works great!

Aside from that, there is an issue where I can't access the mesh from the ports or the WiFi of the MBR-1000 even though I have set up a route 10.0.0.0 with a mask of 255.0.0.0 to the address of the MBR-1000's LAN port (192.168.0.199) that connects back to the mesh node's WAN port. To confound things further, I can ping and tracert to the mesh node IP as well as the mesh node's WiFi IP from a user device connected to the MBR-1000.

Traceroutes and http don't go into the mesh from the 192.168.x.y side, so I am wondering what I might be doing wrong. Any thoughts on how I can do this correctly?

Thanks & 73,

Gordon Beattie, W2TTT

'chiefsfan2' wanted to plug in a normal wifi router to a mesh node for
wireless access to the mesh. Unless the wirelessly connecting hosts were
to provide services (instead of acting more like clients, which I suspect)
then there's not much desire for them to act as pseudo-mesh nodes.
I'd say he probably wants to let said wifi router do its normal thing and
provide DHCP and NAT to those additional hosts, as usual, and not worry
about having enough 10.*.*.* addresses available for all attaching hosts.

Clearly not enough information was provided to say definitively one way
or the other.

Technically, you're not doing anything wrong -- a gateway mesh node is supposed to act this way although your expectations may need some adjustment. :) Remember, there is still a firewall for inbound packets from the WAN. It was the intentions of the lead developer of the BBHN firmware to let the mesh freely access the outside world but not vice versa. I've argued,er... DISCUSSED the desire to go the other way with AD5OO to no avail.

You can punch holes in the WAN firewall with the web interface but they can only be directed to the node itself or one of the hosts on its LAN.

If you want to allow unhindered connections from the WAN to mesh nodes then you'll need to find someone that understands 'iptables' and change its configuration and startup scripts.

Rusty,

I see AD5OO's point, however I would think it to be different accessing the mesh WAN port from a local192 address vs. an external, public IP address.

Where does one do the administration for the WAN firewall in the mesh node? That is an intriguing idea and the limitation that it would be for specific hosts on the mesh LAN is a reasonable compromise for now.

Thanks & 73,

The WAN port doesn't know if it's physcially connected to the Internet or
a local net so keep the config simple. If not, you have to manual change
the config depending on what the WAN is connected to. Change your LAN
ports to use 192.168.*.* addresses instead of 172.27.*.* and you get
really messed up, don't ya? :)

>Where does one do the administration for the WAN firewall in the mesh node?
>That is an intriguing idea and the limitation that it would be for specific
>hosts on the mesh LAN is a reasonable compromise for now.

That would be the gateway mesh node's LAN.

The WAN firewall is admin'd in Setup->Port Forwarding, DHCP, Services
page. If you're in Direct mode then the WAN port is the only one
available for port forwarding. If you're in NAT mode then WiFi and WAN
ports are available.

If you want to forward a particular port on the gateway's WAN port to a
particular port of partiicular mesh node you'll have to do that manually
by editting /etc/config.mesh/firewall.user and restart the firewall.
You just have to know what to edit. :)

2750. Plano Balloon Festival (PBF)

Yahoo group: DAWG-HSMM
Date: 2013-09-17 15:51:43 UTC
From: <kip@...>
Topic: 2750 Message: 2750

We are going to try to do the MESH again this year at the Plano Balloon Festival.

I am going simplified this year. The Communications Trailer and the Special Event Trailer both want the MESH.

I will get more nodes reprogrammed to the 1.0 software tonight.

Tomorrow at 6:00 p.m. I will be setting up the node on the roof of the church.
Thursday I will set the node at the two trailers after work if it is not raining too bad.

On the church I plan to use a 24 db antenna with horizontal polarity.
At the Comm Trailer the same thing.
At the Special Event trailer a 15 db Rootenna.

If you can help let me know.

The only problem in the whole mess is that a few minutes ago I was told I may have to go to San Jose, CA Thursday or Monday. Monday is not a problem, but if I have to go in two days there will be problems with getting the MESH going and maintained during the PBF and I will need help.

Kip

Kip, to clarify there will be no HSMM-Mesh at Field Ops?

And also to confirm, you are going to run version 1.0 right?

Field OPS said they did not need the MESH.

Comm Trailer and K5P said they did.

And That is correct, I am going to run 1.0. The new version.

2758. Digital Tuesday again?

Yahoo group: DAWG-HSMM
Date: 2013-09-25 05:45:02 UTC
From: Rusty Haddock
Topic: 2758 Message: 2758

For you folks in the Dallas area:

Kip and I have talked about starting up Digital Tuesday meetings again. Not quite sure where to go that we haven't gone before but for a first meeting it was thought that going over the changes with the v1.0.0 Broadband-Hamnet firmware would be a reasonable start.

We're still working on a place to meet. I wouldn't mind if it moved around, maybe up and down US75 to accommodate more folks, from Richardson and Plano up to Sherman/Denison. The back rooms at Scotty P's in Allen and McKinney shouldn't be bad for general get-togethers (non-formal talks). McKinney Fire House #7, while rather off to the west in McKinney, is spacious, has great facilities for A/V presentations, and Internet access. I just discovered the new McK. Fire House #6 southeast of US75 and Eldorado so I may investigate it since it appears to have a good-sized community room as well. Not sure about Grayson Co. College South Campus in Van Alstyne being available again.

So, yeah there's a bit up in the air right now but I wanted to see if anyone is interested? If so, any thoughts? Since 1st Tuesday would be a bit of a squeeze right now we thought we'd go for 3rd Tuesday in October, the 15th, to start us off.

Let's discuss it here on the list.

-Rusty-

P.S. We have no plans nor are we willing to make any plans with regards to video recording or streaming the meetings as it is far too much of a pain in the tookus to do reasonably well. Besides, the NSA already has all it needs on me. :)

2761. Digital Tuesday rides again -- Tuesday, October 15th

Yahoo group: DAWG-HSMM
Date: 2013-10-10 03:07:59 UTC
From: Rusty Haddock
Topic: 2761 Message: 2761

OK, I struck out with the McKinney firehouses. Apparently, only FH #5 and #7 have rooms that are now reservable by the public and both were taken for the upcoming Tuesday night. I was able to reserve the backroom at Scotty P's Hamburgers in McKinney. We have the room for 7-8:30pm (closing time) next Tuesday, October 15th. The address is 2950 Craig Drive, McKinney, in the NW corner of Eldorado Pkwy and US-75. You may have to wander and wind around the construction in the area a bit but it's not too hard.

Come early to eat your meal, if you want, so we can get started as soon as we can since the restaurant closes at 8:30pm. I'll try to bring a power strip or two for laptops and nodes, if you want to bring yours.

I am NOT planning an A/V-style presentation so it will be more of a talk and discussion, maybe with a handout. Initially, I'd like to go over the changes in the v1.0.0 firmware and how to proceed with our resurrection. With time permitting, possibly go over our success with 3.3-GHz gear at the Plano Balloon Fest, and some discussion about experimentation we can do, individually and as a group, before the weather turns too cold.

Do give some serious thought to and be on the look out for locations on which to do range testing. Large parks or other recreation areas would be great for starters but I'd like to know about any places for long distance testing, say on the order of 1-5 miles.

See you next Tuesday night!

See you all on Tuesday. I will have a node in the Jeep running, let me know if I need to bring another. Beyond that I have an IP phone now running with raspbx. Do we want to play with any extra peripherals like that or stick to the show and tell on the new firmware? On that note I can bring the set of 3 Ghz radios I was able to procure if anyone wants to mess with them.

OK, here's a reminder --
Tuesday, October 15th
Scotty P's Hamburger in McKinney.
2950 Craig Drive, McKinney,

Scotty P's is located in the NW corner of Eldorado Pkwy and US-75.
You may have to wander and wind around the construction in the area a
bit but it's not too hard. Alright, the lat/lon is 33.174178, -96.643880
from Google Maps. We'll be in the back room.

Since Scotty P's closes at 8:30pm, should we want to continue further,
maybe showing off our projects and whatnot, we can move to DQ or similar
location.

Anyhoot, like Ian I will bring my Raspberry Pi as well which is also
acting as a standalone mesh node.

See you there?

2766. Our next Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2013-11-14 03:09:13 UTC
From: Rusty Haddock
Topic: 2766 Message: 2766

Our next meeting for Digital Tuesday will be next Tuesday, Nov. 19th. New time -- 6pm -- at Southern Recipes Cafe, 1381 West Campbell Rd, Richardson. This restaurant is west of US75 on Campbell, just east of Coit Rd, on the south side of Campbell across from La Madeleine restaurant on the north side. Doug was able to reserve us a table for 10 in the back room.

Remember -- new time -- 6pm.

There's no presentation planned so it'll be pretty much like our last meeting at Scotty P's -- just whatever comes up for discussion. So, bring yer questions or new toys or both!!!

See ya there.

A friend of mine lives in the Highland Springs Retirement Community in North Dallas. They are organizing an all day bus excursion to the NASA High Altitude Balloon Facility in Palestine, TX. See: http://en.wikipedia.org/wiki/Columbia_Scientific_Balloon_Facility

I'm going. They are trying to fill the bus. There is one more seat available. The cost is $35 lunch included.

Date: Monday, Nov. 18.
Departure time: 7:15am
Location: Highland Springs, 8000 Frankford Road, Dallas, TX 75252

If you are interested in making the trip, call me ASAP at 214-770-2394.

Paul, Try the map on http://hsmm-mesh.org/googlemapped-mesh-nodes.html
These are just folks with registered nodes so I'm aware if they are
knowledgable or even close to you. Maybe they know of others that
are toying with Broadband-Hamnet that can help you but that are not on
the map.

Also, the list of elmers doesn't have anybody for Michigan or most
surrounding states.

>without contacts... any training material suggestions??

I would go through the documents and other files on tap at hsmm-mesh.org.
There's also the ebook, "Wireless Networking in the Developing World",
available at wndw.net. Lots of good technical information there,
especially in the third/latest edition but not much on "training".
Some of the group's slide presentations are available are up there
as well. Kinda depends on what you want to "train" about?

As always, you're certainly welcome to ask question here or on the
forums at hsmm-mesh.org.

Best of luck!

From: Kipton Moravec
Topic: 2773 Message: 2773

I have been asked to give a presentation on our MESH activities at the Cowtown Hamfest on January 18.

The Lockeed Recreational Center where it is located will be sold to a developer so they will not be at that location after 2014. No telling what will happen next year.

The sponsoring club has changed their name to Cowtown Ham Radio Club. Same people, new name.

Kip

2774. Re: [DAWG-HSMM] Our next Digital Tuesday

Yahoo group: DAWG-HSMM

From: Rusty Haddock
Topic: 2766 Message: 2774

Just a reminder...

Our next meeting for Digital Tuesday will be next Tuesday, Nov. 19th. New time -- 6pm -- at Southern Recipes Cafe, 1381 West Campbell Rd, Richardson. This restaurant is west of US75 on Campbell, just east of Coit Rd, on the south side of Campbell across from La Madeleine restaurant on the north side. Doug was able to reserve us a table for 10 in the back room.

Remember -- new time -- 6pm.

There's no presentation planned so it'll be pretty much like our last meeting at Scotty P's -- just whatever comes up for discussion. So, bring yer questions or new toys or both!!!

See ya there.

2776. New node soon to be up in Bedford, Texas

Yahoo group: DAWG-HSMM
Date: 2013-11-25 02:13:50 UTC
From: <kenthasi@...>
Topic: 2776 Message: 2776

The Bedford ARC has been using BBHN (HSMM MESH) for quite some time for different purposes. Last year it was used to link several computers to a central server for logging during Field Day. I was hoping that there would be a node listed on the BBHN webpage by now, but, it looks like that was not in the cards. So, I had to take matters into my own hands. The various pieces of equipment are beggining to arrive to put up my node in Bedford. It won't be that high, about 30 feet, but I am hopeful that it will only be the beggining. My plan is to use an 8 db omni antenna I already have, mounted on top of my chimney. I have two Linksys routers loaded with BBHN 1.0.0. I plan on using the second unit for testing around the area, as well as portable use eventually. Long term I want to get a few more nodes for portable use. I am hoping to eventually get enough people interested and putting up nodes so that it will hopefully allow for a VOIP network, and possibly a ROIP network. A little ambitious I know, but there have already been a couple of people approach me about helping them get set up. Both of them have towers and want to mount BBHN antennas at 75-80 foot high. So, look for the node on the air soon.

2777. RE: [DAWG-HSMM] Chat server

Yahoo group: DAWG-HSMM

From: <michellezenner@...>
Topic: 2704 Message: 2777

I did not see the instructions attached to the yahoo group as stated earlier, but I did read the instructions at HSMM online.

I'm using BBHNv1 firmware w/ LAN 5 and still have to forward ports 6667 to get the IRC chat to work.

Chatzilla needs the port number also to send files.

The name of the localnode:6667 works on the *ngircd loaded side* of the node, but a secondary node needs the direct *nodename-X:6667* and then #mesh room in order to be in the same chat room. STILL file transfers from the secondary node will oftentimes go to the $Server room in ngircd (which no one in chat is physically visiting but we are all using it....) instead of the #mesh room.

How to edit ngircd on the node? Thanks.

Shouldn't need to UNLESS you want to access the IRC server via the
WAN port. With Direct 5 mode, that's the only interface you can forward
ports from.

>...
>How to edit ngircd on the node? Thanks.

The config file is /etc/ngircd.conf and it can be editted with 'vi'.

Folks,

Using a room at Grayson County College in Van Alstyne is out.
One, the Grayson Co. folk have been busy with other things and two,
the college wasn't available due to finishing up construction. We may
get a shot in February or March depending on how schedules match up.

So, what do we wanna do?

Have a play date and bring our cameras and SIP phones and whatnot?
(If so I'll try to get the community room at the VAFD.)

Just have a meet at a McKinney burger joint? The Brahm's in VA
is nice too. (I'm not sure our past numbers really necessitate
a reservation)

Blow it off until January?

Lemme know ASAP!

Uh... Brahms in VA --> Van Alstyne. :)

>Three responses three different answers. Someone else be a deciding vote.

Given the lack of responses we'll blow off this month -- I guess most
everybody's too busy this time of year. We'll see what we can do for
January. I'd really like to have a "play date" soon where we can get
our phones and video and Raspberry Pi's and whatever and mesh out.

Hope y'all enjoy your holidays! See ya next year.

2787. Ethernet Passive PoE power injectors

Yahoo group: DAWG-HSMM
Date: 2013-12-20 06:02:50 UTC
From: Rusty Haddock
Topic: 2787 Message: 2787

Hey folks!

I know that many of you are not local to Dallas but does anyone know of a brick and mortar/big box (or little box) store in the area that carries the RJ45 passive power injectors? I know I can get them on eBay (http://tinyurl.com/o6lhs9f) but I'd like to get them sooner than next year. :) Suggestions for better units would be appreciated as well. Both sets of mine have broken one or more of their little, itty bitty, Chinese-made, 50-gauge wires (yes, I'm being facetious).

Thanks!

Rusty:

This isn't exactly the brick & mortar store that you were looking for, but I've previously ordered passive POE adapters through http://www.amazon.com/ & despite the low cost, they are very good quality units. Here's what I bought for use in our Lockheed Radio Club mesh nodes (WARNING: these DO NOT have the correct DC connector . . . we cut the provided DC connectors off & replaced them with Anderson Power Poles, so the size of the provided DC connector was moot for us !!):

http://www.amazon.com/AIR802-POEPASS-02-Injector-Splitter-Connector/dp/B003QRQ5DK/ref=pd_bxgy_pc_text_y

I believe that the following product uses the CORRECT DC connector, but you should definitely verify this for yourself:

http://www.amazon.com/AIR802-POEPASS-01-Injector-Splitter-Connector/dp/B003DLJNWE/ref=pd_bxgy_e_text_y

Good luck & have fun !!

Hey folks!

I know that many of you are not local to Dallas but does anyone know of a brick and mortar/big box (or little box) store in the area that carries the RJ45 passive power injectors? I know I can get them on eBay (http://tinyurl.com/o6lhs9f) but I'd like to get them sooner than next year. :) Suggestions for better units would be appreciated as well. Both sets of mine have broken one or more of their little, itty bitty, Chinese-made, 50-gauge wires (yes, I'm being facetious).

Thanks!

Rusty:

This isn't exactly the brick & mortar store that you were looking for, but I've previously ordered passive POE adapters through http://www.amazon.com/ & despite the low cost, they are very good quality units. Here's what I bought for use in our Lockheed Radio Club mesh nodes (WARNING: these DO NOT have the correct DC connector . . . we cut the provided DC connectors off & replaced them with Anderson Power Poles, so the size of the provided DC connector was moot for us !!):

http://www.amazon.com/AIR802-POEPASS-02-Injector-Splitter-Connector/dp/B003QRQ5DK/ref=pd_bxgy_pc_text_y

I believe that the following product uses the CORRECT DC connector, but you should definitely verify this for yourself:

http://www.amazon.com/AIR802-POEPASS-01-Injector-Splitter-Connector/dp/B003DLJNWE/ref=pd_bxgy_e_text_y

Good luck & have fun !!

2792. Farmersville node site

Yahoo group: DAWG-HSMM
Date: 2013-12-20 12:21:44 UTC
From: <kenthasi@...>
Topic: 2792 Message: 2792

The owner of a tower that is three miles south of Farmersville, has granted permission to put a node up. The tower has a 900mhz repeater on it currently. He has granted full access to mount the equipment at any level. The tower is 186 feet tall. If you have a node available and want to explore using the site, let me know. I also have a site available at 70 feet in Howe.

2793. Re: [DAWG-HSMM] Farmersville node site

That new 900MHz repeater is supposed to cover into DFW quite well, but I haven't tested it myself. It'd be cool to have a node there also.

2795. RE: Ethernet Passive PoE power injectors

Yahoo group: DAWG-HSMM
Date: 2013-12-20 15:12:05 UTC
From: <kenthasi@...>
Topic: 2787 Message: 2795

Tigerdirect over in Grapevine /Colleyville has them. If they don't have what you want, you can have the store get it sent to them with no freight. Tanners Electronics in Carrollton may have them.

2796. Re: [DAWG-HSMM] Farmersville node site

Yahoo group: DAWG-HSMM

Topic: 2792 Message: 2796

I found out this morning that a node site is available at the 175' level of a tower non Pottsboro.

2797. CAUTION when buying eBay routers

Yahoo group: DAWG-HSMM
Date: 2013-12-22 15:43:59 UTC
From: <kenthasi@...>
Topic: 2797 Message: 2797

I purchased two routers off of eBay from a seller under the username katebf12. The firmware the units have been flashed with is corrupt, and even using the tftp method, I have not been able to revive them. On top of that, it took several weeks to get the routers because she said her son, who flashes the routers, has been out of town. At first I couldn't even get a response from the seller. Only after an eBay complaint to they respond. I have not had time to mess with these two nodes, and left them sitting in the box until I was off for vacation. Also, one wall wart was dead. DO NOT USE THIS VENDOR!

2798. Re: CAUTION when buying eBay routers

2799. RE: CAUTION when buying eBay routers

Yahoo group: DAWG-HSMM
Date: 2013-12-23 12:35:15 UTC
From: <kenthasi@...>
Topic: 2797 Message: 2799

I had posted negative when I had trouble getting the routers in the first place. The lady wrote back, was very apologetic and said she would send them immediately. Two weeks after they were supposed to be sent. I told her that I would revise my feedback because it did sound like an oversight. I haven't had time to mess with these nodes for the until this week, which is when I found the problem. I contacted the vendor yesterday, and she said she not going to sell any more of the nodes, and is closing the username. Sounded a little over the top for a response. I bet they pop up under a different name. I noticed this was a fairly new store. Probably why.

2800. Quickie tftp server on a mesh node

Yahoo group: DAWG-HSMM
Date: 2014-01-02 09:40:37 UTC
From: Rusty Haddock
Topic: 2800 Message: 2800

Maybe I discovered this a few years ago but I don't remember doing it. I know I've talked about a couple of the TFTP servers we have on BBHN software repository but I just don't remember mentioning this one.

[WARNING: If you're not comfortable with the Linux command line, or shell, then you might wanna just skip this message. :-)]

So let's say you need a quickie TFTP server on one of your mesh nodes to serve up some configuration/firmware files for your SIP/VoIP phones, or forms for your 'troups' to download, for instance. These sorta files don't change much so they're pretty much read-only. Well, there's no need to be going to the firmware download webpage and trying to figure out which tftp server you want to try when there's one built into the node. That program is called 'dnsmasq' and actually does a number of things on your node such as act as a DNS and DHCP server for your LAN so it's already multi-talented.

Get to the command line or shell of your mesh node and edit the file /etc/dnsmasq.conf. Go to the bottom of the file, add these lines:

```
enable-tftp
tftp-root=/tmp
```

save and exit your editor. This enables 'dnsmasq' to act as a read-only TFTP server. If you have a similar server program already running then you'll need to stop it before starting this one.

Now just restart the 'dnsmasq' program with

```
/etc/init.d/dnsmasq restart
```

You might not want to use /tmp since a power cycle, intended or not, will cause the contents of /tmp to disappear like the dodo.

How you get your files to the 'tftp-root' directory on your node I'll leave as an exercise for the reader. :->

One thing I have noticed is that the server is a little funny about the 'mode' of the files being downloaded. If you use 'binary' or 'image' mode you should be fine when transferring files with a client. Using 'text' or 'ascii' mode gave me errors messages when I tried to download a file. Cooperation with VoIP phones and other equipment try to download files may vary -- I haven't tried them yet. Test before putting into "production".

I just found this late at night so how it works for you could be, well... "not so good" but it worked fine for me! :)

Try it out and report back! It's late... Bye!

-Rusty-

P.S. If you no longer want this TFTP server then just remove ONLY the two lines from /etc/dnsmasq.conf you added and restart the 'dnsmasq' program as you did above.

>
> Dear Rusty,

For "execiutables", you do NOT want ASCII mode as that mode does not
pass "binary" data, which executables contain. Only use ASCII mode for
"text" files... ASCII mode intends to ensure that the "new line" conventions
of the requester are honored.
UNIX - 0x0a NL (newline)
DOS - 0x0d0a CR LF (carriage return linefeed)
Mac - 0x0d CR (carriage return)

Note that LF and NL are the same character encoding (0x0a) where LF
means vertical slew (line feed) which is NOT a line terminator, where NL
means NewLine, which is the UNIX line terminator... why have two characters
when one will do.

Mac... Well... Same one instead of two... but...
"Think Different." (their motto - translation: "be odd").

Using "text" or ASCII mode, the source file is mangled for the end of line
conventions so that when it gets to the requestor's machine, the end-of-line
convention matches that of the requestor. Clearly if your executable has
0x0a or 0x0d embedded.. (e.g. machine instructions)... "funny" things will
be occurring.

Hope that helps explain the "mystery".

73

>Hope that helps explain the "mystery".

Nope. Nice effort but it sure doesn't help at all. I'm well aware of
the differences between transferring 'text' and 'binary' files. I've had
to explain the concept more than just a few times over my numerous years.

As I wrote in my earlier message, using 'ascii' mode gave me an error
message when I tried to download a file. Getting the wrong mode when
transferring files should **NEVER** give you an error message --
just possibly bad data on the receiving end with a mode mismatch.

The error messages seem to be a problem in the server. Maybe it's
inconsequential since most files coming off a TFTP (not FTP) server are
for booting and configuration data so they're gonna be binaries and not
needing translation. Still, I was wondering if others who have tried
using DNSmasq for a TFTP server had seen the same silliness.

Thanks for partipating anyhow! :)

2803. IP Camera

Yahoo group: DAWG-HSMM
Date: 2014-01-06 01:38:11 UTC
From: Kipton Moravec
Topic: 2803 Message: 2803

Does anyone know of IP camera that you would recommend for launching on a balloon. We want to try to stream from the balloon to the ground using a mesh node.

Kip

Kip:

Back in the HSMM days, I used a Foscam FI8918W IP camera very successfully on the mesh network (we did not use the wireless capability of the camera . . . we used it CAT5 connected) . . . we even tried to fly it on one of our NTBP launches, but we quickly lost the mesh link (not enough antenna !!). That's been quite a while back & I haven't had time to try it yet on the BBHN 1.0 setup. This particular camera is a little on the expensive side, but it works well.

There's a PDF in the files section titled "Adding the FOSCAM FI8918W to your mesh network - 20111111.pdf" which fully describes the previous method that I used to set it all up . . . hope that helps !!

I have a dLink DCS-900 that you can use. It's old and requires 5
volts. Not much of a camera.

http://support.dlink.com/ProductInfo.aspx?m=DCS-900

It hasn't been used for years. If you are interested, I'll check it out.

Doug,

We are interested it the camera. We are looking at a flight on Feb 1 to just try and see if we can establish and maintain a connection with balloon. We would be looking at a short flight to about 50k ft and then a recovery. If anyone is interested in participating in the launch, tracking and recovery, all are welcome.

Thanks,

Tony

2808. HSMM-MESH high altitude balloon experiment.

Yahoo group: DAWG-HSMM
Date: 2014-01-07 01:42:51 UTC
From: Kipton Moravec
Topic: 2808 Message: 2808

The proposal on the table at this time is to launch PHAB-6 on Feb 1 with an HSMM payload. This would be a short flight to see if we can maintain a 2.4 GHz link during the flight. We would likely fly a webcam on this flight and attempt to get live video.

Is anyone in this group interested in bringing your MESH node and help track the balloon and receive the video signal? This is a mobile operation, and the balloon will have an APRS tracker on it also so we can track it and find it when it lands.

The flight will probably be <40 miles depending on the wind. We will intentionally try to make it go up quickly so it will not travel as far for this test.

Kip

What type of ground station do you envision?

If we have a APRS transmitting position and altitude, that should be enough to calculate azimuth and elevation of a directional antenna. Is there a program that will calculate that?

And of course we should have additional stations down range.

If this is an IP camera, what do you use to capture video for viewing after the event?

Doug (KD5OUG):

To view the streaming video, you could use a free package called VLC . . . among many other capabilities, it allows you to view & record at the same time. See the PDF document in the files section titled "Adding the FOSCAM FI8918W to your mesh network - 20111111.pdf" which fully describes the previous method that I used to set up my IP camera on the mesh . . . hope that helps !!

Kent,
I have several nodes that use them and they make a measurable difference in SNR. When using them, I have found it ok to leave one port off or on. I turn them off when local traffic to the node is not expected or desired and I am using a BDA and a directional antenna on one port.
I also seem to find them with 6VDC power requirements. I have taken a 4.2 A USB supply and fed its 5VDC into it just fine. Our goal is to have every node portable, permanent or home be 12VDC with some battery backup.

The flight will be equipped with an APRS beacon to provide location and altitude. We were thinking that we might try and have one fixed ground station near the launch site, one near the projected landing site and a few mobile stations. We will plan on this flight being a short distance. If this works, we might try a higher altitude flight later in the year.

Thanks,

Tony

Why not use a Raspberry Pi with the Pi Camera? The camera itself won't add too much weight to your payload and you could use the pi for other things too probably. Not to mention it would be possible to have it save copies of the pictures locally on its sd card along with sending via wifi. The whole thing would probably cost you about what a typical IP camera would too.
http://www.alliedelec.com/lp/130513rasocameramodule/
They used to have a bundle of both for $40 or so but that must have been a limited time thing last year.

Tony,

My only question would be whether the Pi camera will operate at 50K ft in a harsh temperature environment? I think it is a GREAT IDEA to capture the video on an SD card for later review. You might want to "dry run" the camera platform on a tethered balloon to about 200 ft or so. This will give you an idea whether it is mechanically stable and a start on the WiFi coverage. I'm not certain what the FAA rules are for a tethered balloon, but if you could go 500 or more feet, that would be a great test.

Thanks & 73,

Gordon Beattie, W2TTT

Check the main Raspberry Pi website/blob. I believe that they've launched
several balloons from [jolly old] England into mainland Europe using
a RPi and the associated camera. Still, dunno why it wouldn't work
since it's completely "solid state" -- no video tubes to worry about.
Just keep it reasonably warm, like any other semiconductor-base equipment
and batteries, and it should operate just peachy.

I am not too worried about temperature control. We always put the electronics in insulated boxes and due to the heat generated by the electronics, the temperatures very seldom drop below normal industrial temperature ranges for electronics.

Somebody is doing it - http://hsmmpi.wordpress.com/

Not about about the v1.1..

I have a hunch that this will kill throughput - far better to keep the mesh nodes up in the clean and access them with specialized equipment on managed links - preferably on a different (5 GHz, 3 GHz) band.

Jim,

I am using it on and off, but it is based on the older code. It does work once you change the SSID to match what is used in the V1.0 Linksys code. Sometime this weekend we will also check it out with the Ubiquity code.

Thanks & 73,

2829. Digital Tuesday

Yahoo group: DAWG-HSMM
Date: 2014-01-17 09:34:47 UTC
From: Rusty Haddock
Topic: 2037 Message: 2829

Anyone interested? I'm thinking somewhere in McKinney this month, maybe Scott P's again although I'm open to most any place that's reasonably quiet.

There's an interesting program out there for the Raspberry Pi called 'PiFM' which will broadcast an FM signal on a carrier from 1-250 MHz. It's intended as a very low-power xmitter for the FM Broadcast band with no extra equipment other than a wire tied to one of the GPIO pins. Have it speak a callsign from time to time and it may work on the 10m, 6m, 2m, and 220-MHz bands. During my initial play, er... tinkering the audio played fairly well. Range is kind of limited but a longer wire may help. I can bring my RPi if anyone is interested.

If anyone has some mesh problems then we can hash them out.

Your thoughts???

Rusty
I'm interested. Some of us at the Hurst club are setting up a mesh network around this area in Mid Cities, grapevine, colleyville, HEB areas.
I'm interested in learning more about the mesh as a whole, I've not tried anything with the RPi but I know some others who have.
What're you wanting broadcast on those bands from the RPi?
You can contact me offline if you wish kc5hwb@grapevinehamradio.com

Jimmy,
Kip and I are trying to get it started again but once a month on
3rd Tuesday. We didn't do December due to the proximity to Christmas.

For those that wish to meet, let's gather at Scotty P's in McKinney at 7pm Tuesday night. Look around, I'll shoot for getting a table in the back room like last time.

Scotty P's Hamburgers
2950 Craig Drive
McKinney , Texas 75070

It would help to get there early as possible since the restaurant closes at 8:30pm which gives us about 90-minutes.

See you there!

2834. Bedford Node goes up tonight

Yahoo group: DAWG-HSMM
Date: 2014-01-21 19:52:06 UTC
From: <kenthasi@...>
Topic: 2834 Message: 2834

Here is another bright spot for the group. My Bedford node will be officially turned on tonight. It will have a 15db onmi at 32' up and a 23 db grid, horizontally polarized, pointed to the southwest towards Hurst and Fort Worth. The mid cities should have 3-4 nodes going up in the next few weeks. Hope we keep the MESH expansion going!

2835. Farmersville Node

Yahoo group: DAWG-HSMM
Date: 2014-01-21 19:56:47 UTC
From: <kenthasi@...>
Topic: 2835 Message: 2835

The node for slated for 3 miles south of Farmersville on 78 is coming together. The equipment is standing by for the official release of the BBHN Firmware. It will be a Ubiquiti Rocket M2 GPS with an AMO-2G13 omni. The Cat6 shielded/armored cable is already to the top of the 186ft tower and inside of conduit to boot. Drain wire is there also. Once the flash is complete, a couple of days of testing, and then then tower climber will do his thing. It hould serve the BBHN MESH community well out that way.

I will keep the group posted on the progress.

2839. Getting ready for a node roll out

Yahoo group: DAWG-HSMM
Date: 2014-02-01 06:17:04 UTC
From: <kenthasi@...>
Topic: 2839 Message: 2839

Well, the Ubiquiti M2HP firmware was released tonight. I loaded the firmware on four nodes and got them configured with my call sign information. One of our other group members loaded 10 Linksys routers with BBHN firmware, as well. I hoping to get the Nanostation and Rocket loaded next week for Farmersville and Pottsboro. I am meeting with another group next Thursday that has quite a few Linksys routers as well. At last count, there were at no less than 30 nodes being loaded with firmware over the next 10 days. It will be quite a while before they are all deployed around the DFW area, but I am excited to see some progress. Our group will probably finish loading firmware on another 6 Ubiquiti nodes tomorrow.

2840. Orlando Hamcation 2015 Regional / National Event planned

Yahoo group: DAWG-HSMM
Date: 2014-02-10 16:22:41 UTC
From: <kd4wov@...>
Topic: 2840 Message: 2840

Hello everyone,
I know you looked at the subject line and thought what in the world, well let me explain. Central Florida hsmm group and several in the Palm beach county HSMM group are wanting to get some people from your group who maybe comming to Orlando next year to either speak at a forum or give us a over view of what has worked for your group. Our goal is to bring as many hsmm groups together as possible to exchange ideas and info about succes and failure. This exchange of info i believe will benifit HSMM in general.
This has been started because i found verly little info when i started 7 or 8 months ago on how to get started and what to do with hsmm.. I want to encourage groups like yours, help promote hsmm, and to provide places that hands on experimentation can be done. I have several things this year we plan locally to have some workshops. But our aim is to have a forum or symposium with as many HSMM groups that we can, and even promote bring your node and lets build a HSMM net during hamcation that will be a test bed for what happens when you have a large number of nodes on the air (will the network handle 200 nodes? what isues arise (aside from RF issues)? Plus it will be a great place to demistate HSMM to an audiance from all over the world (they come to Orlando for the nice warm winters we have and to visit Disney World).
We are starting to plan now, because we would like as much input and participation as we can muster. I realize you are not local but you can have a part in this, if you are willing to lend a hand. One goal that i want to try is to tunnel to groups like yours and see if we can do video feeds thru the HSMM net acrross the county thru tunneling (yes i know it is not ham radio at that point, but it will prove the connect ablility). If all goes according to plans even have a few participate in the forum via skype or google hangouts. As i get feedback and interest i will report back from time to time to update you all on the status.

you can email us to let me know your are interested
me Tom KD4WOV at kd4wov@earthlink.net or look for me on Google hangouts

2844. RE: Farmersville Node

Yahoo group: DAWG-HSMM
Date: 2014-02-16 15:03:21 UTC
From: <kenthasi@...>
Topic: 2835 Message: 2844

Here is an update on the Farmersville node. The Ubiquiti Rocket has been flashed and testing went outstanding. The performance differences between a Linksys unit and the Rocket were astounding to say the least. The control node is a Ubiquiti Bullet M2HP by the way. The Rocket actually ended up being quite the project. The unit was taken down from a commercial WISP application that was functioning on the same tower that it will be redeployed on as a BBHN node. Unfortunately, when it was taken down, the ethernet cable was cut. It has been decided to replace the entire run of ethernet all the way down to the "shack". It will probably be a few weeks before this happens. There are two other projects that need to be completed on the tower as well, including new heliax for a repeater that is already up. All of the projects will be done at the same time to save the frustrations associated with tower climbing. There is also a 5.8GHz node to go on the tower, when the firmware is completed for BBHN. Sorry for the delays, but everyone involved in this deployment wants to make sure it is done right.

I like Scotty P's except that they do not stay open very late. And they do not have an outlet in the room. :) So we need to start earlier. I can make 6:30 p.m. but probably not 6:00 p.m.

What about Spring Creek BBQ in McKinney? They are open later and the room has an outlet or 2.

I am interested in seeing your progress moving the SW menu's to Raspberry Pi.

I would also like to get a copy of your version that works on Raspberry Pi without the Menu's.

I would like to input Serial on the WRT54G serial port, and have it come out on another WRT54G serial port. Using the mesh as the carrier. How hard is that?

Anybody else have some thoughts?

Kip

If you don't mind adding hardware to get you there, BlackBox has some VERY NICE serial-to-IP adapters (single serial & dual serial units) that work very well (we use them at work). I haven't tried it to make sure, but these type of adapters should not care that you are sending them through the mesh rather than the standard internet !!

The first time in McKinney we started at 6:30pm. Yeah, if we can get
the backroom near the projector there would be some sockets with our
power strips.

How 'bout 'Great Outdoors' east of 75 on Eldorado? Not sure if they
close at 8 or 9 (website says both).

There's also Dickie's (closes @9pm) just south of White on 75 on the
north bound side.

I just don't know which one(s) have any power sockets near the tables.

Anybody else have some other ideas?

>I am interested in seeing your progress moving the SW menu's to
>Raspberry Pi.

I'm kinda at a pausing point. I'm trying to decide how to handle the lone
ethernet socket. I'm leaning away from the San Diego crew's method of
using vlans and going with a switch for LAN or WAN for that port.

>I would also like to get a copy of your version that works on Raspberry

I'll bring my Pi.

>I would like to input Serial on the WRT54G serial port, and have it come

Trivial. Download 'ser2net' out of the packages on both nodes and setup the config files accordingly. Set up one end as a client and the other end as a server, which will wait for connections. Didn't I give a talk about this? :)

I do not mind extra HW but I do mind $230.95 each side.
I can set a 1200 baud packet link with HT's for less than that.

I think I can do better with two MESH Nodes.

Kip:

Whoops, I should have included the model number in my original e-mail . . . this is what we use:

Single port:

http://www.blackbox.com/Store/Detail.aspx/1-Port-10-100-Device-Server-RS-232-422-485-DB9-M-Kit/LES301A%c4%82KIT

Still kind of expensive (at $131 each side), but nowhere the $230 each side that you thought !!

In case you're interested in the dual-port (at $201 each side):

http://www.blackbox.com/Store/Detail.aspx/2-Port-10-100-Device-Server-RS-232-422-485-DB9-M-Kit/LES302A%c4%82KIT

Not a lot of comments. If nobody objects lets do Dicky's at near White
on the Northbound side. 6:30.

Kip

Dickey's BBQ in McKinney is on the north side of the McKinney Post Office,
on the north side of E Bos D'Arc Rd.

If you're coming from the south then take the exit for Louisiana/Virginia
Pkwy and continue north to the Post Office.

If you miss that exit you can take the exit for White Ave, turn right
at White Ave (going east), turn right again at Redbud Blvd and go south
towards the Post Office. Dickey's will be on your right after turning
right (west) at E Bos D'Arc Rd.

See you there!

2854. FW: All NANUK watertight protective cases 50% off!

Yahoo group: DAWG-HSMM
Date: 2014-02-18 21:48:36 UTC
From: J.Gordon Beattie, Jr., W2TTT
Topic: 2854 Message: 2854

Randy had started an offline discussion about the need for cost-effective cases. Besides Pelican, there is Seahorse and Nanuk.

Thanks & 73,

Gordon Beattie, W2TTT

Dunno about you but I think we had a good turnout last night at Dickey's. I think the manager at Dickey's was a little surprised to see us come in and unpack a bunch of laptops and stuff. Maybe we should get our food first before we start unpacking laptops and such just so they don't think we're just there to abuse their tables and power outlets. At least we didn't have to run a cable to the kitchen to get power. :)

How many showed up? Somewhere around 10, I think, and we had a visitor make the hike from Ada, OK.

I liked how it turned out last night with lots of firmware loading, showing off a couple of Bullets, a little swapfesting going on, and a good bit of information getting passed around. Despite it getting a little crowded it turned out to be a good workshop, which I enjoyed.

How 'bout you??

Hello fellow Mesh'rs,

I traveled from Ada to participate and came away with all my questions answered. I purchased an antennae from Titan and a Bullet2HP off ebay today to place in the Central of our town. We have a failed glass plant (imagine that) and it has a very high silo for which I got permission to place this unit on. I was told it even has an elevator to the top? Beats climbing, huh. Thanks again guys for your enthusiasm and kind generosity.

How much easier does it get? :)

You know where we are (but can move around a bit) so you're always
welcome to come down and visit or just ask further questions here on
the mailing list.

We enjoyed the visit and so glad to get all your questions answered!

Best of luck and 73

2859. More BBHN nodes

Yahoo group: DAWG-HSMM
Date: 2014-02-20 18:12:24 UTC
From: Bill
Topic: 2859 Message: 2859

It was a great meeting Tuesday evening. Got a chance to test my first BBHN node. Works good.
Since the meeting I have installed a second node on a WRT54GL and I also was able to get
BBHN running on a Raspberry Pi. :-)

Thanks for setting up the meeting.

Bill, are you using the HSMM-Pi software? How's that working out?

>Thanks for setting up the meeting.

Generally third Tuesdays. Watch the mailing list here for times and
locations. Suggestions for meeting places are greatly appreciated!

Yes, the HSMM-PI. I changed the ssid to the BBHN id. Are there any other changes that I should make to make it fully BBHN compliant?
It looks like the admin capabilities are a little sparse at this point, but enough to get going. I haven't explored it yet but I assume that all the admin stuff is possible by editing conf files. Status screens might be a little more difficult?

If it's meshing with your WRT's then no. If not then make sure you have
the SSID exactly correct. Also make sure to turn off the secure-plugin
to OLSR, if it has been enabled. That's about all I can think so.
If it's still not meshing, give a holler!

>Status screens might be a little more difficult?

Agreed. All the admin stuff is about config files. :) The web interface
allows you do modify them and execute helper scripts and programs without
knowing the Unix shell, editors, which files to mess up, and all that
other good stuff.

Yes, it's meshing!!!! It looks like the security plugin is not loaded by default (at least not from olsrd.conf).
Have you tried to build the olsrd core with the admin options enabled?

>Bill

When we went from HSMM-Mesh v0.4.3 (when the original HSMM-Pi was written) to BBHN v1.0.0 last August the security plugin was turned OFF in the WRT54G's. Because of this and a few other changes made, anyone using HSMM-Pi should probably have a look at this document:

http://www.broadband-hamnet.org/documentation/171-broadband-hamnet-v100-quickstart.html

If you're not familiar with our website and you intend on working with the mesh firmware (or compatibles) then I would STRONGLY encourage you to visit and browse the broadband-hamnet.org website!

2865. Digital Tuesday - NE Tarrant/Denton County

Yahoo group: DAWG-HSMM
Date: 2014-02-21 19:26:38 UTC
From: Jason, kc5hwb
Topic: 2865 Message: 2865

Greetings All,

We want to setup a Digital Tuesday for NE Tarrant and Denton Counties, similar to the one that Rusty has in McKinney each month.

This meeting will focus mostly on the Flower Mound - Grapevine - Mid Cities - N Fort Worth areas that a group of us are trying to deploy BBHN to. Anyone and everyone is welcome to attend, but we'll be mainly talking about nodes and BBHN activities in these areas. Several nodes are already in place.

If you are new to BBHN and have questions, you are also invited to attend. If you have tower space at your home, or in a prominent area, and are willing to allow us to deploy a node (at no expense to you) then you are also welcome to attend.

We will probably meet somewhere around the Grapevine Mills Mall area, at a restaurant. This way we can pull people from Mid Cities, Grapevine, Colleyville and South Denton county. If I can get an idea of who wants to attend, I can better determine a location (or perhaps we just see who shows up this first time and change venues if needed on the next gathering)

Feel free to email me directly at kc5hwb@... if you have questions or anything you want to contribute. Please RSVP to this event if you can, just so I can get an idea of how many people to expect.

We are planning our first meet on Tuesday, March 4. I will send another email next week to verify location. Any suggestions are welcome.

Hey folks

Sorry I haven't emailed before now, but we are still planning the Digital Tuesday Event on Tuesday evening at 7pm, March 4. We'll be meeting at the Fuzzy's Tacos in Grapevine, at the corner of Glade Rd and Hwy 121. I've had only a few replies to my last email, so we should have plenty of room to people who are interested in attending. My hope is to keep this going each month, and let the group grow with time.

Please reply with any questions. I look forward to seeing several of you there.

Jason - KC5HWB

2867. ANNOUNCEMENT: 2014 ARRL/TAPR DCC (Digital Communications Conference) - Austin, TX, September 5th - 7th

Yahoo group: DAWG-HSMM
Date: 2014-03-14 23:14:18 UTC
From: Mark Thompson
Topic: 2867 Message: 2867
Attachments: 4 described; binary payloads are missing from this source WARC

Please forward this announcement to clubs, groups & hams who might be interested.

33rd Annual 2014 ARRL/TAPR DCC (Digital Communications Conference)
Announcement

Friday, September 5th - Sunday, September 7th

Austin Marriott South in Austin, TX

The DCC is returning to Texas this year.

The DCC has two days of Technical forums on Friday & Saturday and
a concurrent Introductory forum on Saturday.

On Saturday night the banquet will feature an interesting speaker and
the Sunday morning Seminar will be a deep-dive into a technical topic.

Those who submit Technical Papers for inclusion in the annual DCC Proceedings will receive preference for a forum,
however you can propose to present a forum without submitting a technical paper.

There will be free tables in the demo room to demonstrate projects and vendors to demonstrate products.

We encourage those interested in attending the DCC to make your hotel reservations early to get special TAPR hotel rate.

Updated DCC Information Available on TAPR's Web Site at:
www.tapr.org/dcc

Follow TAPR & DCC Announcements on Twitter at:
https://twitter.com/taprdigital

TAPR & DCC Announcements are on TAPR's Facebook page at:
https://www.facebook.com/TAPRDigitalHam

ARRL/TAPR DCC 1/2-page Flyer & Full-Page Poster
in BOTH Graphic Image & .PDF Formats
Attached for Inclusion in Web Sites, Newsletters & Flyers.

2868. Digital Tuesday -- This Tuesday

From: Kipton Moravec
Topic: 2868 Message: 2868

18 March is the Third Tuesday. Where do we want to hold it this week?

It does not matter to me I am pretty flexible.

We had outlets at Dicky's BBQ in McKinney. So I like that.
They are also open to 9:00 I like that.

Anyone want to propose somewhere else?

I would like to agree before Sunday night, so I can get the word out.

Regards,
Kip

Yup, lots of places but which ones can we plug in at?

Zaphod, how 'bout, when you have some time, do a little recon' for us
and let us know which, if any, places that have a couple of power sockets
in the dining area, maybe if they have WiFi available.

>room, what do we need the plugs for?

Erick,

Actually, we need wall/power sockets to plugin an extension cord and
power strip for laptops and nodes, which are all low power stuff so
we're not going to put a dent into someone's electricity bill.
We can do with one socket as we did last month.

Last time was a big month and we had about a dozen folks. Let's say
'tween 6 & 12.

A private room would be nice if it only requires a reservation but we
can shlep off into a corner, near a power socket, if the place isn't
busy on Tuesday nights.

How's that?

2875. Installing the firmware on a Openwrt router..

Yahoo group: DAWG-HSMM
Date: 2014-03-18 21:15:32 UTC
From: <chrysostome1@...>
Topic: 2875 Message: 2875

Hi everybody,
I have a router that is running openwrt adjustment
http://downloads.openwrt.org/attitude_adjustment/12.09-rc2/ramips/rt288x/
http://downloads.openwrt.org/attitude_adjustment/12.09-rc2/ramips/rt288x/
I would like to install the hsmm firmware but I can´t find a good tutorial that details it...
Is there a link that shows how to do it ?
Thanks

Just follow the normal install...
Openwrt, DD-WRT, Tomato, etc follow the same format as the original Linksys instructions...

Same 192.168..... Same passwords after doing the reset...

Go to the admin area and install a new firmware upload...

This has worked for me and I've pickup just about every version of the above at our local Goodwill here in Austin...

Yahoo group: DAWG-HSMM
Date: 2014-03-22 18:02:32 UTC
From: Frank Roesch
Topic: 2868 Message: 2880

Has anyone in the Dallas area put up a Ubiquti Bullet 2HP with an Omni antenna.

I'm contemplating about putting a no maintenance system on one of the water towers here in Rowlett, TX. to test and maybe spark some local interest.

I'm also wondering with the above unit would it be able to join any of the already established mesh networks in the area ?

Any suggestions and recommended vendors ?

Thanks

Frank K5FER

I have one ready to deploy that currently has an omni attached. I have a location in Garland, Richardson and Rockwall that currently have WRT54G's with stock antennas. I can tell you from my old QTH in Rowlett to the Garland location a pair of Ubiquiti Bullets made the trip of about 4 miles with grid antennas. Where is the water tower location, I would like to use RMD and see if any of the locations listed above might be feasible?

Not quite -- I'm using the WN721N model with good success with the
current release. Most any Atheros-based wireless adapter should
work fine with the RPi.

If you want to use the Edimax models then you'll need to back up to the
Sept 2012 release of Raspian before the networking changed. Oh yeah,
if you do that then don't 'apt-get upgrade' your Raspbian release or
your Edimax still probably stop functioning.

This is what I had to do to get HSMM-Pi working with the Edimax adapter.

Firmware for what, Chris???

There is no DAWG-HSMM software, official or otherwise. If you're looking for firmware for the WRT54G or selected Ubiquiti devices then visit http://broadband-hamnet.org and visit the download area.

If you're looking for something to run on your Raspberry Pi then google HSMM-Pi but they are not affiliated with the Broadband-Hamnet group. Their package for the RPi does "mesh" with the BBHN firmware though. Sadly, it does have some minor problems and hasn't been updated in about 8-months, give or take.

OK, I see the difference seems to be detachable vs. built in antenna.

Your comments about the Edimax models sounds like a discussion at McKinney meet this past Tuesday. Any reason to prefer Edimax?

I recognize your signature from the Siteplayer list.

It was small, cheap, and available when I got my Pi. If I can get away
with something that sticks out like the Tl-Links they make for a great
WiFi module.

>I recognize your signature from the Siteplayer list.

Yup, I was actively supporting those folks back in the day. It was an
interesting little piece of hardware for its time. A $35 RPi blows it
away these days.

Gotta run help the wife. Cya!

RMD findings:

Rowlett HS Water Tower ---> Garland Location
9.9km (6.2 Miles)
Might work with directional antennas, obstruction near downtown Garland. Shortest path not the best in this case.

Rowlett HS Water Tower ---> Richardson Location:
15.48km (9.62 Miles)
Should be viable with 15dBi Omni antennas according to RMD, I am skeptical it will make the trip without a directional antenna on at least one end.

Rowlett HS Water Tower ---> Rockwall Location
11.6 km (7.2 Miles)
Should be viable with 15dBi Omni antennas according to RMD, I am skeptical it will make the trip without a directional antenna on at least one end.

I can put a grid antenna on Richardson and possibly a Rootenna on Rockwall to see if we can make the trip. I can also try a grid on Garland but I have a feeling it wont work. I think the location of the HS tower is good and worth setting up a node.

I have a Bullet M2HP up at the qth. It is 40' up over in Bedford. On Tuesday morning, we have a deployment at 250` in Denton. We are still working on the deployment email miles south of Farmersville. The trustee of the tower is having some health issues and coupled with a busy schedule had really slowed things down there. That is a Rocket with H&V antenna by the way. Next week I will report back on the Denton testing. I have been told that I can deploy nodes on two communication towers near Denton. One at 1000' one at 750' or so. Maybe that will bubble to the top one day.

Rob,
All locations (Rowlett, Rockwall, Garland, Richardson) are suburbs
of Dallas, Texas to the east around to the north. This is the
DAWG-HSMM, Dallas Area Working Group of (what was formerly known as
HSMM, now BBHN).

Hey all, just came from the Belton Ham Expo in Belton Texas where I picked up a WRT54GSV4 router. I brought it home, verified it was "stock" and then proceeded to move on to upgrading. The only file I could see on the Broadband-Hamnet website to use is the same one for the earlier versions and models - bbhn-1.0.0-wrt54g.bin.

This software gets about 6 to 8 bars in the upgrade process and fails out.

I'm not able to determine why it's failing, but I'm also wondering if I'm using the wrong firmware.

Please advise.

Thanks,
-Lee, KE5UBF
Bedford, Texas

Lee,
When you get to the download page you need to use the on page scroll bar and scroll down to the one that says firmware for a non-mesh wrt54gs_v4 in the right hand column...
Should be the 11th item listed...

Let us know if this works...

Look a little harder and you'll see one for a wrt54gs. Yes, the version 4
has the memory of a G or GL but it should work.

Yup. If the LAN LEDs all came on shortly after power up and then went
out you may have a chance. Either way you may wish to read the article
about Failsafe Mode:

http://www.broadband-hamnet.org/documentation/71-using-safe-mode-to-reset-a-forgotten-pass
word.html

If that works then you should be able to get your router into a usable
state and try another reload.

If that doesn't work then try the TFTP method described here:

http://www.broadband-hamnet.org/documentation/72-installing-firmware-with-tftp.html

Notice that the download area has a TFTP.EXE program for Windows, if
that's your poison of choice.

If all that doesn't work then recovery will probably require a JTAG
interface and a bit of time.

Right you are. The '16W' has N wifi where the cheaper '18W' I posted doesn't. Some other small differences. I'm seriously tempted to get one of them and the N vs non-N is making for an interesting choice. Probably go with the N as I need that kind of performance on a little networking experiment I'm working on this year.

2914. WRT1900AC?

Yahoo group: DAWG-HSMM
Date: 2014-04-02 18:56:55 UTC
From: Lawrence Landis
Topic: 2914 Message: 2914

Hi,

I just recieved an announcement from Linksys/Cisco about
the WRT1900AC. Somewhat expensive, but claims to be
written to use OpenWRT.... So, does that mean it is likely a
good candidate for BBHN?

Cheers,

Topic: 2914 Message: 2915

I think it could be a good candidate but I'm still not quite sure how one will be able to achieve point to point connections using high gain antennas ?
The wrt1900ac has four antennas. Which ones are 5ghz or 2gz ?
Do we need dual band directional antennas or dual band omnidirectional antennas for ptp or ptmp connections ?
How much does a directional dual band antenna cost ?
Do we need a N Female to Y type 4x rp-sma male splitter combiner cable thiat can cost over $80 to combine all 4 antennas source into one ?
In my opinion while this router offers new opportunities for speed and dat transfer, its hardware poses serious obstacles that can cost a lot of dollars to overcome. .

DAWG

I have a Sony SNC-RZ30 series camera set up on a mesh node/access point combination and can get to the camera via Firefox but cannot reach the controls. The camera asks for either the Java Applet Viewer or Server Push Viewer. When I click on the Java Applet Viewer I am blocked. (The only information I can find on the Server Push Viewer is that it works in Netscape only.) I cannot determine if I am being blocked by the windows firewall, the browser, or my antivirus programs. BTW I cannot reach the camera at all with Internet Explorer. I get the same results with my XP machine and with my Windows 8.1 machine. Any suggestions on means to overcome this problem will certainly be welcome. I hope to use this equipment for a demonstration at the Ride for the Heroes bike race in Aledo on April 19. If you think of if, please copy me direct as I receive only periodic recaps of messages.

In IE open your camera's web page. Go to the PAGE menu drop down and select...
Compatibility View settings.
When the tab opens up check both boxes at the bottom of the page and apply it.

Try loading your page again.

A lot of older web apps and active plug ins hang in the new IE without this turned on.

My home security DVR is like that.

The node is a Ubiquiti Bullet M2HP with Terrawave 15dbi omni at 250' up. Using another bullet and 12dbi Omni on a push up pole, connections in the 2-3 miles were made. CQQ was a steady 85%. While not definitive, this indicates a relatively solid connection. More testing will be done in the near future for packet loss, throughput, etc. It started to rain during the testing and things were called off.

FWIW on testing...

The next time I get back to my M2HP I'm going to turn on SNMP and point a MRTG server at it. That gives the charts below which are an indicator of just how well it's working. Note the peak on the weekly chart and the 892kB/s Maximum figure. That's the result of a SFTP transfer of 21 GB of youtube videos - which made a reference I'll be able to test against the next time I'm working on the wireless systems - like when I start using the bullet. These charts came from a WRT54GS with SNMP running. The extra memory of the 8 MB WRT54GS made it possible to easily install SNMP.

More good info and some charts to compare against are available at VillageTelco.

I am about to install a node on my tower, but I need to know what type of CAT5 cable to purchase and where to find it? I will only need 50'.with RJ45's on each end.
Thanks,
Jeff N5XHI

Are you considering plenum rated CAT-6 for outdoor use and shielding? Is there an available grounded conduit for data cable runs? How does one ground a WRT up on a tower to reduce interference, ground loops, etc? 73, Ron kf5saq

Why would you want/need plenum rated cable for outdoor use? :)
I'd probably go for the shielded twisted pair though.

>How does one ground a WRT up on a tower to reduce interference,
>ground loops, etc? 73, Ron kf5saq

O-ring terminal connector around one of the antenna connectors with
wire to the tower or the box's (for your WRT54G) ground system.

Outdoor cable is frequently also plenum rated. More shops know about plenum rating than the equivalent wording as outdoor, so I just go with the flow - whatever. Shielded twisted pair would be recommended to help it operature during storms, interference, better humidity block; not that propagation will be good in such weather. I recommend conduit not so much for shielding but to provide a barrier to squirrels, etc which like to chew the jacket off. For temporary usage most anything works.

Generally speaking, if you’re looking for a long-term outdoor deployment, you probably want to use the real UV-rated and gel-filled (also called “flooded”) cable. Something like this: https://www.tessco.com/products/displayProductInfo.do?sku=393655

Mike, I've heard that the gel-filled cable is messy to work with.
Does it need a different type of crimper for the ends?

Date: Tue, April 29, 2014**
*Time: *11:00 AM ET / 8:00 AM PT

2014 is proving to be a year of incredible opportunity in the mobility and wireless LAN market, with the deployment of 802.11ac, or gigabit Wi-Fi, hitting the mainstream. In addition, new developments such as the Internet of Things (IoT) and software-defined networking (SDN) will fundamentally change the way we approach developing and deploying those networks, at the same time transforming how IT is purchased, deployed, integrated and managed.

Attend this webinar to:

* Hear from a panel of IT leaders on meeting the challenges and avoiding mistakes in the migration to 802.11ac
* Discover how trends from 802.11ac and IoT will catalyze change in Wi-Fi networks
* Learn about SDN and its impact to the network

Join us on 4/29

You don't have to crimp it. You can terminate it into a cat5/6 jack inside the enclosure and use a short patch cable to connect the gear. That being said, when you cut the jacket back to crimp the cable, yeah, it's messy, but you can wipe the gel off the individual wires before crimping with a standard crimper.

Rusty andMike,
We've used some UV resistant cable around here that was not flooded and could use the normal crimper I think.

The conduit is to deter the furry critters from eating through the outer jacket and shield. You should probably plan on working with metal conduit, versus plastic, as it will last much longer in harsh environments. Also offers protection from direct sun and rain exposure. Beats working with flooded cable and getting icky pick or gorilla snot all over your hands! When working with the shield, you should use good quality plugs and jacks that incorporate the sheild, at least at one end of the cable run. I have used these in MTSOs and COs with no problem.

Have you done an RF survey from the proposed mounting location?
Depending on what else you've got on the tower, you may well need a
channel filter on the node to keep the front end clean.

Can you confirm that it is a Bullet M2 HP? I am sure someone on the board will correct me if I am wrong but if it is not an M2 version I think the firmware is not compatible. I have scraped together 8 Bullet M2 HP models in the last week and flashed them with that same firmware with no problems so I can attest the bin is OK.

Yes there is the 2HP and then the M2 HP. I believe the memory isn't enough in the 2HP's for the firmware implementation. Looks like you have a high power access point now! That's what I do with the 2HP's I have on hand so I can wirelessly access the actual mesh nodes.

That's a great AP and it has some handy tools. If you do want to use
it for a mesh node and can work with Luci instead of the nice BBHN GUI
- check out our NW mesh group...

Your probably right on the memory but my understanding is that the non-M
2 series contains a totally different microprocessor so the software
wouldn't run even if it had enough memory. :-\

I have BBHN W0UO-1 on the air. I am located 100 yards north and 100 yards east of the junction of FM3325 (Farmer Road) and Meadowcrest in eastern Parker County. I have a 19 dbi flat panel pointed roughly at N9BAV, or, if you have a map, just at the point where Highway 199 crosses Lake Worth (east end of the bridge). The other antenna is a 24 dbi barbecue dish pointed just west of the intersection of Interstate 20 and FM3325.

I am interested in any reports of reception.

From: Kilgore
Topic: 2952 Message: 2952

The 2014 Wild Ride Against Cancer will happen Saturday, May 17. The weather forecast is for sunshine. There are many hams providing communications for the event. It will be a great day!

I wish to thank all those who have contributed to the Hams4WildRide fundraising team benefiting the Methodist Richardson Cancer Center. As of 19:00 hrs Thursday we have raised $325.

It's interesting to read the comments of donors.
https://www.crowdrise.com/Hams4WildRide

It's not too late to make a donation to the Hams4WildRide team. Please contact your friends and relatives. Post it on your Facebook or Twitter page. Give them an opportunity to donate to our team.

The processing fee listed is optional. Just click on the description for more info.

Thank you.

2960. HamCom sessions

Yahoo group: DAWG-HSMM
Date: 2014-06-11 22:38:43 UTC
From: Rusty Haddock
Topic: 2960 Message: 2960

For those attending Hamcom the published schedule includes the following BBHN-related talks:

Fri 4pm Fairview 1&2 Mesh Workshop Kip Moravec
Sat 11am Fairview 1&2 BBHN Update 2014 Glen Currie
Sat 4pm Shady Grove Introduction to BBHN Kipton Moravec

Have you got questions? Many of the development team will be available for the Mesh Workshop on Friday afternoon. Bring your mesh hardware to play and/or troubleshoot.

See you at the 'fest!

Serious fustercluck with Hamcom scheduling. Apparently they were
even making more last minute (literally -- Thursday night) shuffling
of classes.

The workshop when off pretty good. Glenn, gave his talk at 10am on
Friday but not many folks showed up. Actually, it was a bit later as it
was about 10am with some of the Austin crew saw his name on the schedule
and ran to pick him up at the hotel. Glenn did a shortened version at
the Workshop though.

Saturday's 11am is now my "Applications and Accessories" and Kip is
doing his Intro at 3pm (not 4 as above -- my typo).

Then again, HamCom could very well change things again before I get
there in the morning. (fail)

Come join us if you're at HamCom!

I understand -- I was at the door opening it every so often to let some cool air flow in (all those hams generate a lot of hot air :) but not so much as to keep Kip from being drowned out by the noise from the hallway. Max'd out I counted about 44 occupants with little standing room left. I didn't count but I wouldn't doubt that well over a dozen people peeked in, saw "no room at the inn", and turned around.

The HamCom Board of Directors gave me several excuses for the scheduling snafu. 1) The ARRL's large presence for the Centennial and 2) Hamcom being not only the West Gulf but also the Delta Convention and 3) building security wanted all talks finished by 4pm on Saturday so as to facilitate clearing out the Centre sooner. The last item "killed" at least 6-hr worth of talks. Personally, I found this silly since the prize drawings started at 5pm but...

I will say that it has been discussed that the BBHN group get a block of three hours in one of the large rooms so that we can divie it up as we want. Hopefully HamCom will let us do that next year.

We hope that folks enjoyed our talks and came away with something useful.

>door and gave up.

I understand -- I was at the door opening it every so often to let some cool air flow in (all those hams generate a lot of hot air :) but not so much as to keep Kip from being drowned out by the noise from the hallway. Max'd out I counted about 44 occupants with little standing room left. I didn't count but I wouldn't doubt that well over a dozen people peeked in, saw "no room at the inn", and turned around.

The HamCom Board of Directors gave me several excuses for the scheduling snafu. 1) The ARRL's large presence for the Centennial and 2) Hamcom being not only the West Gulf but also the Delta Convention and 3) building security wanted all talks finished by 4pm on Saturday so as to facilitate clearing out the Centre sooner. The last item "killed" at least 6-hr worth of talks. Personally, I found this silly since the prize drawings started at 5pm but...

I will say that it has been discussed that the BBHN group get a block of three hours in one of the large rooms so that we can divie it up as we want. Hopefully HamCom will let us do that next year.

We hope that folks enjoyed our talks and came away with something useful.

If you're talking about the Introduction in the Shady Grove, the
room I was standing at the door to, Kip will have to answer if and where
he makes his material available.

Subject: ARRL/TAPR DCC Call for Papers

July 14 is the deadline to submit papers for the proceedings of 2014 ARRL/TAPR Digital Communications Conference, September 5 – 7, in Austin, Texas.

You do not have to attend the conference to have your paper included in the proceedings. Your paper on any technical topic relevant to amateur digital communications will be published as submitted and you will retain all rights.

Please e-mail your submission no later than July 14 to Maty Weinberg, KB1EIB, ARRL Production Coordinator, at maty@...
Send text files and images separately and do not attach Zip files. Total of attachments cannot exceed 5 Mbytes per message.

You'll note the July 14 deadline. Maty needs the extra day due to the Centennial convention activities.

2970. New Broadband-Hamnet firmware w/ 5.8-GHz support

Yahoo group: DAWG-HSMM
Date: 2014-07-07 06:28:33 UTC
From: Rusty Haddock
Topic: 2970 Message: 2970

Hot off the presses!!!

July 7 2014
Broadband-Hamnet Greatly Expands its Usefulness, Adds 5.8 GHz Support

Broadband-Hamnet is proud to announce a new firmware release, an update to the original Linksys WRT54G/GL/GS gear, and for the Ubiquiti firmware originally released for the 2.4GHz Ham band this past February.

With this release, Broadband-Hamnet now supports the Ubiquiti M5-series hardware, giving Hams use of the 5.8 GHz band for mesh networking.

Among the release's many new features are the ability to easily connect collocated nodes into clusters and to span the mesh across both ham bands.

To read the Firmware release notes, please visit the 1.1.0 Release Notes (http://www.broadband-hamnet.org/documentation/195-bbhn110-firmware-release)

For our Development Team: Conrad, KG6JEI, and Andre, K6AH...

Jim Kinter, K5KTF
Webmaster
Broadband-Hamnet

2973. Digital Tuesday, pushed back to July 22

Yahoo group: DAWG-HSMM
Date: 2014-07-13 01:20:12 UTC
From: Kipton Moravec
Topic: 2973 Message: 2973

Too many things going on with Rusty and me to have a Digital Tuesday this week.

So we are going to have it July 22, starting at 6:30 at Dicky's Barbeque in McKinney.

There is a new version of the MESH software that adds some new features and 5.4 GHz Ubiquity devices. The 3.4 GHz and 900 MHz units will follow in the next upgrade.

Kip

I suspect that the -RM is simply tagged onto the end to for
"Re-Manufactured" or refurbished. Other websites have the
same suffix for their refurbished units as well.

2979. Assistance Requested for Antenna Test Wednesday

Yahoo group: DAWG-HSMM
Date: 2014-07-16 18:55:21 UTC
From: Douglas Kilgore
Topic: 2979 Message: 2979

Attention North Texas Amateurs

Tonight Wednesday Jul. 16, the Dallas NBEMS Learning Net will conduct a special activity in place of its usual discussion/training. Tonight the net will assist the City of Richardson Emergency Operations Center (EOC) in evaluating the simplex range/azimuth capability of its amateur radio station's VHF antennas. As it will be helpful to operate with stations at a variety of distances and directions from the EOC, all stations are encouraged to participate.

The net will begin at 1930 local time on the Richardson Wireless Klub 147.12 (+) no PL tone repeater. Stations will check-in by voice and, if capable, by digital text using the MT63-2KL opmode. After check-in on the RWK repeater, stations will be requested to QSY to 145.70 FM simplex vertical polarization for a roll call. Stations may answer roll call either by voice or by digital text. As stations respond to roll call, they will be released.

In order to provide for detailed range/azimuth analysis, we will call for specific information from each check-in. This information may be provided either by voice or by digital text using the MT63-2KL opmode. For voice check-ins, stations will give their CALLSIGN, FIRST NAME, LOCATION, POWER (Watts), and ANTENNA HEIGHT (feet). Stations having FLDIGI are requested to use a special digital check-in macro.

US National Grid coordinates for station "LOCATION" is preferred. Stations that are unable to provide USNG coordinates for "LOCATION" may substitute Mapsco page number, Maidenhead grid, GPS coordinates, or closest city, whichever provides their location with the greatest accuracy. This should be an interesting, fun, and useful net.

Instructions for Fldigi users is below.

Please join us.

Doug Kilgore KD5OUG
kilgore1317@...

For information on the Dallas Narrow Band Emergency Messaging System Learning Net, visit our Yahoo group:
https://groups.yahoo.com/groups/dalNBEMS

For stations having FLDIGI, here is the macro text, ready for pasting into the FLDIGI macro editor for a blank macro button:

<GOHOME><LOCK:on><TXRSID:off><TX>
<LD> <LT>,<MYCALL>,<MYNAME>,LOCATION,POWER,ANTENNA HEIGHT<RX>

IMPORTANT -- After pasting the macro text into the macro editor, stations are to replace "LOCATION", "POWER", and "ANTENNA HEIGHT" with the particular information for their station (retaining the separating commas). For example, here is what the macro text for Paul Newman, KA5TYW, would look like:

<GOHOME><LOCK:on><TXRSID:off><TX>
<LD> <LT>,<MYCALL>,<MYNAME>,14S QB 15899 50859,45,15<RX>

Here is how the transmitted digital check-in for KA5TYW would appear in a receiving station's FLDIGI receive (yellow) pane:

2014-07-16 0942,KA5TYW,Paul,14S QB 15899 50859,45,15

This email is free from viruses and malware because avast! Antivirus protection is active.

Subject: [CSVHFS News] There's still time to register for CSVHFS 2014, but if you can't come ...

There is still time to register for the Central States VHF Conference in
Austin, Texas. The conference is only two weeks away (7/24-27) and you
know what you'd really like to do is get out of town and have a nice visit
with all your Central States friends down in Texas. Just imagine how fun
it would be to sit back on the Lone Star Riverboat, grab a beer or a
margarita (yes, K5AND will be bringing multiple gallons of margaritas) and
have a nice chat about how awful HF propagation will be as we exit the
sunspot cycle and how VHF propagation will not suffer the same fate! We've
arranged over one million bats to share in your conversation and wish us
well with propagation conditions. They will also eat up all the insects so
you can have a insect-free boat trip! Your friends will miss you if you don't come, but you'll also be missing
out on some great speakers -- *Gerald Youngblood, K5SDR*, President and CEO
of FlexRadio Systems will be talking at the Friday luncheon about noise. Over the last several years designing he has performed a great deal of
research into noise on the bands, noise in radio systems, and how best to
measure radio performance to more closely understand how radio designs
respond to noise. You will hear interesting and surprising facts about
noise along with some true, but very counter-intuitive ways that radio
settings can adversely affect noise. *Jim Klitzing, W6PQL*, will be flying in from the Bay Area in California to
share his insights into electronic design and high power amplifiers. Jim
has been supplying the amateur world with high power amplifier boards and
filters and excellent advice on building a VHF and microwave stations. Jim
will be talking about RF components and important information that both
designers and operators should know. Our banquet speaker is *Jimmy Treybig, W6JKV*. Jimmy founded and was the
CEO of Tandem Computers, a Slicon Valley manufacturer of fault tolerant
computers. Tandem delivered its first product in 1975, went public in 1977,
was ranked by Inc Magazine as the fastest growing public company in 1980,
and was on the Fortune 500 list of largest companies in 1984. Jimmy retired
in 1996 when Tandem was a $2.3 Billion company with 8000 people worldwide.
Today Tandem is part of HP. Jimmy has done over SEVENTY six and two-meter
DXpeditions to *over 50 countries*. Jimmy will be sharing his perspectives
on family and DXpeditions. Of course we have a whole cadre of technical speakers for the conference
including: K0MHC, W0ZQ, N6NB, WA5VJB, K5TRA, K4SME, W4ZST, N5YC, K6MIO,
K5AND and W6PQL. So c'mon and register and come down to Texas and have some fun with us --

http://www.csvhfs.org/2014conference/2014Registration.html We'll have a good time even if you don't come, but it would be better if
you were here with us! *We know sometimes life gets in the way and maybe you can't make it this
year...* We'll miss you, but you can still get a copy of the proceedings
to read all the excellent papers our authors have written for you. We have
the proceedings in hand and would be glad to mail you a copy -- to get
yours, just use the registration link above, but deselect conference
registration and instead select "Extra Proceedings (deliver to home)." We'll drop your copy right in the mail! 73,
Steve
Hicks
N5AC
2014 CSVHFS President

It is a 24 db grill type reflector antenna.

It is big, and shipping will cost more than the antenna.

I picked these up in Arlington, and am charging what I paid for them to
get the spread out in the community.

2985. airMAX NanoStation M3 paper to be presented at DCC in Austin

Yahoo group: DAWG-HSMM
Date: 2014-07-22 14:17:38 UTC
From: John
Topic: 2973 Message: 2985

FYI

W2LNX will be presenting a paper on his experience with the airMAX NanoStation M3 at the ARRL/TAPR DCC in Austin Sept 5-7th. His experimentation included the use of 4 NanoStations. Apparently he was able to purchase them from a US distributor.

I'm also interested, but at the present I don't have the name of the distributor. I'm not sure if the model he used is the one I would want since I don't see any easy way to hook an external antenna.

http://ubnt.ca/nanostation-m/3-nanostation-m3-international-.html seems to be the model he used.

I will be attending the DCC (Digital Communications Conference), so I will be sure to get all the information I can.

2988. New release of HSMM-Pi

Yahoo group: DAWG-HSMM
Date: 2014-07-22 21:45:37 UTC
From: Rusty Haddock
Topic: 2988 Message: 2988

If you're interested in this download for your RPi....
I'm working on getting it loaded onto one of my RPi's so I'll
try to bring it to the meeting tonight.

This came from the HSMM-Pi group on Google+:

Scott Kidder OWNER Discussion - 11:11 AM

Today I released HSMM-Pi v0.4.0. It's mostly a bug-fix release to
address stability issues reported by users, and ensure compatibility
with Broadband Hamnet v1.1.2. You can find more details in the following
blog post: http://hsmmpi.wordpress.com/2014/07/22/release-0-4-0/

2989. LAN Messenger

Yahoo group: DAWG-HSMM
Date: 2014-08-06 16:06:21 UTC
From: ross_mazzola@...
Topic: 2989 Message: 2989

I'm leading the charge up here in the great white north (Rochester, NY) to use BBHN for public service and emergency communication support activities. I currently have two working nodes with an IP camera being advertised as a service on one of them. It works great so now I'd like to be able to demonstrate additional functionality of a system like this. Since BBHN is a technically a LAN, I thought that I would try a simple chat application called LAN Messenger. LAN Messenger is a cross-platform instant messaging application for communication over a local network. It does not require a server. I installed the program in the two computers that I plan to use with the mesh bodes and the program works when they are connected via a traditional wireless network but the program does not work when the computers are connected to the mesh network. The computers just don't "see" each other and don't connect through the mesh nodes. Does anybody have any ideas for why this might be? Unfortunately I am not a networking guy and I'd prefer not to use a server based IRC program until I have no other options. I'm hoping maybe all I have to do is something the ports in nodes?

Thanks & 73,

Ross

What ports is it trying to use? Video is going to require a TREMENDOUS amount of bandwidth. Your latency may be too great for the application to work and get and answer back. Its hard to say as Im only taking an educated guess as to what the issue is, without a wireshark view of the app trying to connect we are going to keep guessing at it.

LAN messenger is a instant messaging type app but it's peer-peer rather than client server. It's not video, though it sounds like there's already a webcam application being run. My guess is it's either something to do with the ports it requires or probably LAN messenger requires the ability to do broadcasts and those are not making it through.

From: ross_mazzola@...
Topic: 2989 Message: 2992

Thank you for the quick responses. Sorry for my confusing post. James is correct, the streaming video is working fine. It's the chat application that I need help with.

The LAN Manager chat program that I want use has default network settings of:
Multicast address= 239.255.100.100
UDP Port = 50000
TCP Port = 50000

My gut tells me that I either have to change something in my mesh node setup or change these settings. Problem is I don't know what to change or how. Would I do something with port forwarding?

From: Rusty Haddock
Topic: 2989 Message: 2993

I suspect the issue is that 'Lan Messenger' is seeing your PC's Ethernet settings and using UDP to broadcast to the "what it thinks" is a LAN. The issue probably is that, even with 'Direct' mode and your PC's ethernet port having a 10.*.*.* IP address, your PC is actually on a sub-LAN. This sub-LAN consists of the attached mesh node and any other machines attached to the LAN ports, not the entire mesh. Any UDP broadcasts sent (unless the program is manually reconfigured, if that's even possible) are sent only to those hosts.

Kinda deep if you're not TCP/UDP knowledgeable but that's the best I can come up with.

In my humble opinion I think Rusty has it correct. You could test the
theory by plugging both computers in the LAN port of a single router,
and I will bet it works.

Just looking at the web site, it appears to use broadcast packets.
There doesn't appear to be much in the way of protocol documentation
other than trying to dig it out of the source.

Have you tried using Wireshark to take a look at the packets on the air?

Topic: 2989 Message: 2997

Note to self: Read all messages in thread before replying..

Multicast address= 239.255.100.100
UDP Port = 50000
TCP Port = 50000

If you take a look at the packets with Wireshark, I'm willing to get you'll see the TTL set to 1. That means the packets won't cross the first router.

The second issue is an effective and efficient multicast routing protocol for mesh networks. A quick Google for "multicast routing mesh networks" will bring up many papers that show the problem isn't trivial. I can suggest Minimum Number of Transmissions (MNT) trees are likely the best way ahead, but I can't get too much deeper due to IP conflicts.

Yes. I have a chat server installed on my rasberry pi connected to one of my mesh nodes but I ran into problems advertising the service. And identifying a good, easy to use client program for other people to install on their computers was a challenge due to my inexperience in this area. That's why the 'no server needed" approach was attractive. What chat server and clients would you recommend? Perhaps I should revisit that approach.

The LAN Messenger program does allow the multicast address and port values to be easily changed. And there is even a field for me to enter a broadcast address. Would wireshark show me what I should set these values to?

Something else you can consider is a jabber server if you want an instant messaging experience like LAN Messenger. There are servers for all the main desktop operating systems and clients for almost anything.

From: Brian D Heaton
Topic: 2989 Message: 3006

W2TTT (Gordon) brought up the most common solution - IRC. There is a package called "ngircd" (Next Generation Internet Relay Chat Daemon) for BBHN/OpenWRT that provides the server function. On the client side, I use "Pidgin" as my IRC client on desktop (Windows/Linux/Unix). As a big plus, Pidgin supports multiple IM networks so you can learn that client once for all the different IM networks out there. On Android devices, I use "SimpleIRC". There are more complex and feature rich clients, but SimpleIRC is the easiest one to configure I found. At SEAPAC in 2013, we did a demo using IRC and had the instructions up for people attending to configure SimpleIRC and chat on the network in the room. It worked quite well.

The primary issue with IRC is that the server-to-server links have to be configured in the configuration file. This isn't a huge impediment if you put the IRC servers on fixed infrastructure nodes. For mobile deployments to areas that don't have fixed infrastructure, that can be a significant issue.

Serverless chat implementations, or perhaps better - server-based implementations with servers that find each other and setup links on the fly - are very attractive for MANET applications. Multicast works great for service discovery on wifi-based wireless networks, but not nearly as well for delivering user traffic. In 802.11 networking, every unicast wireless packet is ACKed or rebroadcast at Layer2. That function doesn't happen with multicast. Unless the higher network layers can detect loss and request retransmission, packets are lost.

If some programming smart person wanted to create the killer app for mesh networks (ham and otherwise), a good choice would be automagic service discovery and link establishment between IRC/XMPP servers. Something like Bonjour/Avahi for service discovery and NORM for reliable multicast transport would be good places to start. NGIRCD would be a good base IRC daemon to extend or it could be done as a custom transport to an XMPP server.

I would like to see all of these as I can help and learn...sorry you get so many mails but, I have to agree...you can also set your mail to filter our responses to a folder and then do a mass delete if you dont want to read them.

Wireshark will only tell you what it sees you have to make the decision as to what you want the ttl to be....just remember for every device it touches subtract one from the TTL....broadcast packets work a bit different.

3008. Re: LAN Messenger

Yahoo group: DAWG-HSMM
Date: 2014-08-08 20:04:53 UTC
From: mjculross@...
Topic: 2989 Message: 3008

All:

We had a similar problem in a customer's production environment where, after upgrding their network to employ both multi-layered switches & virtual LANs, packets with TTL=1 were no longer propogating through their network(s) & this was significantly interfering with the ability for existing legacy applications to properly communicate.
Here's a little trick that I refined to be used to temporarily work around the problem:
Testing on machines running RHEL5.x, I verified an ad-hoc method of changing the TTL on multicast messages on-the-fly that you may be able to use for some quick testing for getting the broadcast messages through your network switches & VLANs as follows:
On the machine where the packets are originating (as root), type the following (spaces are exaggerated for clarity):

```
# iptables -t mangle -A OUTPUT -d 224.0.0.22 -j TTL --ttl-set 3 [ return ]
```

This tells the iptables utility to force the TTL parameter = 3 (you can specify whatever value you need to cause your missing messages to make it through your switches/nodes) on all messages destined for the multicast address 224.0.0.22, where (in our case) this was the destination address for the IGMP V3 queries & reports that were not propogating on the network . . . these dead-letter packets were associated with the machine's participation in the targeted multicast groups: 224.16.23.212, 224.11.23.55, 224.16.23.229, & 224.16.23.253.
Maybe trying something like this (or something along the same train of thought) may help . . . let us know if/how this works for you . . .

That would be the best way of doing it as the network is going to subtract from the TTL unless you use an MPLS type network as then then inner objects will be invisible to the ttl until it gets to the end and then the MPLS part of the packet is stripped off...thus exposing the TTL to being hit with subtractions.

Subject: [DAWG-HSMM] Re: LAN Messenger

All:

We had a similar problem in a customer's production environment where, after upgrding their network to employ both multi-layered switches & virtual LANs, packets with TTL=1 were no longer propogating through their network(s) & this was significantly interfering with the ability for existing legacy applications to properly communicate.
Here's a little trick that I refined to be used to temporarily work around the problem:
Testing on machines running RHEL5.x, I verified an ad-hoc method of changing the TTL on multicast messages on-the-fly that you may be able to use for some quick testing for getting the broadcast messages through your network switches & VLANs as follows:
On the machine where the packets are originating (as root), type the following (spaces are exaggerated for clarity):

```
# iptables   -t   mangle   -A   OUTPUT   -d   224.0.0.22   -j   TTL   --ttl-set   3   [
return ]
```

This tells the iptables utility to force the TTL parameter = 3 (you can specify whatever value you need to cause your missing messages to make it through your switches/nodes) on all messages destined for the multicast address 224.0.0.22, where (in our case) this was the destination address for the IGMP V3 queries & reports that were not propogating on the network . . . these dead-letter packets were associated with the machine's participation in the targeted multicast groups: 224.16.23.212, 224.11.23.55, 224.16.23.229, & 224.16.23.253.
Maybe trying something like this (or something along the same train of thought) may help . . . let us know if/how this works for you . . .

Brian and Ross,
We had no trouble advertising the IRC server on the mesh. For some events we did not advertise the server to allow for a command channel for a select few units during the event. Mobile units can have server to server connections but you need to know who they are in advance. We've been discussing a discovery service as well as a registration service to all types of servers including IRC and VOIP. Time has been an issue for all of us, but at least we see a need. There has been work done for Directory Services which will be a good starting point.

Subject: Re: [DAWG-HSMM] LAN Messenger

W2TTT (Gordon) brought up the most common solution - IRC. There is a package called "ngircd" (Next Generation Internet Relay Chat Daemon) for BBHN/OpenWRT that provides the server function. On the client side, I use "Pidgin" as my IRC client on desktop (Windows/Linux/Unix). As a big plus, Pidgin supports multiple IM networks so you can learn that client once for all the different IM networks out there. On Android devices, I use "SimpleIRC". There are more complex and feature rich clients, but SimpleIRC is the easiest one to configure I found. At SEAPAC in 2013, we did a demo using IRC and had the instructions up for people attending to configure SimpleIRC and chat on the network in the room. It worked quite well.

The primary issue with IRC is that the server-to-server links have to be configured in the configuration file. This isn't a huge impediment if you put the IRC servers on fixed infrastructure nodes. For mobile deployments to areas that don't have fixed infrastructure, that can be a significant issue.

Serverless chat implementations, or perhaps better - server-based implementations with servers that find each other and setup links on the fly - are very attractive for MANET applications. Multicast works great for service discovery on wifi-based wireless networks, but not nearly as well for delivering user traffic. In 802.11 networking, every unicast wireless packet is ACKed or rebroadcast at Layer2. That function doesn't happen with multicast. Unless the higher network layers can detect loss and request retransmission, packets are lost.

If some programming smart person wanted to create the killer app for mesh networks (ham and otherwise), a good choice would be automagic service discovery and link establishment

between IRC/XMPP servers. Something like Bonjour/Avahi for service discovery and NORM for reliable multicast transport would be good places to start. NGIRCD would be a good base IRC daemon to extend or it could be done as a custom transport to an XMPP server.

On 8/8/2014 03:57, ross_mazzola@hotmail.com [DAWG-HSMM] wrote:

Yes. I have a chat server installed on my rasberry pi connected to one of my mesh nodes but I ran into problems advertising the service. And identifying a good, easy to use client program for other people to install on their computers was a challenge due to my inexperience in this area. That's why the 'no server needed" approach was attractive. What chat server and clients would you recommend? Perhaps I should revisit that approach.

Gordon, a discovery service for IRC would be rather difficult (not
necessarily impossible) in that the linking of IRC servers into a network
needs to prevent any circular loops of any size. In short, server A
can connect to server B and C but B and C can not then connect together.
I don't know for sure but I suspect that the IRC protocol doesn't have
a way to prevent messages from cycling throughout the network loop
indefinitely.

Just something to consider...

I want to start out by saying a very big THANK YOU to everyone who took the time to offer suggestions, ideas and advice about his project. After reading the various posts it looks like using LAN Messenger is going to be very difficult to get running on a BBHN and waaaayyyyyy beyond my knowledge and skill level at this point. So I decided to try the IRC server approach and I'm happy to report that it works great!

I spent a lot of time on the internet over the past few days and pulled together instructions for getting it all together:

1. I installed an IRC chat server on a Raspberry Pi connected to one of my nodes
2. I setup BBHN on the mesh node that the server is connected to
3. I installed Pidgin as the chat client on my laptop computers. I also installed Google Chrome's CIRC app which also worked.
4. I tried it out between two of my nodes. Success! I was able to send messages to everyone that joined the chat room and I was also able to send private chat messages directly to a single person in the room.

The only downside is that I will need to tell the other stations that plan to use this feature to install their favorite chat client and give them the information about my server. Someone will also have to create a chat room to get started. This should not be a big deal. I think Pidgin will be a good choice to standardize on for our ARES group because-

It's free
There's lots of support for it (tutorials and videos)
There are versions for various operating systems
There's even a portable version that doesn't even need to be installed

I plan to take this portable setup out of the shack and to the field tomorrow for a trial run with a buddy of mine.

Thanks again to everyone that chimed in. What a great hobby this is!

73 y'all

Rusty,
Well of course there would need to be some form of anti-looping in the discovery system beyond the IRC protocol.
A spanning tree algorithm with an anti-looping rule in the discovery protocol could prevent looping and also delivery of duplicate messages to clients if an IRC server's client list could be exposed to the discovery protocol engine.
None of this is simple, or perfect, but if you are willing to exclude servers and clients that might be either loops or redundant, then much good could result. Interestingly enough, duplicate message paths and potential loops could be used to dynamically adjust the connectivity for improved efficiency.
Again, these algorithms are complex and rely on channel bandwidth and application CPU and memory resource monitoring to make for an optimal, and not perfect system.

Ross, you might want to check out my installation tutorial for 'ngircd'
for the WRT54G for answers to some of your concerns. The ngircd.conf
file allows you to create a persistent chat room at startup. Feel free
to email me directly if you have any questions.

Reading material for a slow day.

It all started with this advertisement for the Linksys WRT1900AC:
www.tigerdirect.com/applications/SearchTools/item-details.asp?EdpNo=8992862

What is 802.11AC? So I went to:
http://en.wikipedia.org/wiki/IEEE_802.11ac

A 160 Mhz channel! Wow!

From there I read:
http://www.theruckusroom.net/2010/12/beamforming-in-all-its-glory.html

And here I am with a lowly Linksys WRT54G.

Subject: [tapr-announce] DCC in 3 weeks

The 2014 ARRL/TAPR DCC will be on Friday, September 5th through Sunday, September 7th at the Austin Marriott South in Austin, Texas.

The DCC has two days of technical forums on Friday and Saturday and a concurrent introductory forum on Saturday.

On Saturday night, the banquet will feature an interesting speaker andthe Sunday morning seminar will be "Introduction to SoC FPGA Programming for Mixed Signal Systems" by Chris Testa, KD2BMH.

There will be free tables in the demo room to demonstrate projects and vendors to demonstrate products.

Time is running out, so those interested in attending should register for the DCC and make hotel reservations ASAP.

More DCC information is available at: www.tapr.org/dcc

Date: 2014-08-27 14:34:48 UTC
From: Mark Thompson
Topic: 3024 Message: 3024

For those of you using & innovating HSMM technology in Texas
TAPR encourages you to attend the Digital Communications Conference in Austin on 9/5 - 9/7
and demonstrate & display your technology & projects in the DCC Demonstration room.
DCC Demonstration Room
Each year at the DCC a separate (and lockable) room is provided for people to bring and
show off their latest projects.
Tables and power will be provided.
Bring your equipment and display for all to see, learn, and ask questions about.
Be sure to bring a small sign and/or flyer naming and describing your project.

You can learn more about the DCC at: www.tapr.org/dcc

By the way, TAPR's Business Office is located in Texas in the Dallas area.

Look forward to seeing many of you in Austin!!

DCC Proceedings Abstracts:
33rd ARRL and TAPR Digital Communications Conference
September 5-7, 2014

High-Speed Wireless Networking in the UHF and Microwave Bands
by David Bern, W2LNX and Keith Elkin, KB3TCB
Abstract: This paper discusses building an amateur radio wireless network using commercial off the shelf wireless networking equipment that is currently available. As an example, four Ubiquiti NanoStation M3 3.4 GHz digital radios are used to assemble a demonstration network of two wireless network links that operate on two different frequencies. In conclusion, the paper invites the amateur radio community to build a nationwide highspeed amateur radio wireless backbone network to connect all local amateur radio area community wireless networks.

3027. Plano Balloon Festival

Yahoo group: DAWG-HSMM
Date: 2014-08-31 17:42:05 UTC
From: Kipton Moravec
Topic: 165 Message: 3027

Like other years we will have a MESH system for the Plano Balloon Festival. The Balloon Festival will be Friday September 19, through Sunday September 21.

The weekend before I will get together with the church and get the system operating on the roof of the church.

Thursday night September 18, I will connect up the Communications trailer and the Special Event's trailer.

In addition we will have a WiFi node outside both trailers for hams to connect with their laptops directly. These will NOT be open nodes.

At the communications trailer, the WiFi link it will be for the field operations tent. This is how we did it last year and it had the benefit that there was no setup for us at the field operations.

At the Special Event Trailer the WiFi node will be for experimentation to see if it could help the ramp operator.

If you have any non- 2.4 GHz band MESH equipment using the new SW you want use for this event let me know.

I could use some help on Thursday night starting about 5:30 p.m.

Kip

Hi Kip:

I am working with the PBF Special Event Station, and am planning on bringing my two newly reconfigured mesh nodes for use at the Spec Evt Station. I should be availableThursday evening after. 5:30 PM. Give me a call if you need to coordinate before then .

Kip,
I have been stuck with out of town work and wasn't sure if I could make it out to help setup this year. As it turns out I can assist this Thursday if you still need the help. I have the 3.5Gig radios if you want to go with the same setup as last year and I have a handful of other nodes we can use. Let me know what you need and I will put together what I can.

That would be super. I can not get access to the church on Thursday because Randy my contact will be in Austin. But I will be setting up the Comm Trailer on Thursday night and the Special Event trailer Friday morning. I may be able to get church access Friday morning again. The 2.4 GHz node is already in place.at the church because I knew Randy was going to be out of town.

I am checking my second 24 db node tonight. If it is O.K. I will use that at the Comm Trailer. If it is not working I need plan B.

A 15 db Rootenna is good for the Special Event station. They are much closer.

3035. HamCom for 2015 is moving...

Yahoo group: DAWG-HSMM
Date: 2014-09-23 19:53:31 UTC
From: Rusty Haddock
Topic: 3035 Message: 3035

FYI...

If you haven't seen or heard the news, Hamcom for next year will be at the new Irving Convention Center. The announcement is on the front page of http://hamcom.org. Having to turn away vendors last year and realizing that the 'fest has outgrown the Plano Convention Center are the reasons cited for moving. The dates will be June 12 & 13 (Friday & Saturday).

For those flying into DFW, this will be much closer to either airport with more choices for hotels.

When they left the convention center in Arlington, filling up half the space was quite a task. It's good that it has grown back up in size!

What makes you think the protocols are compatible? Especially with encryption being used in FireChat. :)

What would bother me is that the application "may" want to access your GPS? That's a really GREAT idea for protestors and dissidents using such a network.

3040. Digital Tuesday In Lucas!

Yahoo group: DAWG-HSMM
Date: 2014-10-20 15:44:54 UTC
From: kip@...
Topic: 3040 Message: 3040

We will have Digital Tuesday in Lucas.

One of the items is that the MESH nodes need a server to help share informations.

Rusty will be presenting how to build a Wiki for sharing information on a Raspberry Pi connected to the mesh network.

The same technique can be used for any Linux computer, but the Pi is a lot smaller. Better for deployment.

We will start at 6:30 p.m.
299 Connor Lane,
Lucas, TX, 75002

299 Connor Ln, Allen, TX 75002 - Google Maps https://www.google.com/maps/place/299+Connor+Ln,+Allen,+TX+75002/@33.076409,-96.573174,17z/data=!3m1!4b1!4m2!3m1!1s0x864c055226fd33e7:0xdc8b24067f20d469?hl=en

Subject: Broadband-Hamnet Expands to Include Yet Another Ham Band

Broadband-Hamnet is proud to announce a new firmware release, the most recent in a series of advancements that build on the Ubiquiti firmware released for the 2.4GHz and 5.8 GHz Ham bands earlier this year.

With this BBHN 3.0.0 release, Broadband-Hamnet now includes the Ubiquiti M9-series airMAX devices, giving Hams use of the 900 MHz band for mesh networking.

Among the release’s new features is the ability to easily control the spectrum utilization of the RF links.

Please visit http://www.Broadband-Hamnet.org for more information.

3048. How to flash HSMM on Router running OpenWrt with no GUI

Yahoo group: DAWG-HSMM
Date: 2014-11-25 04:49:52 UTC
From: n2mss@...
Topic: 3048 Message: 3048

Hi,

I have given up trying to figure this out and now asking for assistance.

I successfully flashed a WRT54G V3 with OpenWrt. Since this was done a last year, I do not remember what version of OpenWrt I used. I would like to put BH3.0 on this unit.

There is a command line and everything appears to be working fine. It is my understanding that I need to load up a GUI, this is something I have no idea how to proceed with and instructions I have seen do not get me very far.

Or, are there command line instructions I can issue to manually flash the .BIN file?

Note: I have other routers running OpenWrt, they have a nice GUI and flashing them to HSMM is very straight forward. But these routers already had OpenWrt installed on them. It appears the version I put on it either does not have a GUI or it needs to be executed somehow.

Let me know if I have explained this issue clearly.

Thanks - Hank - N2MSS

Hank,
Did you check for a web interface on port 80 (the normal HTTP port)
after you connected your PC to one of the '54G's LAN ports?

Also, in the directory '/etc' there should be a file named somethign
like openwrt.version or something similar. This or the command 'uname
-a' can tell you what version of OpenWRT you're running.

See if the file '/etc/init.d/httpd' exists in the system. If it does
run this command:

```
/etc/init.d/httpd status
```

If the web server is not running then start it with:

```
/etc/init.d/httpd start
```

This should startup the GUI and allow you to load the BBHN .trx file,
not the .bin.

> Or, are there command line instructions I can issue to manually flash the .BIN file?

IF the GUI was not installed (or was removed after installation)
then copy the BBHN .trx file in /tmp (with 'scp' or 'winscp32' under
Windows) and run the command:

```
mtd write /tmp/*.trx linux
```

and, if successful, run the 'reboot' command. Make sure that /tmp is
a ram filesystem otherwise the .trx file will not get loaded completely.

3050. No December Digital Tuesday meeting

Yahoo group: DAWG-HSMM
Date: 2014-12-14 19:30:05 UTC
From: kip@...
Topic: 3050 Message: 3050

I just got back from 11 days in Germany, and the PARK Christmas party is Monday (6:00 p.m. Furr's on Central in Plano, anyone can attend. Members paid for next year get 1 raffle ticket, and you can purchase tickets! Lots of raffle prizes. Good chance to win -- better than 1 in 10, Lotto can not claim that!)

But there is no time to find anything interesting for Digital Tuesday, and people are busy so close to Christmas.

So no meeting on Tueday!

Kip

3051. Training Net to Test New Digital Messaging Software Using Android Operating system

Yahoo group: DAWG-HSMM
Date: 2015-02-17 20:42:22 UTC
From: Douglas Kilgore
Topic: 3051 Message: 3051

The Dallas NBEMS Learning Net (DNLN) will be operating from the Richardson EOC on Wednesday, Feb18 at 7:30pm. The net will be using FlDigi software suite to send and receive digital messages over the air. One segment of the evening net will test the simplex range of the radios in the EOC.

For users of Android devices (cellphone/tablets), a new app under development called AndFlmsg will be used to send and receive formatted messages over ham radio. This app will allow the ham operator to literally have a portable data messaging terminal in his pocket.

Details about how to obtain and load AndFlmsg to an Android device is described in the fact sheet at:
http://k5rwk.org/rwk01/attachments/article/23/DNLN%20Android%20Instuctions.txt

Ham operators from all over the North Texas area are encouraged to participate.

When: Wed. Feb 18, 7:30 pm
Freq: Check in on 147.12 Mhz repeater - No PL
then change to 145.70 Simplex as directed

I do not understand what you are trying to do either.

I have used it to send pictures during a Bike Rally. One link was 10 miles and the other 5 miles.

I have used it to operate a remote PSK station during Field Day.

So is that a "source of data"?

From: patrick@...
Topic: 3052 Message: 3055

Thanks guys, I'm not clear enough. I'm not talking about either of those.

Here's what I'm saying...

You know how you have a "C" drive? or some external USB drive, say "P" or something.

Ok, when you run any app, such as Quicken, you located the file on the map C drive, such as C:/quicken/ ?

Now, what I'm saying is... do you all know anyone that has used MESH as the "conduit" to create the link, and specialized drive mapping, so that an application can point to it?

Like.. X://Mesh/data and THAT path fully visible by anyone that has created the drive map.

Maybe it's already there...

To help clarify. I'm trying to brainstorm a way to develop a common drive map so that in a disaster scenario the "shared" drive is accessible by certain stations. The data then would be shared.

Make sense?

With MESH the speed should be very good, I'd think.

73,
Patrick KM5L

Linux or windows ?
Each has things that will cause problems with this.
1. Permissions might be stripped off in transit.
2. The flaky connection of the nodes will cause drops which will slow diwn the transfer so bad that it will cause slowness beyond what a database will tolerate.
3. If this is for emergencies then simple doc files and messages are what I would be wanting to see
4. When there are multiple users on the limited bandwidth your speed will suffer so bad that some of the nodes run the risk of resetting or falling off the network.

Just some of the issues you will run into, not to even go to the latency of the computer hosting the files.

Erick

3058. Participate in Sat. Mar. 28 Field Trip to Dallas Makerspace

Yahoo group: DAWG-HSMM
Date: 2015-03-14 06:04:10 UTC
From: Douglas Kilgore
Topic: 3058 Message: 3058

A field trip of interest to ham operators in the North Texas area has been planned to visit the Dallas Makerspace on Saturday morning, Mar. 28. You may have heard the term Makerspace. Here's a chance to see what it is. http://dallasmakerspace.org/

Dallas Makerspace is 501(c)(3) non-profit shared community workshop and laboratory located in Carrollton, TX. Open 24/7 to members, the workshops have various pieces of industrial tools too large and too expensive to have in a home workshop. Classes are also conducted on various topics (ham radio included).

A special Open House for hams has been arranged to show off the various tools available in the Makerspace labs. You'll see the electronics lab, 3-D printing, a laser cutter, a large woodworking and welding shop, a plasma cutter, and whole bunch of other stuff.

Here's the itinerary for the field trip on Saturday morning, Mar. 28:

8:00am Breakfast at Taco Cabana, 18130 Coit Rd, Dallas, TX 75252
(SE corner of Coit and 190) meet and greet

9:30am Dallas Makerspace, 1825 Monetary Lane # 104, Carrollton, TX 75006

11:00am Tanners Electronics, 1100 Valwood Pkwy #100, Carrollton, TX 75006

The Makerspace volunteers that will be hosting us need to know how many are coming.

So, if you are planning to attend, please send an EMAIL with your name, Callsign and phone number to:
Doug Kilgore KD5OUG (kd5oug@...>

My phone is 214-770-2394 Cell

THIS WILL BE A FUN MORNING!
73

Doug

DAWG

A group of us in Parker County would like to set up a virtual tunnel to move llHDE video from three critical intersections in the center of the county to the Ride for the Heroes Race support group in the eastern part of the county. We could use a kick start. If someone could call me at 817 713 9928 I would appreciate it.

Hey everyone, I've got my Router working, but just on the routers built in antennas. So basically I've not been able to do a darn thing with it :(

Can someone recommend an inexpensive way to put the router up in the air and recommend a low cost antenna? Even possibly someone to "shoot" at?

Thanks and 73,
Patrick KM5L

I have successfully used some 2.4ghz yagis from eBay. They were cheap in every sense of the word but they worked. I seriously doubt their gain claims but they suffice. I’ve also used verticals, both home-built and purchased. Plans are available on the ‘net.

For field day use and for testing, I have put the antennas on a painter pole and/or a push-up pole with the router down toward the base. This is a bit lossy though. I’ve also put the router up on a mast, close to the antennas. I like to use a yagi and an omnidirectional together.

Bill

So since I'm using the Linksys with two antennae, how does that work? Do I need two of these or what?

I suppose then I need a cheap TV rotator or just armstrong it for now...

I'm not good in these bands, but it seems to me there is no use in power dividing the signal, especially in the same direction. When using the internal antennae, I would assume they are spaced in a phased relationship. But with the yagi's that would not be the case. It seems like it would be better to shut one down in software when using the yagi. What am I missing?

Broadband-Hamnet Issues New Release of Firmware for Linksys and Ubiquiti
Broadband-Hamnet (BBHN) has released version 3.1.0 firmware for the Linksys WRT54G and Ubiquiti families of products. This firmware returns to the use of patch updates, while also supporting add-on tools such as HamChat created by VE3NKL and a tunneling solution optimized by K5DLQ. This firmware release continues support for emergency communications data networking in the 2.4 GHz, 5 GHz and 900 MHz bands using Ubiquiti equipment and in the 2.4 GHz band using Linksys equipment. By creating solutions with Commercial Off The Shelf (COTS) hardware and Broadband-Hamnet firmware, a high-speed IP network can be deployed in the time required to set it in place and power it on.
There have been many requests for tunneling capability to allow interaction between remote Broadband-Hamnet networks. While this has been done before, the resources and complexity were quite high. With the new VTUN capability this feature becomes feasible for all Broadband-Hamnet users.
The HamChat server is a real innovation that allows keyboard-to-keyboard chats between any connected users on the same mesh. By using your web browser instead of chat client software, the complexity is reduced and the speed to deploy is increased. The HamChat server is not installed but is a downloadable package option for the Broadband-Hamnet 3.1.0 firmware.
The organization hopes that hams interested in high-speed data networks will look at the new Broadband-Hamnet 3.1.0 firmware. For more information, click on the group's website:

Hi Doug,
Please send out this information for me.
I have a used Rohn BX tower for sale.
I am asking $250.00 and it comes with a new set of concrete base mounting legs and a used thrust bearing.
It is seven 8 foot sections of tower that make up a 54 foot self supporting tower.
The tower is on the back of my pick up truck now and I will deliver it free to the immediate area.
My phone number is 214-244-9506.
Thanks,
Bob Coelln

I doubt it but... It appears to be useful only for text messaging.
Wonder if they're using 1200/2400-baud FSK and their own packet structure?

>And it uses encryption.

Makes sense. T'would be nice if it could be tweaked for <148-MHz
and encryption turned off. Still, $149 for two very specialized
radios (and that's the Pre-order price) is a bit much.

You could easily do that with the ZipIt Z2 but over regular WiFi. :)

From: Thomas Wright <TOM.WRIGHT@...>
To: kd5oug@... <kd5oug@...>

HI Doug

Let me introduce myself, my name is Tom Wright, (NN2X), *residing in Allen Texas*. I am the co-founder of ITC-L (IT Vocational School), which focuses on IT industry. ITC-L is a licensed Vocation School, based in North Dallas Texas, (Richardson). Web Page WWW.ITC-L.COM <http://WWW.ITC-L.COM>

Our toll free number is : 855-482-6779 or you can call me directly at 972 322 8082.

We are targeting *Ham Operators* to enroll in our Network Associate Engineering Program (Richardson Texas)! The Network Associate Engineering Program is only 12 weeks, 4 hours a day, M-F. We start Sept 1, through Nov 20th .

Why are we targeting Ham Operators?

The *State of Texas mandates ITC-L to place very percentage of the students*. Ham Operators with IT Skills enhances dramatically the success of placement! Unlike Colleges and Seminars courses they are not mandated to place the students from the State of Texas, but ITC-L is required hence ITC-L will only accept 25 students!

Below is more about ITC-L

/Seeking Ham Operators to be placed in IT Industry/

/(In Dallas Texas) /

As a Ham Operator, we have a thirst for technology. Many of us (Ham Operators) converted the Ham experience into a career in Telecommunications.

Unfortunately, various Telecom skills are fading away, and so are companies (Like Nortel).

Today it is all about IT technology and many X Telecom Engineers are faced to retool, and the natural progression is in IT industry

ITC-L is local licensed Vocational school in the State of Texas, and we are expanding to a new building in Richardson, Texas, 75002. Our *programs are only 12 weeks*, 4 hours a day, *and the State of Texas, mandates we place HIGH percentage of our students*..

ITC-L are specifically targeting Ham Operators. ITC-L will only accept 25 Students We believe a technologist (Ham operator) has the background and will be easier to place in the IT Industry.

ITC-L is local, (Richardson or Allen Texas), our classes start in Sept 1, and completes Nov 20, 2015.

The IT certificates that you will obtain, are A+, N+, MCP (Microsoft), and CCNA (Cisco),

Unlike college or Seminars there is no mandate to place the Student, we (ITC-L) is mandated by the State of Texas, hence we are only enrolling what we can place! (Only 25 students)

Many of you may recall the First Class FCC license, during those days the salaries for FCC First class was in par with a BSEE.

The same is today, however it is the IT certificates that pay better than even the BSEE, or MBA, as shown on the table to the left.

There are 477 Cisco Channel partners alone in the Dallas area, and 100+ Microsoft channel Partners. The demand is overwhelming

Look forward to your response

Best, 73?s DE NN2X!

3080. Plano Balloon Festival

Yahoo group: DAWG-HSMM
Date: 2015-07-30 01:52:10 UTC
From: Kipton Moravec
Topic: 165 Message: 3080

Plano Balloon Festival is around the corner again. This year it will be September 18-20.

It looks like we will be providing internet access from the church to the Communications trailer and to the Operations Tent. In addition we will provide the Special Event Trailer with internet access.

The church will be a much easier setup than in previous years as last year Randy installed an Ethernet port next to the roof hatch last year which simplifies our Internet access to the roof. So I can run a 200 foot Ethernet cable from there to the Ubiquity nodes and we are good.

Last year we used both 3.4 GHz and 2.4 GHz and it seemed both worked well. (3.4 worked better.)

Tony purchased a pair of 900 MHz units this year for Field Day, and we may try those also at PBF.

We will probably set up the church a week early, and then everything else Thursday after work.

If you want to help let me know.

Kip

3082. WARNING about newly produced Ubiquiti gear

Yahoo group: DAWG-HSMM
Date: 2015-09-22 19:56:25 UTC
From: Rusty Haddock
Topic: 3082 Message: 3082

This is on the BBHN website front page. Take heed!

In short -- Ubiquiti is using a new version of their bootloader (this is the code in the device that loads new firmware) that has moved the locations of and changed the sizes of certain sections of flash memory. Loading non-Ubiquiti firmware into a newly manufactured (roughly from July 2015) *WILL* brick your unit. Be warned!!! See the link below.

-Rusty-

Broadband-Hamnet
NEWSFLASH
Written by Administrator
Monday, 07 July 2014 00:00
9/21/2015

Notice: There is a serious risk to certain Ubiquiti hardware when used with software not written to match their new boot loader. The issue occurs when recent Ubiquiti devices with a new bootloader version are used with firmware not specifically modified for this change.

OpenWRT is the origin software for Broadband-Hamnet software designed for Ubiquiti products.

At present, the issue is under investigation.

To prevent unrecoverable damage to your Ubiquiti devices, we STRONGLY recommend waiting until the limits, methods to avoid the risk and specific steps are posted.

Further details of the actual issue are here:
http://wiki.openwrt.org/toh/ubiquiti/airmaxm

Sorry -- I should have said: *SOME* newly manufactured units.
This doesn't necessarily pertain to all Ubiquiti gear.
Again, see the article on the OpenWrt wiki.

3084. Fwd: [UKHAS] Pegasus II - Go for launch Oct 5

Yahoo group: DAWG-HSMM
Date: 2015-10-01 05:39:02 UTC
From: Douglas Kilgore
Topic: 3084 Message: 3084

Microsoft is doing a balloon launch next week.

-------- Original Message --------
Subject: [UKHAS] Pegasus II - Go for launch Oct 5
Date: 2015-09-29 08:17
From: Matt Long <w.matt.long@...>
To: UKHAS <ukhas@...>
Reply-To: ukhas@...

The Pegasus Mission will launch Pegasus II from Cheyenne, WY on Oct 5, 2015, using experimental technology to deliver a live near space experience.

Features:
-Live video
-Live telemetry
-Live updating maps of craft, chase vehicle, launch site
-User messages sent to inflight craft from mobile apps
-Craft can send text messages during flight for launch notification.
-Remote Intelligence to manage flight operations, video rotation, cut-down, and low altitude parachute deployment

Web Site: https://www.pegasusmission.io
Sign up for SMS Flight notifications and craft will text your phone when we launch.

Web Site will display live video, telemetry, maps.
Mobile apps will be available. Search your app store for "Pegasus Mission".

Flight Name: Pegasus II
Location: Cheyenne, WY 41.122910,-104.895172
Balloon: Kaymont 2000gm
Target Altitude: 100,000 ft
Call Sign: KD9CVO-2

3087. Using Mesh to Link Repeaters

Yahoo group: DAWG-HSMM
Date: 2015-11-12 23:35:53 UTC
From: Fred Kleber
Topic: 3087 Message: 3087

Hi List,
I've searched all of the forums and haven't come across anyone commenting on this topic. What I seek is info from someone who has successfully linked two analog ham repeaters. I understand that BBHN only moves data, so an external status / supervisory / contact closure type application would be needed, in addition to passing audio in both directions.
Any help folks can provide is much appreciated. 73,Fred, K9VV / NP2X

one problem your going to have is delay from one repeater to the other. There is processor overhead you must overcome I look forward to helping you test this out, but I am very worried that this is going to perform like a voip connection with a bad linc.

3089. Re: [DAWG-HSMM] Using Mesh to Link Repeaters

Yahoo group: DAWG-HSMM
Date: 2015-11-15 15:43:36 UTC
From: David McAnally
Topic: 3087 Message: 3089

A duplex radio (RF) link setup would seem preferable. I started to write about theLinkbox, below, but discovered a CAT repeater controller <https://catauto.com/index.php/2014-12-29-23-38-29/internet-linking/cl-100-internet-controller>
supporting linking across networks. It would seem the controller network feature would be the way to do mesh network repeater linking.

However, it should be possible to use something like theLinkbox <http://sourceforge.net/projects/cqinet/>to link repeaters "off grid" via a mesh IP network. There will be a learning curve. Skip, WB6YMH, the author seems to have moved on to other interests. There is a Yahoo group <https://groups.yahoo.com/neo/groups/thelinkbox/info> where you "may" find limited support for theLinkbox.

I use Skip's earlier software, theBridge <http://cqinet.sourceforge.net/thebridge.shtml>, for combined IRLP and EchoLink conferences/reflectors, supporting WX5FWD SKYWARN <http://wx5fwd.org/> activities. Skip later came out with theLinkbox, based on theBridge, to provide direct control and linking of repeaters or radios over IP, as well as conferencing capabilities of theBridge. I also have had theLinkbox running as an IRLP/EchoLink conference <http://status.wx5fwd.net/>, for several years now. I never got around to interfacing it directly with a radio. I know others have done so. It should compile on most Linux/UX related systems, including the RaspberryPI. There was discussion of replacing theBridge in EchoIRLP with theLinkbox.

There may be other software packages for IP linking of radios. I'm only familiar with theLinkbox. An important aspect is that the software must be something that can run stand alone, without needing to interface with public networked systems and IRLP, EchoLink, D-Star, etc.

Good luck with your project!

| Build a High Speed Amateur Radio Microwave Network

Using commercial off-the-shelf equipment and developing their own software, groups of hams have created high speed wireless Amateur Radio digital networks with wide area coverage.

The possible uses for these high speed data networks in the Amateur Radio community are endless. Virtually any service that works on the regular Internet can be adapted to an Amateur Radio high speed multimedia (HSMM) network, including video conferencing, instant messaging, voice over Internet protocol (VoIP), network sensors and cameras, remote station control, and many other services. With the capability to send real-time video and data files, the public service and disaster support aspects of Amateur Radio are expanded tremendously.

This book introduces HSMM networking, explains the basics of how it works, and describes the various technologies in use today. Later chapters explain in detail how to deploy your own HSMM network, along with various applications to put it to work. Well illustrated step-by-step instructions will guide you through the process of installing and configuring software needed to get your HSMM network up and running.

From: mbpruden@...
Topic: 3093 Message: 3093

We still have a few seats available if you know anyone who might be interested.

Mike
NN5ZZ

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on June 18th-19th, 2016. The class will be held at the Lucas Fire Station, which is located at 165 Country Club Ln, (just north of Bethany/Lucas Rd.) in Lucas. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 3:00pm on Saturday and 9:00am- 2:00pm on Sunday, with the EXAM at 3:00 on Sunday. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).

Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class, and read through the course material at least once. We have a number of used study guides available, which you can rent for $14.00 cash. When you return these study guides, in good condition (not marked up or dog ear'ed), your $14.00 rental fee will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

Any additional questions that you might still have after reading through the study guide, will be covered during the two day training class. If you want your own copy of the study guide, these manuals are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@arrl.net). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Let us know if you are interested in renting one of our used study guides, and we will contact you regarding how to pick up your copy.

Thanks
Mike Pruden

3100. Presentation on High Speed Mesh Networking with AREDN

Yahoo group: DAWG-HSMM
Date: 2016-07-10 22:54:56 UTC
From: Douglas Kilgore
Topic: 3100 Message: 3100

There is now a special presentation scheduled for the afternoon session of the Raspberry Pi SIG.

Please join us on Saturday, July, 16, 1200-1500 at University of Texas at Dallas, for a presentation on, and demonstration of, high speed MESH networking using the K5UTD Amateur Radio Emergency Digital Network (AREDN) project. Given by Andrew, KE5GDB, the presentation will will include assistance with node setup (hardware, software, firmware) and operation.

AREDN is an adaptation of Broadband-Hamnet firmware to Ubiquity wireless products on the 900Mhz, 2.4, 3.3 and 5 Ghz amateur bands. AREDN has the potential to provide extraordinary digital communication capabilities for RACES/ARES and public service operations.

Whether you are just curious about AREDN or are already mesh-ready, this presentation will be an excellent opportunity for learning and sharing. If you have node gear (radio, antenna, laptop, etc.), please bring it.

For meeting location, visit http://brandenburgtech.com/

3101. Re: [DAWG-HSMM] DFW mesh with 3.4 GHz?

Yahoo group: DAWG-HSMM
Date: 2016-07-11 02:49:15 UTC
From: Kipton Moravec
Topic: 3095 Message: 3101

I disagree.

Currently the only thing AREDN does that Broadband-Hamnet does not yet do is adds frequencies below Channel 1 on 2.4 GHz.

ARDEN updates are frequent. They update more often because they are fixing things that are broken or never worked.

Currently ARDEN and Broadband-Hamnet are over the air compatible, but ARDEN is not promising to stay that way. The networks with Broadband-hamnet are up and running and STABLE. (If it is not broken, do not fix it...)

ARDEN does not support Linksys routers. Broadband-hamnet does and will continue to.

Broadband-Hamnet is developing capabilities for the Raspberry Pi. ARDEN is not interested in the Raspberry Pi either.

But do what you want...

Kip

Thanks Gordan, and also Erik.

Gordan ok on that info, I'll check it out. Erik I'm in Lakewood and I do understand the need for line of site, but that's the same even for 2.4 pretty much right?

I don't know, I've got a 2.4 now going and want to get it up high on a pole - but before going to the trouble I'd like to decide on the band. It's my understanding that 3.4 GHz would be better for amateurs since it's not shared with the masses. Is this good thinking? I'd like to find 2, 3 or 4 hams nearby in the Lakewood area who would like to link up on 3.4 GHz.

73,

Hey Kip, thanks for that input. I'm zero authority on any of this, but want to add to it if I can. I would think that we should be trying to go down the same path though, too much splintering could hold up proliferation and I'd love to see mesh proliferate. In all honesty, should we think of the linksys router as a true consideration since (correct me if I'm wrong) those routers will eventually break down and nothing new in that line is replacing them? Again no authority here but aren't these the old ones and once gone are gone?

Shouldn't we opt for frequencies that are not shared with the public? Just asking, not saying.

I loved your raspberry pi comment too, I'll look up what y'all are doing on that as I have several pi projects as well.

73,
Patrick

blockquote, div.yahoo_quoted { margin-left: 0 !important; border-left:1px #715FFA solid !important; padding-left:1ex !important; background-color:white !important; } Actually linksys still makes millions of wrt54gl every year. And they'll be replaced by other linux-capable routers with broadcom chipsets. If not broadcom, i imagine there will be more linux capable routers on the future and it will be a matter of getting the correct drivers.

The problem with the Linksys routers is their limited memory. It isn't possible to host some of the applications on a Linksys that are available to run on the MESH network. Also, since they are single polarization instead of dual, they aren't as efficient as the Ubiquiti hardware.,

The Ubiquiti Nano station has come down pretty far in price. You can get one for about $80 on Amazon, and this unit has dual-polarization and a 90 degree sector antenna built-in. It is also small and light-weight, making it easier to deploy to a higher elevation because it needs less guying and doesn't catch as much wind.

My experience, although probably not as great as some of you, is that using the aREDN firmware on channel -2 has greatly increased throughput, bandwidth, and speed. Distances that aren't available on the main channels, due to their being shared with public WiFi, become tangible when moving down into the ham-only band with channels -1 and -2. There are a couple of clubs in the Tarrant County area that have switched to AREDN and increased the reliability of their MESH network greatly.

The "loss" of ability to use Linksys routers, which don't perform as well as Ubiquiti anyway, is small-potatoes to the advantages gained by using the channels below public WiFi. But as one person said earlier, this only applies to the 2.4GHz band. the 3GHz and 5.8GHz band is available to both AREDN and BBHN.

Patrick,

On the WWW.AREDN.ORG web site you will see that there is a test program to make sure what type of device you have (XM or XW) and whether it is running 5.5 or 5.6 Ubiquiti code. You should run that first to make sure you know what you have. Either way if it is 5.6, then you will need to load the appropriate (XM or XW) 5.5 code BEFORE loading the AREDN code.

There is something in the 5.6 Ubiquiti code that makes direct upgrades from 5.6 not work, so downgrading to 5.5 fixes that issue.

In any case, the AREDN mesh code is pretty awesome with built in tunneling and other routing and gateway features.

Feel free to give me a call or drop me another email if you get stuck or have a question.

Jason,

Keep in mind that AREDN also supports 900 MHZ which is golden for linking when higher bands aren't cutting it.

Thanks Gordon, I've not tried the 900MHz band yet for MESH. Ubiquiti has had radios for this band for a long time, and I thought I remembered BBHN supporting those at 1 time, but I might be mistaken on that front.

For those interested in AREDN, I recorded the presentation at HamCom this year. It is posted to be YouTube series and you can find it here:

Jason,

Yes, Ubiquiti has 900 MHz radios that are worthy of use.

Frankly with all the fixes and enhancements available with AREDN, I don’t know why anyone with Ubiquiti gear would consider using BBHN software. If it is a matter of interoperability, then you simply put your Linksys boxes up with an SSID that matches the AREDN nodes operating on the same channel OR you can use a DtD hardware link.

So what’s the attraction for BBHN? Is there anything they do that is desirable and unavailable with an AREDN node?

Proliferate, in what form? What would the ideal "mesh" look like to you?

My idea of "proliferate" would be to create a well-refined mesh hardware/software package that hams can easily deploy inexpensively and becomes a ubiquitous wireless networking solution for ham activities. More along the lines of a solution used when a bunch of hams do an activity together as opposed to a geographically wide area over the air network. Something as ubiquitous as an FM HT you bring along to an activity and just "works" with others when you turn it on, and isn't a significant hardware investment.

BBHN runs on a Linksys router. That makes the adoption inexpensive for most hams and works well enough for applications hams would typically do.

You can of course use AREDN for local mesh networks just fine, and I believe at some level they will even work interoperably with BBHN (w/same SSID). But the beauty of BBHN is you can run it on cheap hardware, AREDN can't. I see a whole lot more utility in that for most amateurs in the form of creating an inexpensive throw-down network at Field Day, a public service event or group activity. With the limitations of a Linksys this mesh can only extend so far geographically, but go much beyond that and it's difficult to be a mesh anymore anyway - it becomes point to point which is better served with commercial hardware running OEM software. BBHN is good enough for hobby purposes at a hobby level of investment. Ham radio *is* a hobby. Not every ham interested in trying mesh wants to spend over $100 for a couple of nanostations to load AREDN, and not every ham using mesh wants to become a ham ISP, deploy nodes and support systems in the field. The Linksys is the perfect lowest common denominator platform that "average" hams can acquire, play with and use effectively for a local mesh network. To me this is the "bread and butter" of ham mesh networking, contrasted to AREDN's ham radio ISP mission.

Mark,

I agree with the inherent need for frugality, but we're quibbling over a few dollars vs. A WHOLE BUNCH OF BENEFITS WITH AREDN SOFTWARE.

I guess for indoor applications the Linksys WRT-54GL at $43 on Amazon is OK, but keep in mind that the Ubiquiti M2 Loco is $49 from them and gives you a better receiver, higher power, better AREDN-based features and a weatherproof housing. THAT'S $6! :-)

You can use any old and likely free home router with its DHCP off as an inside unit for ports and as a Wi-Fi access point for your home or shack if you need. That's a better use for any old router in a mesh network and that's where they end up in my AREDN field deployments.

While the mission of the AREDN program is to create a stable alternative to the public Internet and public safety intranets, we have at our disposal better software on better hardware. We create fixed and mobile networks for all kinds of events about 20 or more times a year running video, telephones, web and message services for periods ranging from half a day up to a week. We get the need to have lots of cheap connectivity and we also like the performance and reliability of modern hardware coupled with solid, tested software. Conrad and the rest of the AREDN team fixed and tested a bunch of stuff that is in the last Linksys version, but the state of the code has progressed both in reliability and in features since the AREDN team stopped support for the Linksys gear. While it will interoperable on channels 1-11 @ 20 MHZ BW, the newer Ubiquiti code is more reliable, and can be used on quieter non-Wi-Fi channels and/or with non-standard bandwidths which improves performance. Further, there is both performance and security improvements with the use of 5 or 10 MHZ BW as most home network tools won't see those nodes.

One last point, undiscounted on Amazon you can find the M2 Nanostation for $78, not $100.

Give this Ubiquiti and AREDN stuff a fresh look and I think you will be pleased.

Hey Mark,

Yes I agree with that pretty much. I will say though I'm thinking that standardization is best in something like this, and if AREDN can provide a lot more features at close to the same cost then I'd have to lean that way - but I'm still a newbie on this stuff.

Not so much a newbie however on I.T. related areas - or my 40 years in ham radio (dang I'm old). To your question what should a mesh look like to me? I'd say a cluster of clients living nearby and using a gateway to connect to other clusters and apps hosted on backbone facilities - I'd think the gateway would be on some tall building, or someone's tall tower. I'd challenge everyone to make that part of their station 100% solar, or at least a small genset ready to go, and an automatic transfer switch activated from the GPIO pins of a $5 raspberry pi (lol, you asked). Would then love to see some cool emcom apps and also fun ham apps.

73,
Patrick KM5L

Ideally, I agree. But realistically that's impossible. There isn't enough amateur population density to support "blanketing" a coverage area like that. So the prevailing solution is narrow beamwidth links and tunneling. That's not mesh, and it's not easy.

> - I'd think the gateway would be on some tall building,

If you put an omni node where it has a wide visibility, you suffer from hidden terminal. Mesh in ham context only works in small simple networks. Too many nodes/too much coverage and mesh will fall in on itself.

> I'd challenge everyone to make that part of their station 100% solar,

My node was up for the better part of a year. Nary a single connect not counting myself.

> Would then love to see some cool emcom apps and also
> fun ham apps.

It does need some "killer apps" to inspire greater adoption. IP phones and cameras are pretty useful and the chat application I saw demo'd at Hamcom last month looked interesting. Hams aren't so much interested in networking but when it gives them a program or function that they really like or need, then the end justifies the means. Having that connectivity reduced to a plug and play box at a nominal cost makes the Linksys solution an easier option to sell.

Just my experience so far.

On that point, my average investment into a linksys is about $10. Yes, used. There's millions of them out there and easy to find. That's a couple happy meals. Most hams have no issue coming up with that.

> undiscounted on Amazon you can find the M2
> Nanostation for $78, not $100.

Right, but you need two to tango. Chances are slim to none any given ham lives close enough to connect to anyone else. You can't do anything with just one.

> we have at our disposal better software on better hardware.

I agree with that. But at a much higher cost. I'm dying on that hill. Mesh is such a specialized application I know a *lot* of hams have no interest in buying two or more M2's (or other more expensive bands/versions) just to set up a simple local network. But at ~$10 a pop for a Linksys, that's easy. I've done enough demo's at conventions and hamfests to learn this firsthand. The Linksys solution gets all the attention. Network geeks/hams on a mission would have no problem investing hundreds into better performing hardware but that's not the greater demographic among hams. My perspective is to promote adoption of a basic networking tool. When you start talking backbones, multiple bands, tunneling, et al you're way past "mesh" and well into custom networking. That's not most hams. As a "when all else fails" tool it's a niche within a niche (emcomm/ham ISP) and frankly done better with commercial solutions.

Patrick,You have just said word for wordhow I've proposed that we build out MESH here in Austin... Simply ahand full of folks find a tall site and link to it, could be a water tower,radio tower, church, hospital... Create a cluster of hams and as the wordgets out an more want to play another group could copy it... The trick is toget the first group to document how they did it and what they learned along theway... I don't want to make the same mistakes 345 others have... Iwant to make new mistakes... By the time youhave 3-4-5 clusters they can start to look for ways to link them using someUbquiti gear to build a high speed backbone... IMHO the backbone shouldbe on the commercial channels where the admins can password block and controlthe network... The MESH (Ham Radio data) just rides on thebackbone... Some don't like my plan because it would use commercial gearon commercial channels and that's not Ham Radio... OK, but it is still radioand and it has Ham Radio hanging on at both ends kinda like IRLP... Theswitch to a password controlled backbone doesn't have to be done on dayone... It could be done later right after the network gets hacked andsomebody causes the backbone to crash... The other half just hate my namefor it; Amateur Radio MicrowaveProject Interconnecting Tall Structures, ARMPITS...
But that's justwhat you described... I simply gave it a name close to a year ago and I'm the only one that seems to like it...
 Here in Austin and thesurrounding counties we have 30+ hospitals, EOCs, Fire Dept's, Police Stationswhere we have 2 or more dual band radios, PCs, TNCs running 1200 baud packet tosend email via Winlink... We have access to most of the roofs to doantenna maintenance... Build clusters, link clusters viaa backbone, build more clusters, link more clusters via a back bone... Wash, rinse, repeat...
If the backbone is a secure network that commercial "encrypted" traffic could be sent over then the ARES served agencies like hospitals, police, fire, ems, red cross etc could use it to hop over internet outage... All the MESH traffic gets a free ride on the backbone...
IMHO having a commercial RADIO link (built and maintained by Hams) in the middle of a MESH Ham sandwich is more ham radio than using tunnel hardware and the Internet to link clusters of nodes...

I guess the third thing is they don't like is me calling it a Ham sandwich...

Proliferate, in what form? What would the ideal "mesh" look like to you?

My idea of "proliferate" would be to create a well-refined mesh hardware/software package that hams can easily deploy inexpensively and becomes a ubiquitous wireless networking solution for ham activities. More along the lines of a solution used when a bunch of hams do an activity together as opposed to a geographically wide area over the air network. Something as ubiquitous as an FM HT you bring along to an activity and just "works" with others when you turn it on, and isn't a significant hardware investment.

Well Mark, there is no question that used WRT-54G's can be had for a lower price. Here in the northeast they typically go for $20-30, but that's the reality of the northeast. If you want a WRT-54GS then you are in the $40-60 range because of demand by non- ham DD-WRT, Mesh Potato, etc. users. To me that really makes no sense.

I think the role of the Linksys boxes is as I've described previously or as Jim Kinter, K5KTF observed that they are good for table top learning.

As you noted, you aren't going to create much in the way of an emergency network between sites with Linksys boxes when all else fails. Weatherproofing, amplifying and all the support stuff is expensive for a Linksys compared to a Ubiquiti. I know this, as I have built several Linksys nodes and have gradually replaced for significantly less money except for a Rocketdish that I picked up from Randy, WU2S when I had a fit of annoyance over the poor quality of one link! :-)

In my everyday mobile I use an M2 Nanostation. It costs a little more than a Boafeng, which is clearly ham-frugal. It's biggest environmental challenge are the bugs shmooshed on the white front. :-) I will either paint it, or replace it with an M2 Rocket with painted antennas. That will give me an omni pattern, so the idea is attractive. I'll send a photo later if photos can be posted here.

Hey Dallas, sounds good, I do think we're thinking along the same lines, hub and spoke, connect the hubs with backbones. Curious about your comment that hams don't like using commercial gear, what's an example of that comment? You mean commercial gear that was not initially intended for ham use? Otherwise, anything we use that's not homebrew is commercial, even if built for the ham community. Kudos to hams for exercising innovation. That's what makes the world spin, innovation - that's what pi is all about, for sure.

On the other hand, I am also understanding why Mark is saying what he's saying. He's living in a not so dense area, just flat not enough density in intertest maybe to do hub and spoke. So maybe there has to be more than one approach to accommodate most scenarios.

Mark, on the tunneling, are you talking about tunneling/backhauling ham traffic via internet? Wasn't clear on that point.

Patrick,By commercial gear on commercial frequencies, I'm talking about Ubquiti gear using stock software using Part 15 regs or using Ubquiti gear on 3.65 where you have to get a license but I understand the FCC is not issuing those and has put a freeze on them...

Said another way any freq/channel that we as citizens could encrypt but as hams we are not allowed...

Dallas,

You could always put them in the 3.4 GHz Ham band and obtain the benefits of a quieter band and avoid the commercial licensing issues.

Subject: Re: [DAWG-HSMM] DFW mesh with 3.4 GHz?

Patrick,

By commercial gear on commercial frequencies, I'm talking about Ubquiti gear using stock software using Part 15 regs or using Ubquiti gear on 3.65 where you have to get a license but I understand the FCC is not issuing those and has put a freeze on them...

Said another way any freq/channel that we as citizens could encrypt but as hams we are not allowed...

Hey Dallas, sounds good, I do think we're thinking along the same lines, hub and spoke, connect the hubs with backbones. Curious about your comment that hams don't like using commercial gear, what's an example of that comment? You mean commercial gear that was not initially intended for ham use? Otherwise, anything we use that's not homebrew is commercial, even if built for the ham community. Kudos to hams for exercising innovation. That's what makes the world spin, innovation - that's what pi is all about, for sure.

On the other hand, I am also understanding why Mark is saying what he's saying. He's living in a not so dense area, just flat not enough density in intertest maybe to do hub and spoke. So maybe there has to be more than one approach to accommodate most scenarios.

Mark, on the tunneling, are you talking about tunneling/backhauling ham traffic via internet? Wasn't clear on that point.

Linksys routers are cheap, but they don't perform as well as Ubiquiti. So liken it to - do you own a Baofeng HT? Is it your only HT, or do you also have an Icom or Yaesu at $250-$350.each for a 5-watt HT? Why spend that kind of money when you can get a Baofeng for $35?

Quality. That is why.

The Ubiquiti is made for outdoor use, and the Nano and Rocket stations are dual-polarization, making for a better connection. Even when I had BBHN firmware running on all my nodes, I was still using Ubiquiti an seeing drastic improvements in performance. So, to me, using the Linksys stuff doesn't help the network anyway. I can see the advantages of getting people involved, but by the time you spend the extra money on an outdoor enclosure, external antennas and cabling, and everything you would need to mount the node outside so that it could see other nodes, you are up to much more than the $10 you paid for your used router.

Dallas,

I've been a fan of mesh networks and in AREDN in particular. I was a member of the development team but family health issues got me off the team. I still think that the guys are the best focused on getting good quality software into the field, no matter your thoughts about their mission. Their stuff works in a wide variety of applications and situations and they are managing to address issues in a rational manner while also growing the feature set in a methodical manner. Kudos to them!

We have an issue with site access here in northern New Jersey because of tiny towns with strong home rule and a lack of collaboration, small hills that block 2 mile paths, and commercial site access that requires real money to use. No one does things for the public good because of either risk aversion or money. We are making some political progress, but it will take time to align the planets. In the meantime we have islands of nodes in some communities, some of which are tunneled, but most are not.

I confuse people by using my middle name, "Gordon". Actually, my Dad was "James Gordon" and he was called "Gordon" by his parents as well, so we can blame them. When my wife and I had our first son, we named him "James Gordon" as well, but my wife didn't want to deal with three "Gordons". Now he doesn't get to use his middle name to filter out telemarketers like my Dad and I did/do. :)

(Sorry if this gets posted twice... Yahoo mail froze so I sent it a 2nd time)

Patrick,

You have just said word for word how I've proposed that we build out MESH here in Austin...

Simply a hand full of folks find a tall site and link to it, could be a water tower, radio tower, church, hospital... Create a cluster of hams and as the word gets out an more want to play another group could copy it... The trick is to get the first group to document how they did it and what they learned along the way... I don't want to make the same mistakes 345 others have... I want to make new mistakes...

By the time you have 3-4-5 clusters they can start to look for ways to link them using some Ubquiti gear to build a high speed backbone... IMHO the backbone should be on the commercial channels where the admins can password block and control the network... The MESH (Ham Radio data) just rides on the backbone... Some don't like my plan because it would use commercial gear on commercial channels and that's not Ham Radio... OK, but it is still radio and and it has Ham Radio hanging on at both ends kinda like IRLP... The switch to a password controlled backbone doesn't have to be done on day one... It could be done later right after the network gets hacked and somebody causes the backbone to crash...

The other half just hate my name for it; Amateur Radio Microwave Project Interconnecting Tall Structures, ARMPITS... But that's just what you described... I simply gave it a name close to a year ago and I'm the only one that seems to like it...

Here in Austin and the surrounding counties we have 30+ hospitals, EOCs, Fire Dept's, Police Stations where we have 2 or more dual band radios, PCs, TNCs running 1200 baud packet to send email via Winlink... We have access to most of the roofs to do antenna maintenance...

Build clusters, link clusters via a backbone, build more clusters, link more clusters via a back bone... Wash, rinse, repeat...

If the backbone is a secure network that commercial "encrypted" traffic could be sent over then the ARES served agencies like hospitals, police, fire, ems, red cross etc could use it to hop over internet outage... All the MESH traffic gets a free ride on the backbone...

IMHO having a commercial RADIO link (built and maintained by Hams) in the middle of a MESH Ham sandwich is more ham radio than using tunnel hardware and the Internet to link clusters of nodes...

I guess the third thing is they don't like is me calling it a Ham sandwich...

(Sorry if this gets posted twice... Yahoo mail froze so I sent it a 2nd time)

Hey Mark,

Yes I agree with that pretty much. I will say though I'm thinking that standardization is best in something like this, and if AREDN can provide a lot more features at close to the same cost then I'd have to lean that way - but I'm still a newbie on this stuff.

Not so much a newbie however on I.T. related areas - or my 40 years in ham radio (dang I'm old). To your question what should a mesh look like to me? I'd say a cluster of clients living nearby and using a gateway to connect to other clusters and apps hosted on backbone facilities - I'd think the gateway would be on some tall building, or someone's tall tower. I'd challenge everyone to make that part of their station 100% solar, or at least a small genset ready to go, and an automatic transfer switch activated from the GPIO pins of a $5 raspberry pi (lol, you asked). Would then love to see some cool emcom apps and also fun ham apps.

Proliferate, in what form? What would the ideal "mesh" look like to you?

My idea of "proliferate" would be to create a well-refined mesh hardware/software package that hams can easily deploy inexpensively and becomes a ubiquitous wireless networking solution for ham activities. More along the lines of a solution used when a bunch of hams do an activity together as opposed to a geographically wide area over the air network. Something as ubiquitous as an FM HT you bring along to an activity and just "works" with others when you turn it on, and isn't a significant hardware investment.

Then don't put an omni node on a tall site. It will hear everything but the nodes connecting to it can't, so there will be so many collisions nothing will get through. This is known as hidden terminal.

Additionally, and this is a point it seems many involved with mesh don't have a feel for, omnidirectional nodes are difficult to do and get any useful range out of. Hams are very familiar with narrowband, e.g. 2M FM where a quarter watt from a clear site can carry for miles. But wideband microwave works very differently and between that and hidden terminal, a "central" good coverage site hub and spoke model doesn't work well. You're better off with a number of shorter range nodes that only hear a few other nodes and can route through them. What a mesh is.

OK, now take it a step further - what value is mesh adding to this solution? If all you're doing is providing a point to point link over commercial hardware, I don't see what adding a nonencrypted end link over RF is adding. If wireless is needed at the endpoint, connect up a wifi router and be done with it. Taking it another step further, what do they need hams for? This is a commercial solution. There are people that make a living setting up, maintaining and administering commercial data links like this with hardware a lot better than ubiquiti. So I see little point to the ham ISP gig unless all you want to do is spend your time and money providing a free service that anyone else would have to pay for.

That's the analogy I use the most. There is no question you can buy an HT way better than a baofeng. But a *lot* of people buy baofengs. The mesh networks I demonstrate and use work fine with a Linksys. It demonstrates the function and brings hams in at a price point that isn't prohibitive. By the time you need the performance of a ubiquity you know what you're doing. There are far more ham applications requiring simple networks than advanced ones. The Linksys checks that box. It's the baofeng of mesh networking. Maybe someday AREDN will load and run on a $15 cheap chinese router. That will be the day I change my tune but today it's BBHN on a Linksys.

Mark, I think we've finally hit the sweet spot of the conversation. It's not about the network per se, it "is" about the applications used on the network. But, it's also about the fun and learning doing it. To your point earlier about lack of interest in your area, what's the fun in building if nobody connects? So it has to start with the application, one that many will want to be involved!

Right now I'm lining up a neighborhood meeting here in east Dallas. I've located and conversed with about a dozen hams who will get together and meet just to get to know the local hams. But at the same meeting I am going to see if they have interest in building a mesh. But, what am I selling? Just the network? I don't think that's enough.

Yes you're correct, professionals do provide the same, but for the specific mission they are employed - Red Cross for example, or Civil Defense, etc.

Hams on the other hand can pick and choose what makes the most sense in public service. I think you have to start with an anchor application that is useful in most parts of the country. I would not think that's a video camera or a VOIP phone necessarily.

Let's say we could agree on a application that inputs and tracks local distribution of food, services and emergency response. Forget about the details, but envision the internet is down and this system is up providing vital information to the local masses. Also, don't worry about how the stations disseminate the info to the masses, there could be several good ideas.

Once we have "the killer application" then we can put in the network that makes the most sense for it, and we have some time to add fun apps and other useful ham stuff as well. Actually, the overall mission might start with the ham application that will draw many into the network, then focus on the public service app and process.

I think that until the applications of true interest become desirable to many people then we could flounder around for many more years with a hodgepodge of technology and not too much progress.

Disclaimer - I'm totally impressed with what's been done to date!!! Those folks are doing it for the love of the technology, accomplishment and public service.

Mark,

I won't convince you, but at 58, I have too much life behind me to waste the wisdom of my years, and too little time left to continue this discussion or to deal with the poor quality of the BBHN/Linksys combo.

Heck even Jim Kinter thinks they are teaching tools or for simple installations and he cut his teeth on them!

Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the DAWG-HSMM
group.

File : /Jim Haynie letter-.doc
Uploaded by : km5l <patrick@...>
Description : In 2003 I wrote a letter to ARRL (Jim Haynie). My career is very much internet related and so I could clearly see possible innovation of the conventional TCP/IP internet networking to a private amateur radio solution. 13+ years later some awesome work has been done on the network, but I'm still not seeing the killer app. The web browser was the killer app that drove people to the internet, it provided a reason to use the network. Without it, we'd still have a few people using BBS and no real internet. Same here, we need a series of applications that hams will want to participate in. Not just voip phones and cameras, but applications in emcom and desirable ham radio activity.

You can access this file at the URL:
https://groups.yahoo.com/neo/groups/DAWG-HSMM/files/Jim%20Haynie%20letter-.doc

Patrick,

Well yes, you need applications for everyday use to sell the idea beyond that of a backup network, which is an important goal in its own right.

You might consider a WinLink or ECHOLINK gateway, a video or audio conference bridge, all on an Asterisk server for VoIP applications, including voicemail and test numbers, a file or web server for your club resources and my favorite, a weather server that collects the weather from many points and maps it with an NWS radar overlay.

In any case you can add cameras and other interesting toys. It can also be a vehicle to teach fellow hams about how this stuff works. Personal web pages in a club directory might be one idea to teach html, php, java, MySQL, et al.

OK, now take it a step further - what value is mesh adding to this solution? If all you're doing is providing a point to point link over commercial hardware, I don't see what adding a nonencrypted end link over RF is adding. If wireless is needed at the endpoint, connect up a wifi router and be done with it. Taking it another step further, what do they need hams for? This is a commercial solution. There are people that make a living setting up, maintaining and administering commercial data links like this with hardware a lot better than ubiquiti. So I see little point to the ham ISP gig unless all you want to do is spend your time and money providing a free service that anyone else would have to pay for.

Bill,

Facebook is for old people...is that us?

:-)

Point taken however...something useful and friendly, but I find FB to be confusing. I can never find things there. Hopefully the open source clones are better.

The general issue of application federation platform service is something of general utility and should be pursued.

Sorry for the slow response... Job interviews trump MESH chatter via email...
MESH doesn't bring much to the table for a network if the hospitals and public safety folks wanted such a wifi network they could go out and buy it... It would cost them millions for a 30 site, muliti-county network while we could do it on the cheap for much less...

If they build it we don't get to play on it... .Just ask the cop or fireman to let you talk on one of their radios for the afternoon... As tax payers we bought it but we don't get to play... If they build it we don't get to do all the RF plots and testing or figuring out how to make it work... We learn ZIP...
If we build it we get to play and just in case the world almost comes to an end we get to put on our ARES hats, shirts, vest and save the day and give them a small part of the internet for such things as:
WebEOC...EM Tracker...VoIP phones...Conferance calls...Video conferenceseMail...FTP file transfer...

We get to do all of the above things plusWe as hams get to link repeaters...Supply the Internet to APRS igates...

The attraction of BBHN is stability. Do not want to be updating all of the nodes multiple times a year.

The approach we are working on in Collin County is to do long distance point-to-point using Ubiquity off the shelf software with BBHN networks at each point.

We will use the "bad old Linksys" routers inside buildings to provide the last 100 yards of the network. ARDEN does not support Linksys. Also neither router is good for applications. BBHN is also working on Raspberry Pi application because it has way more memory and processing power than a ubiquity or linksys router. That is where the applications are. They will seamlessly work in the BBHN network, but no telling how long it will work in the ARDEN network.

Right now the largest network is in Austin with BBHN. They have learned a few things over the years and one of the biggest lessons learned is to have stable SW and not put out upgrades all the time. When you have a lot of nodes it is hard to keep up.

Look at Winlink for an example of being hard to keep up with updates.

Dallas,

Thanks for the info, especially on the apps you've mentioned. Question on WebEOC. I watched a few demos and feel I have a cursory understanding of it.

I looked on the web site and there's three types of WebEOC categories:
1 - WebEOC core (Hosted only)
2 - WebEOC Professional (hosted or on-premise)
3 - WebEOC Enterprise (hosted or on-premise)

Just wanted to avoid the pros and cons of this for now, but let's assume we want to provide a solution to access WebEOC via our DFW HSMM infrastructure, but let's agree for now we want it accessible without the internet - or assume the internet is not accessible in the affected area.

Do you know if this app is used by Dallas county and other local governments around here and if so, is it hosted or on-premise?

Are any of our local HSMM infrastructures providing access to any WebEOC? (using HSMM term as a generic term right now, meaning any BBHN, ARENT, whatever).

Thanks in advance,
Patrick - KM5L

OK, now take it a step further - what value is mesh adding to this solution? If all you're doing is providing a point to point link over commercial hardware, I don't see what adding a nonencrypted end link over RF is adding. If wireless is needed at the endpoint, connect up a wifi router and be done with it. Taking it another step further, what do they need hams for? This is a commercial solution. 3146. HSMM - Strawman proposal

Yahoo group: DAWG-HSMM
Date: 2016-07-17 19:00:04 UTC
From: patrick@...
Topic: 3146 Message: 3146

Stemming from a fruitful discussion came an invitation from AREDN - I think we all are in general agreement we need to standardize on the "killer application" that will propel the interest and thus expansion of HSMM much more quickly and effectively.

Thanks to these folks for getting the party started:
•From AREDN: K6AH, AE6XE, KM5L, KA5TYW, N8NQH,
•From DAWG-HSMM: AE5IB, KD4HNX, WB6TAE, WA7NWP, K5LXP, W2TTT

I've uploaded a powerpoint requesting your feedback. This is a very early draft, call it a strawman. We'll give it a few days and then start sending it out more broadly.

Here's the powerpoint:
https://www.dropbox.com/sh/0up9dj1sgnglq34/AACeEqdRyd0FBEJuYzcKIme7a?dl=0
https://www.dropbox.com/sh/0up9dj1sgnglq34/AACeEqdRyd0FBEJuYzcKIme7a?dl=0

In case you don't have powerpoint, here is an exported video:
https://youtu.be/8jSSSOx-IsU https://youtu.be/8jSSSOx-IsU

You can send your responses via email to me at patrick@RunThisProject.com
mailto:patrick@RunThisProject.com
Or, reply to this post.

Before spending too much more time I'd like to see what interest level this generates.

Thanks and 73,
Patrick KM5L

3147. Re: [DAWG-HSMM] HSMM - Strawman proposal

Yahoo group: DAWG-HSMM
Date: 2016-07-17 19:35:59 UTC
From: Thorsten von Eicken
Topic: 3146 Message: 3147

The proposal certainly makes sense, however, I'm wondering whether there is an alternative to emergency communications. Living in Santa Barbara and having been part of ARES for a couple of years, I have decided that there's no point in hams doing EMCOMM. We have had plenty of wildland fires threatening homes in the past years and not once have hams been approached in any way. I can point to a number of articles by hams across the country that feel the same way. I don't want to start an argument about this topic, I only want to motivate why I'm asking for an alternative.

In the spirit of being constructive, I want to mention a project that I'm starting to think about, which is environmental monitoring. This could be very localized weather (which is very important in fire situations here), but I'm really thinkg more about other things, such as pollution and pesticide drift. Some of this data may well be used by emergency responders because it may be something they don't do at all. They all have communications vans and satellite links, but they don't have tens or hundreds of monitoring probes in a wide area providing data. But I'm more interested in providing the data to environmental and climate monitoring users or researchers. E.g., how many non-profits or university research projects have the capability to place many probes out over a wider area in a cost-effective manner? I don't have a complete proposal around this because I'm just at the beginning of researching what has been done and what might be interesting. I do know that there are very interesting radio issues and lots of open space for experimentation. For example, one might come up with a Wifi backbone with local LoRA radios going to tiny & cheap battery operated stations.

I have operated a 26mi Wifi link out to an off-shore island to bring back images that have been used by a university research team and I have to admit that that has been more rewarding than the time I've spent on emcomm. But obviously that is a personal opinion and also doesn't match with the purpose of AREDN.

Regards & thanks for all the work on HSMM and AREDN!
Thorsten - N6TVE

I am very interested! My local ACS group has been having this very discussion recently. The results of our discussions are on a parallel track. The network needs some specific goals and with these goals comes clarity. I would like to get more involved.

3149. Re: [DAWG-HSMM] HSMM - Strawman proposal

Yahoo group: DAWG-HSMM
Date: 2016-07-18 01:32:05 UTC
From: Patrick Bouldin
Topic: 3146 Message: 3149

Hi Shawn,

Thanks and I'm glad to hear you'll be joining us. Couple of things. First, could you go ahead and review the powerpoint, or video (same content) and provide some responses on the requested areas? Better yet, could you get a set of summary answers from the group you've mentioned that are discussing similar areas?

Also, this is cross-posted on ARDN as well, and in a few short weeks we'll have an official "starting point" - we need a little time with folks like you commenting and ushering out of a strawman proposal into a credible first pass.

Thanks again and 73!
Patrick KM5L

I'll work on getting my thoughts together and start work on getting
feedback from my broader group.

Patrick,

Thanks for organizing the discussion into a pptx.

After a quick read here are some initial comments:

1. Power from a vehicle DC or AC as appropriate. Keep requirements <200 or 400W if AC to match typical in vehicle inverters.

2. Consider different operational profiles. CP, Shelter,

3. Consider end user equipment support requirements.

73,

Gordon Beattie, W2TTT

The "Killer Application" in my opinion is the PI camera that Andrew showed at the Raspberry Pi class, Saturday. He was taking pictures every second, and downloading them to a server on the network, that created a time-lapse video of the weather.

Here is what I like about it.
1. It is something not offered anywhere else.
2. Current pictures and the time-lapse pictures may be of interest to each city's EOC.
3. If the data from the network is of interest to the city, we are more likely to get access to city owned/controlled high places.
4. It is cheap. And it provides more opportunities for high altitude places.

Severe storms are what we get in North Texas. We do not get earthquakes (that cause damage), forest fires, hurricanes, wide spread flooding, or tsunamis.

Kip,

We do that and streaming video as well.

Recording with date and time is important. Selective sampling could be used to forward every nth still to a control center with a detailed set or stream available on demand.

How about VOIP and ROIP for situations where radios don't work using Wi-Fi APs for access from a phone, tab look et or PC? Add in video conferencing or degrade to a chat server with or without file transfer?

I would concede to abandoning the mesh concept in favor of links to hosted services but has that even happened anywhere yet? It seems 1200bps packet enjoyed greater popularity than high speed wireless has at this point. Makes you wonder what it would take. I'm guessing that with the proliferation of wifi and cellular services there's just no allure of it by most hams to try and replicate any form of commercial service. Kinda like how autopatches are now extinct.

> Hams on the other hand can pick and choose what makes the most sense
> in public service.

Don't you think the served agency would be the one to decide, if even they have a choice? Seems a bit pretentious as hams to approach an agency and tell them this is the tool you're going to get, take it or leave it. Can pretty much guess how that's going to turn out.

I think the absence of any apps rising to the top after all this time is a bit telling itself. If you can't think of anything to do with a solution at hand, then what problem is it really solving?

My usual response to "what do you do with it (mesh)" at hamfests and field operations starts out with "whatever you want" followed by some practical examples of messaging, video, IP phones and remote rig control. In the emcomm realm there's Winlink and DRats. Beyond that, what do hams do with computers that isn't local like logging and applications? Frankly if these few are it that's not bad, it certainly can justify the effort to put a simple network together.

What any served agency is going to want is a data pipe. To plug their network into, connecting their servers to their clients. Between throughput, security and address translation problems it's just not possible with any ham solution to date. So the best you can hope for is to serve in a non-critical role with common applications. OK if to do "something/anything" is the goal. To that end I see deployable ad-hoc wireless to be more of an advantage than fixed site ham ISP links as the ad-hoc networks move to where the activity is. I think too much of the development to date has been centered around the ham ISP model with reluctance/denial about the practical and technical limitations that exist. A lot of wheel reinventing going on seeking the allure of being the critical link when all else fails. With any luck the development will continue beyond the egos.

> do it on the cheap for much less...

Two ways to look at that. So you're saying hams can architect and deploy a 30 site multi county network...? Conversely, if hams could do such a thing "on the cheap" why couldn't anyone? Sure, there are hams that do this kind of thing for a living but I doubt there's many who would sign up for such an ambitious project.

> If they build it we don't get to do all the RF plots and testing or
> figuring out how to make it work

And do the maintenance, repair, and support going forward, on your time. Once the "learning fun" is over it becomes a job. It'd be one thing if it was an as-needed volunteer service but in the ham ISP model there's a delivered product. "They" are providing sites, and possibly funding hardware and are counting on this link to work "when all else fails". It takes a lot of effort to keep all that stuff going, effort that in any other realm is a paid job. The other side of that coin is what entity/agency would take seriously a volunteer group that has no guarantee of success and is just "testing and figuring out"?

> just in case the world almost comes to an end we get to put on our ARES hats,
> shirts, vest and save the day and give them a small part of the internet

I also think it's a bit gray (closer to black than white) to subordinate our license and allocation when other services are available. It's one thing to create an on-scene ad hoc network at a disaster, it's another to set up their backup links on our bands because hams will do it for cheap or free.

> We as hams get to link repeaters...Supply
> the Internet to APRS igates...

Yeah, HamWan does that. I know the Rocky Mountain group out of Denver is working on creating a microwave link all through the Rockies. That's actually a pretty worthwhile pursuit provided they don't overly restrict access. They're having a pretty hard time getting shots with enough margin even with commercial gear and big dishes here in NM, so we'll see what happens.

Hey Mark,

Wow I must have done a really bad job at laying this out! I agree with you on both counts. We need to ask the agencies for example how they conduct business and get the requirements - and then come up with the correct infrastructures.

As far as some of the items in the powerpoint, this was a strawman proposal. It can completely change - a strawman is a conversation starter, that's all. Take a look at the questions, we need your input on those - and you'll see that we are actually asking for recommendations on the assumptions.

I have some work to do on the powerpoint!!!

Thanks and 73,
Patrick KM5L

Mark, I actually very much like and appreciate these points. I myself was not really thinking about an "inked" agreement that locked the amateur communities into providing services, almost contractually and guaranteeing work on a day by day basis. But your point is excellent, because if we're not careful that could inadvertently happen.

However, I suspect that an interesting answer would come from the FCC, or some typical county gov't EOC to the following question: "do you feel ARES is *obligated *to provide the services they claim they can (and state as justification for allocation)?" While it's true we WANT to be very helpful we are still a volunteer force and can only do what we can when we're equipped and when we can deploy - but an excellent point, are we ready to commit to be "primary" in certain instances? If we gather requirements and say we will provide services, and then that entity doesn't budget for it themselves then that's a bad thing.

My personal intent has always been tactical / temporary / organized.

So as we generate the requirements we need to be sure and cover this topic very clearly. It could be some in the community actually do want to commit and perform recurring operational, day to day duties. It may also be the case that our solution (to the requirements) is operational deployment to a disaster with agreed upon services - and once primary services are enabled we're out - we did our job.

In the end, I'm absolutely certain we have huge potential and can deliver on realistic goals - but wise concerns brought up here and we'll carry them forward.

Thanks and keep it going!

Hmm. Sounds like Job#1 - Find out how your served agencies intend to use the links and what type of bandwidths are required. Then see how you can best support it.

From a professional point of view (I work for a multinational company supplying equipment and installation services), I have been working with multiple police and fire agencies in deploying voice, video, and data transports with a minimum of 1Gbps using fiber (leased, including dark, and city-owned) and a minimum of 155Mbps over licensed microwave hops. RoIP (Radio over IP) is the obvious application but real-time, full motion video is also being sent over the links from multiple traffic cams as well as mapping and architectural data. E&M circuits for analog LMR, commercial internet access as well as analog and IP based PBXs kind of round out the top applications I have run into. SCADA is near the bottom of the list but traffic light controllers work hand in hand with traffic cams. Commercial internet access can be anything from accessing weather data for firefighting to ordering take-out to keep the "troops" happy. The systems as designed also have to support use of VPN tunneling to remote sites and users. Currently, the bandwidths are not fully utilized but can (and will) be in case of emergency.

So going back to the top, you need to determine what your served agencies need and you are expected to provide in terms of bandwidth, interfaces, and applications (and serving coffee is an application). If the equipment is portable, it is advisable to have several locations pre-surveyed and pre-provisioned for the proper power, ground, and interconnection facilities (to equipment and to antenna) to reduce set up time. During the emergency call out, having the equipment ready to use keeps the group from looking like the Keystone Kops in trying to establish connectivity and wasting time. We are amateurs in that we are not paid for our public service. We do need to present a professional appearance in that we know what we are doing to earn and keep our technical credibility.

Sorry for sounding harsh and discouraging but this is the reality that I face on a daily basis. I enjoy the organic nature of mesh nodes but it really boils down to what the user needs and how best we can be of assistance to them. For me, I'm on permanent call out through my company to work with the various customers (telco, wireless, LMR) that I support to offer my services in assisting with service restoration.

Kevin, I didn't think you were discouraging at all, it's a perfect summation.

I do have a question however. I took note of what you do for a living. If you were an amateur trying to establish amateur mesh connectivity where it hasn't before - and there were a couple of large commercial buildings in the area, already with a lot of WISP and other services on the roof, how would you go about approaching the building owner or leasing agent for FREE access. Or if necessary, how would you try to minimize cost?

Thanks and 73,
Patrick KM5L

Here in Austin the state and the city/county run WebEOC on their own servers... Two different sites... I would assume the state is running theirs from the SOC in Austin... I know very little about that system first hand... During exercises or after action reviews I've sometimes see screen shots... Since WebEOC is a web based tool and you have different folks running each site some of the screens you would expect to be the same are different and that seems to be the topic at every After Action Review... Even it the data is the same the layout is different...

CAPCOG runs WebEOC for 10 counties (Bastrop, Blanco, Burnet, Caldwell, Fayette, Hays, Lee, Llano, Travis, and Williamson Counties) and I assume each COG does the same... I get some exposure to this system because the hospitals in the CATRAC region use it to report hospital status via WebEOC... CATRAC includes all of the counties in the CAPGOG region plus San Saba county... So beside the City/County EOCs feeding info into WebEOC they have 30+ hospitals, folks from Public Health and others...
Currently WebEOC is housed locally on servers but is expected to move to the cloud... That could be a good thing since you don't have to worry about a local flood, fire, earthquake, volcano, etc to take out the local server...

Any PC/laptop anywhere that has access to the internet can be used to login as long as the person has the proper user name and password... All data is encrypted through a https website...

We have Amateur Radio in most of the hospitals, some county EOCs, and a few Police and Fire stations... So we already have our foot in the door to gain roof top access... I know of 3 hospitals that have repeaters and one that has active HSMM nodes on the roof... In fact it is used to link the Georgtown and Taylor repeaters 24/7...
While I'm typing I just want to add:
Since most of the hospitals have web based email, if we had a backbone that would allow an https connection the EOC staff would have access to WebEOC and email...
The goal/plan is not to build them an everyday wifi network... It's just their as a backup should they loose their Internet connection... We would still have to come in and help get them on it I'm sure... What we get is access to Tall Structures with backup power...
I just thought of this...
CATRAC is part of TSA-7 which is headquarters is in Temple out of the HOTRAC... I know they use WebEOC and it's on a different set of servers...

Here is a map showing all of the TSA and RAC regions:http://catrac.org/documents/TSARegionMap.pdf

Subject: Re: [DAWG-HSMM] DFW mesh with 3.4 GHz?

Dallas,
Thanks for the info, especially on the apps you've mentioned. Question on WebEOC. I watched a few demos and feel I have a cursory understanding of it.
I looked on the web site and there's three types of WebEOC categories: 1 - WebEOC core (Hosted only)2 - WebEOC Professional (hosted or on-premise)3 - WebEOC Enterprise (hosted or on-premise)
Just wanted to avoid the pros and cons of this for now, but let's assume we want to provide a solution to access WebEOC via our DFW HSMM infrastructure, but let's agree for now we want it accessible without the internet - or assume the internet is not accessible in the affected area.
Do you know if this app is used by Dallas county and other local governments around here and if so, is it hosted or on-premise?
Are any of our local HSMM infrastructures providing access to any WebEOC? (using HSMM term as a generic term right now, meaning any BBHN, ARENT, whatever).
Thanks in advance,Patrick - KM5L

Sorry for the slow response... Job interviews trump MESH chatter via email...
MESH doesn't bring much to the table for a network if the hospitals and public safety folks wanted such a wifi network they could go out and buy it... It would cost them millions for a 30 site, muliti-county network while we could do it on the cheap for much less...

If they build it we don't get to play on it... .Just ask the cop or fireman to let you talk on one of their radios for the afternoon... As tax payers we bought it but we don't get to play... If they build it we don't get to do all the RF plots and testing or figuring out how to make it work... We learn ZIP...
If we build it we get to play and just in case the world almost comes to an end we get to put on our ARES hats, shirts, vest and save the day and give them a small part ofthe internet for such things as:
WebEOC...EM Tracker...VoIP phones...Conferance calls...Video conferenceseMail...FTP file transfer...

We get to do all of the above things plusWe as hams get to link repeaters...Supply the Internet to APRS igates...

OK, now take it a step further - what value is mesh adding to this solution? If all you're doing is providing a point to point link over commercial hardware, I don't see what adding a nonencrypted end link over RF is adding. If wireless is needed at the endpoint, connect up a wifi router and be done with it. Taking it another step further, what do they need hams for? This is a commercial solution. There are people that make a living setting up, maintaining and administering commercial data links like this with hardware a lot better than ubiquiti. So I see little point to the ham ISP gig unless all you want to do is spend your time and money providing a free service that anyone else would have to pay for.

  The "Killer Application" in my opinion is the PI camera that Andrew showed at the Raspberry Pi class, Saturday. He was taking pictures every second, and downloading them to a server on the network, that created a time-lapse video of the weather.

Here is what I like about it.
1. It is something not offered anywhere else.
2. Current pictures and the time-lapse pictures may be of interest to each city's EOC.

3. If the data from the network is of interest to the city, we are more likely to get access to city owned/controlled high places.
4. It is cheap. And it provides more opportunities for high altitude places.

Severe storms are what we get in North Texas. We do not get earthquakes (that cause damage), forest fires, hurricanes, wide spread flooding, or tsunamis.

Two ways to look at that. So you're saying hams can architect and deploy a 30 site multi county network...? Conversely, if hams could do such a thing "on the cheap" why couldn't anyone? Sure, there are hams that do this kind of thing for a living but I doubt there's many who would sign up for such an ambitious project.Over a decade ago we installed 2 dual band radios and antennas in 9 hospitals... A few years later we expanded it to 21 others... We keep adding a new hospitals are built... We use Winlink to send email at 1200 baud half duplex so the through put is like 600 baud... Depending on the ARES group some sites get tested more often than others... Here in Williamson Co we have 20 or so that test the Winlink some 500 times a week with test messages... We also do site visits every 3rd Friday at 4:00 PM... 12-20 volunteers... We participate in the hospital's annual Full Scale Exercise (All Hazards)... We spent a few thousand dollars on WiFI gear to link two new Fusion repeaters... To some of us building and keeping it running is just part of the hobby... Kinda like buying 400-500' of 7/8" hard line for that repeater on that TV tower...
The beauty of doing it on a hospital is you push the button on the elevator and it takes you to the penthouse... You might have to walk up 1-2 flights of stairs or climb a short ladder to gain access to a roof... ZERO tower climbing...

> If they build it we don't get to do all the RF plots and testing or
> figuring out how to make it work

And do the maintenance, repair, and support going forward, on your time. Once the "learning fun" is over it becomes a job. It'd be one thing if it was an as-needed volunteer service but in the ham ISP model there's a delivered product. "They" are providing sites, and possibly funding hardware and are counting on this link to work "when

all else fails". It takes a lot of effort to keep all that stuff going, effort that in any other realm is a paid job. The other side of that coin is what entity/agency would take seriously a volunteer group that has no guarantee of success and is just "testing and figuring out"?
Yes, the testing takes about an hour a month... We have 6 hospitals, 1 police station, 1 fire station, 1 county EOC with ham gear... We average 50 or so at every ARES meeting... Replacement gear/parts are supplied by the RAC... To us it's just another part of the hobby...

> just in case the world almost comes to an end we get to put on our ARES hats,
> shirts, vest and save the day and give them a small part of the internet

I also think it's a bit gray (closer to black than white) to subordinate our license and allocation when other services are available. It's one thing to create an on-scene ad hoc network at a disaster, it's another to set up their backup links on our bands because hams will do it for cheap or free.
But if they pay to have some commercial WiFi company install it we don't get to play with it... The goal is to build US a MESH network so we can play with cameras, raspberry PIs, WiFi, etc...If the backbone is on the Part 15 bands we are not using our licenses for the backbone... The mesh gear is connected to the backbone via Ethernet...

> We as hams get to link repeaters...Supply
> the Internet to APRS igates...

Yeah, HamWan does that. I know the Rocky Mountain group out of Denver is working on creating a microwave link all through the Rockies. That's actually a pretty worthwhile pursuit provided they don't overly restrict access. They're having a pretty hard time getting shots with enough margin even with commercial gear and big dishes here in NM, so we'll see what happens.

Patrick,
that is something I do not have an answer for.

Many of the LMR projects I get involved with are sited in government owned buildings so there is probably an internal chargeback system for cost purposes. WiFi equipment will consume almost no power compared to the systems I have worked with. At the commercial repeater/tower sites in use, there are already pre-existing leases in place in which I install equipment, With the newer LTE services being explored, I see an increase in recurring costs for more repeater sites to host the "Small Cell" type equipment in support of Public Safety communications. This also includes the interiors of commercial structures as radio is not known to universally fill all the nooks and crannies of a building.

My recommendation is to have a sponsor in your served agency who would be willing to help you obtain space and right of way to have the equipment sited and cables run into the shelter, up and down the risers, and up the antenna mast. This will save the cost of separately hiring a tower crew at least to mount the antenna as many agencies are not covered for tower climbing activities (insurance, training, etc). I am also a fan of having all the active electronics (Out Door Unit - ODU) located down low, separate from the antenna so one does not have to climb towers for repair or replacement of the failed APs. Again, most of the agencies I have worked with do not have people certified to climb towers so keeping active components at a level where they can be readily accessed is a necessity to expedite repairs. This will result in having to deal with the coax losses but as long as your keep within the frequency limitations of your license, you can amplify the signal to make up for the losses.

kevin
kc6pob

Kevin, I didn't think you
were discouraging at all, it's a perfect
summation.
I do have a
question however. I took note of what you do for a living.
If you were an amateur trying to establish amateur mesh
connectivity where it hasn't before - and there were a
couple of large commercial buildings in the area, already
with a lot of WISP and other services on the roof, how would
you go about approaching the building owner or leasing agent
for FREE access. Or if necessary, how would you try to
minimize cost?
Thanks
and 73,
Patrick KM5L

It's a non starter based on the hardware alone. You're proposing a network made of sole source consumer grade hardware, which as of today has a sole-source volunteer supported code base. Even if a network could be constructed with it, there is no guarantee there would be hardware or software support for it going forward. The AREDN team could take their marbles and go home just like they did to BBHN, and where would this effort be? Sure, it's open source but unless you have a backup development team, AREDN grinds to a halt. Or a bug shows up the AREDN team can't fix for one reason or another. Game over.

> As far as some of the items in the powerpoint, this was a strawman proposal.

I am firmly in the camp that amateur radio has no business doing emcomm, at least in this formal context. So I guess I don't have much more to say about it. My interest in HSMM is purely the "fun" side, as an accessory like a control link radio or operating aid. The suggestion of ham networks for education, research or other public role may have some merit, as encryption isn't required and the resource can be shared between the ham community and end user.

The emcomm solution to provide has already been solved commercially (and in spades), and those solutions will be fully regression tested, commissioned and not have the physical, operational and security issues a volunteer deployed system will have. I work for a company that makes these solutions and has been selling them since about 2007 to government. I have no problem with the idea hams could set up a network in a support role for some noncritical mission (parades, maybe shelter support) but when you start talking about creating applications and setting up a fixed network for an entity like an EOC, hams are way out of their league. Having worked for Motorola servicing public safety radio, E911 and microwave you have no idea just how backwards ham radio appears in comparison. One comment in the last thread was the millions it would cost to create a network. That's an intangible number out of hand but there's a reason commercial systems and networks cost so much - they're expensive to create with their bandwidth, redundancy, security and support. To think that can be replicated by some hardware off of amazon with some open source code running on it is a bit ridiculous. To provide anything less isn't going to garner much interest by anyone. The solution is to allow their existing systems to run, not pull the rug out and run someone else's compromised system. That's not so say there's not a killer app for ham high speed networking but I can guarantee it won't be in any public safety mission critical role. Since AREDN is being developed based on this premise I see a rude awakening coming when Conrad and company figure out it's not going anywhere, or when they see they're doing a full time job's worth of effort just to serve niche deployments.

OK, but in the current emcomm climate there is no possibility of providing any service without an established relationship with an agency, proper training, certification, etc. The idea if showing up with an ethernet plug is no more futile than showing up at a disaster scene with an HT proclaiming you're there to help. It's pretty safe to assume any networking solution is going to be agreed upon in advance. It's just too complicated and dynamic to know what to create or what it needs to do on-demand.

> I suspect that an interesting answer would come from the FCC, or some typical
> county gov't EOC to the following question: "do you feel ARES is obligated to

I think that implied level of service comes in the form of an MOU or specific relationship. If the agency has confidence hams can pull it off they can write it into their emergency plans.

> While it's true we WANT to be very helpful we are still a volunteer force and can only
> do what we can when we're equipped and when we can deploy

Which ain't much, and ain't often. Which is why it's borderline negligence any public safety entity would put ham radio in any critical role. "When all else fails" the population including the hams is heading for the hills. The typical role anymore is manning a shelter counting toilet paper rolls or how many pets are on scene and I guess if that floats you're boat that's OK. In terms of volunteer points I'd say joining the Red Cross would be a much better use of one's time than manning a radio passing arbitrary traffic.

> If we gather requirements and say we will provide services, and then that
> entity doesn't budget for it themselves then that's a bad thing.

So you're already setting the stage that the emcomm service will be by definition secondary/non critical. Which by all rights it really is. From that standpoint then in the eyes of any agency hams are just useful idiots/meat servos that they can give something to do if they show up. Because they need a contingency plan in that event, then they've already solved the problem and don't need hams at all. It would only be a solid local relationship that would instill any level of confidence some number of hams would be there "when all else fails".

> My personal intent has always been tactical / temporary / organized.

But in the ham ISP application the hardware has to be set up, running and continuously tested. Depending on the complexity of the system this may be quite doable with modest investment and volunteer support. But in order to be taken seriously, it has to work when

it's needed. Given that amateur systems are no more (and are often much less) reliable than customer/agency owned systems, this is not a given.

> In the end, I'm absolutely certain we have huge potential

Frankly I don't see it, ham radio has never served a significant role in anything like this. But I do see networking as a tool in the toolbox and if you can find a spot for it, more power to you.

Hi Mark, as I read through the feedback it dawned on me that we just need to get a lot more info on the project doc - in fact every single area you mentioned I agree has to be covered and is fully intended. I don't think it will work to slam anything together - example - the relationship with the agencies, etc. - please recall from the powerpoint that this relationship and review has to happen. We want everyone inside kicking out, not the other way around. On your paragraph suggesting we would set up emcom as non-critical - I never said that - in fact it wouldn't be worth it to spend the time if the payoff were not so great.

In my view the role we would fill would not be otherwise be in any agency budget - I don't think it is today, and I don't see that in the future - so our contribution will be meaningful.

Mark whenever I do corporate business process improvement, the hardest part of the job is getting through the doubters, because they've "been there, done that". Not every project is successful, the ones that are successful always have 100% full support from the CEO and down. That's why we have to make sure we are inclusive. In this case however it will be even harder, because amateur radio operators are volunteers and they can become disgruntled very quickly - unlike a paid job where they have to at least appear to be open minded. My hope is that we get the best of the ideas and everyone can keep the big picture in mind, and not be offended if their particular solution isn't 100% adopted. I think we can do it, if we literally take an oath that each of us agree to set aside personal biases and go with the flow as long as we are achieving our business objectives. In fact, we should take the oath before we start! :)

PS: We barely started gathering data to even draw up proposed objectives - would love any help you'd like to offer! In fact a small group of us are still trying to formalize the committee... early days!

Thanks and 73,
Patrick KM5L

Hey Patrick,
Now that I/we/this community has given reasons why a mesh may not be good investment for a formalized EMCOMM environment, how about looking at it within a more organic and ad hoc environment; possibly smaller planned events where data transfer can be beneficial such as CERT, parades, marathons, bike-a-thons; traditional areas where amateur radio can safely venture into with a reasonable expectation of success. These are events where a mesh can be beneficial where communication links can be short between APs and the expected data requirements well within the pipe size of an AP. Granted, this is the more traditional uses of the technology but these are well suited for it's use..

In mentioning CERT, this would be an easy way in to augment public safety during real and training scenarios but on a more reasonable and localized scale. In doing so, it would always help to be present during the training scenarios such that the communication capabilities that you bring to the table are not an unknown and that you do become welcome. The first duty as a member of CERT, the second as an amateur radio operator.

However, due to the advanced stage of network development for public safety LMR development, including the use of links longer that the reach of WiFi, do not expect that Mesh configured APs can replace this communications infrastructure. If a real communications emergency would happen today, I would fully expect to see the wireless carriers getting involved in bringing in a lot of equipment in the form of COWs (Cell on Wheels) and where an ad hoc cellular network would handle dispatches. These are the same COWs that are being used and practiced with at all the major sports and political events in the last couple of years.

Right. Contrast a nanostaton running AREDN to the examples below. This stuff has been used in the field for YEARS now. And at the risk of being termed a "doubter", I do seriously doubt any ham solution can come anywhere close. So let the pro's do the mission critical/when all else fails - that ship has sailed. The only chance of amateur involvement in public service are the low/non priority support roles where there isn't any funding or risk. Neighborhood CERT, setting up a water level monitor in a flood location, serving up a video feed of a point of interest - those are opportunities more in line for what hams can realistically achieve and provide a nominally useful contribution. Do those well and the perception and utilization of the amateur service will be boosted by a much greater extent than going down the road of saving humanity with a network of COTS wifi AP's and ultimately netting nothing.

Rapidly Deployable Network

The RDN is a compact, self-contained, man-portable 4G network-in-a-box that enables the establishment of a trusted network for secure, real-time, mission-critical voice, video, data, and sensor communications. It provides mobile, flexible, and self-sufficient communication networks that can adapt to the needs of the mission, whether it is within the confines of a hurricane-ravaged region, military convoy, or combat zone. The RDN can quickly establish communications and extend C4I (Command, Control, Communications, Computers) into areas where communications do not exist or are unsuitable for military use. It can be deployed as a single-cell solution for local communications, or as an ad hoc network with multiple nodes. It can be fully operational in fewer than 10 minutes, operates with minimal user intervention, is approximately the size of a shoebox, and weighs about 10 kg (22 lb).

Deployable Cellular Network

DCN products provide cellular networking functionality in a tactically-oriented, flat architecture. The first generation DCN, the TacBSR, is the smallest, easiest to deploy and operate GSM cellular system available today. It combines multiple network elements into a complete, multifeatured cellular system and also serves as a gateway between cellular and Voice over Internet Protocol (VoIP)-based networks. TacBSR is small, light, and power efficient, and can be implemented on all types of platforms —man-portable as well as ground and air vehicles. The BSR technology is a state-of-the-art cellular technology developed by LGS Innovations’ Government Communications Lab (formerly a part of Bell Labs) specifically for deployment in military, disaster response, and search and rescue operations.

<http://lgsinnovations.com/wp-content/uploads/TacComm-V1.pdf>

Set aside 12 days, dedicate 236 acres, add food, thrill rides, livestock exhibits, and musical entertainment and host 500,000 people, and you have the 2015 New Mexico State Fair. Behind the scenes of this highly anticipated annual event is a team of public safety professionals comprising law enforcement, emergency responders and State and Local government officials, brought together by the State of New Mexico to keep everything running smoothly.

And, keeping all these first responders, departments and agencies 100 percent connected, 24/7, is a dedicated 4G LTE Public Safety Network from General Dynamics Mission Systems. Using the most advanced wireless technology available today, this dedicated 4G LTE network delivers greater coverage, capacity, connectivity, cybersecurity and resiliency than any other public safety wireless system.

Housed in a compact, easily deployed communications trailer, the General Dynamics' 4G LTE Cell on Wheels provides voice and data communications for real time sharing of information, access for all public safety agencies and the ability to instantly deploy resources and make actionable decisions.

Hey Kevin and Mark -

Excellent input - and the alternatives mentioned do seem to have the potential to have a big positive impact.

Just for my clarification, and please trust me this is not a baiting question by any means, I simply don't have nearly the emcom and CERT experience that many others do.

I am curious though Kevin on what kind of distinction between a CERT communications support activity (in response to community disasters) compare to "emcom" support activity? In other words why emcom is not so feasible for us to support and CERT is feasible for our support? I noted "planned events", but would there be some planned events in CERT we would support, and some disaster events that CERT is involved we would not support?

That question aside, I certainly see the value of supporting planned events in a way that is appreciated by the community, and agree it's a worthy goal in our planning.

Thanks and 73,
Patrick KM5L

Mark I can certainly see what you mean, and agree it would be difficult to justify trying to displace something commercial that is working, and working well. I would like to follow-up on that though.

Our assistance is part technology and part process/organization/motivation. So, again not a baiting question I simply do not know at the moment; are you saying that the first 24-72 hours or so after widespread natural disaster that the commercial technology is being deployed and also effectively (nationwide, and predictably in the aftermath)? Such that if you were to ask municipalities if they felt and saw the positive impact with communications between agencies and private relief organizations that they would clearly point to it?

The '90's a long way off at this point. My only personal experience with actually being in a tornado path and having my own community (Lancaster Texas) so seriously damaged was frustrating as a ham.

In the early evening after my wife and I were leaving from our softball game we could see a monster of a storm coming - I told her "that's going to be a &*# of a storm, we need to get home". There were not many deaths, but a couple hundred houses were missing the next morning, and the early hours after the storm there was not much organized ham communication going on. I distinctly remember cell sites down (I do realize the build out was much less then), and also the police didn't have radio for a few hours.

But what struck me (other than losing 2 mature trees and my 1200 sq. ft. barn - but thank God my wife and two kids were unharmed) - anyway, what struck me was that the response seemed extremely chaotic. There were agencies everywhere but it didn't seem like much coordination between them. In fact I showed up with my radio gear and after determining there was no active role I set my talkie down, picked up a chain saw and worked for the next several days.

I'm sure things have changed as far as technology, I just wonder if they have made great strides in the response protocol between the agencies, private support and volunteers. Oh, that reminds me, man we could have used some major communication coordination on the clean up, it was very random for a few days with well meaning organizations (churches, Red Cross, random volunteers).

So do we know that the immediate response for deploying temporary inter-agency communication was adequate in the aftermath of the 2015 storms, for example? Who would we ask?

Thanks and 73,
Patrick KM5L

Decades ago when technology wasn't quite as pervasive hams might have had capabilities that the public or commercial sector didn't. Today it would be a very unusual circumstance hams had anything that was was better in just about any way. Except those that are involved in the industry, most people have no idea what's behind the curtain in terms of commercial and public systems and infrastructure. Hams have incrementally advanced technically over the past couple decades but the commercial sector has grown exponentially. For some reason hams think they've got an edge on "when all else fails". That commercial and public entities haven't considered or anticipated those scenarios. Anymore, when all else *does* fail means something pretty terrible is going on. When things are that broken you're pretty much past the point where hams are going to do much and to think emergency response agencies haven't already planned for those scenarios is ignorant.

> Our assistance is part technology and part process/organization/motivation.

But there's no resources behind it. It's not only a volunteer force, it's a *small* volunteer force. Nationally we have what, 10 'go kits' the League manages and sends out? You see pockets of activity where some funding for equipment or infrastructure exists, usually in the form of a public funded repeater or some transceivers at an EOC. That's the best that it gets, otherwise it's a small contingent of (old/retired) folks with widely varying capabilities using self provided equipment. Realistically, what can any agency do with that? The League has attempted to create some modicum of standards and structure but there's only so much they're going to do with such a limited resource, and frankly I think they're scared of making it any more formal than it is. So you're right when you say it's part technology, process, organization and motivation but you have very little of any of those to work with. You're looking for a "killer app" but you need everything else around it too.

> again not a baiting question

No worries. I enjoy a civil debate. And I can type 100+ wpm... :-)

> are you saying that the first 24-72 hours or so after
> widespread natural disaster that the commercial
> technology is being deployed and also effectively

Yes, for the most part and getting better all the time. Looking back the last 10 or so years observe how even consumer networks have been increasingly reliable. People were streaming live from the earthquake in Haiti. News networks were there within hours and giving live reports. They have their deployable satellite links, what makes you think public safety and military entities don't too? During hurricane Sandy the cell networks stayed up or were restored very quickly. The stories you heard weren't that the network went down but that people had no way to charge their phones. When you have deployable

network equipment that can be trailered in or in the case of the LGS DCN carried in a backpack if necessary, service for military and agency networks can be bridged and patched much more quickly than ever before. The consumer networks are not far behind.

For widespread disasters like a Katrina or a large earthquake, where infrastructure of all types is broken or disrupted one has to consider the utility of communications into that area. The example of that I like to cite is a ham I know that lived in New Orleans during Katrina who actually rode it out there (retired military/self sufficient type). He used all the same adjectives you heard from the press - "surreal", "war zone", etc. He set up a station and ran it off his car battery. Now what? Sure, he could make contact outside his area. But practically it didn't solve any problem. People around him had no way to relay information to him, and he had no way to relay information back. And just what could he convey that wasn't already known? At a fundamental level there was no uncertainty where the disaster was, or what was needed. So having a guy in the thick of it doesn't really change much. Sure the need is there to relay calls for aid but it's dispersed, and there isn't and cannot be a sufficient density of hams to solve that. From life or death to health and welfare traffic, there's no way for victims/evacuees to find and access ham operators even if they were there. Now today when just about every citizen has a cell phone or is near someone that does. The right way to deal with widespread communications is to provide the connectivity and let people do it themselves. One satellite linked airborne cell site can service literally thousands of people within it's line of sight in the span of an hour. One ham station might pass a few hundred messages a day and those have to be relayed. The usual ham response is "a few hundred is more than zero" and that's correct. As an independent effort hams can get together and make that happen if they want. But to sell that idea to an agency as a backup when they have access to a tool they can drop in from a helicopter and check the box, you have quite a sales pitch to do.

So we're back to the non critical/support role ham radio can realistically offer. This is after the fires are out, waters recede, looters rounded up and aid agencies are being established. Communications is part of that and aid traffic on cell/IP networks may not be high enough priority to be allowed yet so here's were some hams showing up and creating lines of communication are useful. Here's where the MOU's with organizations like the red cross get the foot in the door. It would be terribly useful if some standards were developed as to what they're expecting and what we should deliver rather than the current regional/event centric response we have now but it would seem that would be the goal.

> if you were to ask municipalities if they felt and saw
> the positive impact with communications between agencies
> and private relief organizations that they would clearly
> point to it?

Deployable networks not quite that generic. Access to temporary networks is granted on a priority basis just as on consumer networks. Joe Sixpack trying to call his wife gets a busy signal when the fire chief is on the horn. Access by outside organizations may not even be possible or allowed. Relief organization traffic while potentially important isn't priority, so they're either self reliant or out of luck. Now you're going to step in and say here comes ham radio to save the day. And my response will be to see above, a limited resource, small volunteer contingent. What organization would hang their hat on that? Historically a few, in a few places.

> My only personal experience with actually being in a
> tornado path and having my own community ... so

> seriously damaged was frustrating as a ham.

> organized ham communication going on.

OK, but to accomplish what? A team of people with chainsaws instead of HT's would probably be a lot more useful.

> also the police didn't have radio for a few hours.

And you can bet the minute the tornado was gone there was a team of commercial 2-way guys on it doing whatever they needed to get them back going. Been there, done that. Public safety radios nearly universally have a simplex/talkaround, failsoft, mutual aid and tactical channels so while maybe their primary dispatch was out, they still had means to communicate. Again, an assumption that agencies didn't think about the possibility their primary dispatch channel going down and not having a backup. Most municipalities I serviced had way more backups and redundancies than anything I've ever seen in ham radio.

> what struck me was that the response seemed extremely chaotic.

Public safety is manned for day to day. When things are turned upside down there's only so much resource to deal with the flood of calls for service. So yeah, run a tornado through a town and it's going to break things. If communications remained 100% functional it wouldn't change the situation much. There are only so many fireman and policemen and they have trained for these things.

> In fact I showed up with my radio gear and after determining there was no active
> role I set my talkie down, picked up a chain saw and worked for the next several days.

Well, there you go.

> I just wonder if they have made great strides in the response
> protocol between the agencies, private support and volunteers.

I don't have evidence to back it up but my perception is private organizations and volunteers will be on their own. That translates to self sufficiency (bring your own network) or opportunity (use someone else's when it's available). I think the goal of amateur emcomm for some time has been to elbow in to provide service whenever and wherever possible in the private support role. But there's just not enough numbers and capability to garner much attention or acceptance. In my decades of participation and observation any inroads hams have made are at the local level, sponsored by a proficient and active group that digs in and makes it happen. And that's just to get the chance to count the toilet paper rolls at the evacuation shelter. When you read the after action reports from the League, for the most part groups report they ran nets amongst themselves and relayed some messages between EOC's. Oh yeah, and they were "ready" (for -?). In a bigger disaster you just might handle some volume of traffic supporting relief logistics. Anticipating that sliver of opportunity, then having the equipment and manpower to make it happen for that one in 10,000 chance is a tough challenge. In the last decade where agencies have upped the ante by requiring ICS/NIMS training/certification, the resource pool has been diminished even further. I bailed when the local municipality refused to recognize amateurs as volunteers and required us to carry our own bond to participate.

> man we could have used some major communication coordination
> on the clean up,

I think that's well past the point of being an emergency so therefore no legitimate amateur role at all.

> So do we know that the immediate response for deploying temporary
> inter-agency communication was adequate in the aftermath of the
> 2015 storms, for example? Who would we ask?

If you mean from a public safety inter-agency perspective that's something ongoing and has been since 9/11 brought that issue to light in a big way. I know that most dispatch centers have facilities to patch disparate agencies together from separate networks, and within the same network sub groups can be dynamically linked. There are federal guidelines for wide area interoperability but as far as how those standards are implemented and utilized I can't answer. I'm not sure it matters in an emcomm context - it's not like hams are going to be the backup between FEMA and the National Guard, or the state police. About the best you're going to get is having a seat at an EOC providing reports from the field, and with a lot of ground work helping the Red Cross get supplies where they're needed. Or stick with the more pedestrian support role for parades and marathons where there is still a place for a guy with an HT to help out.

CERT in my city is much like a local self-help group for local emergencies/disasters. They are given basic training in first aid, fire suppression, and extrication (i live in earthquake country!). CERT personnel are required to stand down once the professionals are on scene unless they have the correct specialized skills. Communications would be more in line with Amateur Radio operators as little training is required to make one a communicator between CERT members. At the police and fire dispatch level (and including city services), the dispatchers talk the talk on a daily basis and possess enough knowledge of the what resources can be sent where or what mutual aid resources can be had without having to ask around. The dispatchers also know enough of the radio systems to improvise on the spot to get over problems they encounter including the use of mutual aid frequencies. Finally, they hear the nuances of what is being aired to be able to ask the next (important) question as they work as resource managers. You can't get that experience from taking emcomm classes or RACES training.

In my area, CERT does not get activated a lot (thankfully). Local police and fire call up non-sworn personnel and go on mutual aid, if need be, to handle planned events as practice for emergency call out. Local emergencies are handled similarly as I have heard up to 7 different agencies (adjacent cities, county, US Coast Guard) called in for assistance. (Yes, Redondo Beach and the surrounding cities still exist on analog radios for the time being so they are scanner accessible!)
73,
kevin
kc6pob

Kevin on what kind of distinction between a CERT communications support activity (in response to community disasters) compare to "emcom" support activity? In other words why emcom is not so feasible for us to support and CERT is feasible for our support? I noted "planned events", but would there be some planned events in CERT we would support, and some disaster events that CERT is involved we would not support?

Very good input, Kevin, thanks.

I think where we're at right now is an interesting distillation of what may make sense.

For the next few days, possibly weeks, a few of us are out collecting some data - we think we have a good objective being distilled - more later.

Thanks all,
Patrick, KM5L

3178. Deployable mesh system

Yahoo group: DAWG-HSMM

From: Dale Urban
Topic: 3178 Message: 3178

I have been following the conversation with interest about deployable vs. wide area mesh networks.
Take a look at this video https://youtu.be/GvAyf5LpDrg this concept would work great for a mobile deployable mesh system with simultaneous voice and data. A manpack style radio where you could use it pedestrian mobile or in a vehicle or home base station using the 1296 mhz band or maybe the a ubiquiti products would seem to be ideal. I know the radios in the video are very expensive and we would never see this in the amateur world but I think the concept would be worth looking at. Dale N0KQX

3179. DCC Call for Technical Papers: Deadline Extended to August 12th - ARRL/TAPR DCC (Digital Communications Conference), St. Petersburg, FL, September 16 - 18, 2006

Yahoo group: DAWG-HSMM
Date: 2016-08-10 05:32:00 UTC
From: Mark Thompson
Topic: 3179 Message: 3179
Attachments: 1 described; binary payloads are missing from this source WARC

DCC Call for Papers - Deadline Extended to August 12

Technical Papers are being solicited for presentation at the 35th Annual ARRL/TAPR Digital Communications Conference (DCC), to be held September 16-18 in St Petersburg, Florida. Papers will also be published in the Conference Proceedings. Authors do not need to attend the conference to have their papers included in the Proceedings. The submission deadline has been extended to August 12, 2016.
The ARRL/TAPR Digital Communications Conference is an international forum for technically minded radio amateurs to meet and present new ideas and techniques.
Paper/presentation topic areas include — but are not limited to — software defined radio (SDR), digital voice, digital satellite communication, digital signal processing (DSP), HF digital modes, adapting IEEE 802.11 systems for Amateur Radio, Global Positioning System (GPS), Automatic Position Reporting System (APRS), Linux in Amateur Radio, AX.25 updates and Internet operability with Amateur Radio networks.
Submit papers to via e-mail (maty@...) or via post to Maty Weinberg, KB1EIB, ARRL, 225 Main St, Newington, CT 06111. Papers will be published exactly as submitted, and authors will retain all rights.
http://www.tapr.org/dcc#dcccallforpapers

http://www.tapr.org/dcc

ARRL/TAPR DCC Saint Petersburg, FL September 16 - 18, 2016
Call for Technical Papers
Technical papers are solicited for presentation at the ARRL and TAPR Digital Communications Conference and publication in the Conference Proceedings.
Annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication.
Details on Call for Papers & Submission Guidelines are on TAPR DCC web site.
Submission of papers are due by July 31st, 2016 and should be submitted to:Maty Weinberg, ARRL225 Main StreetNewington, CT 06111or via the Internet to maty@...
Note: Papers may continue to be accepted for a short time after deadline so please submit your paper as soon as possible if you haven't done so already.

http://www.tapr.org/dcc#dcccallforpapers

Details on Call for Papers

Technical papers are solicited for presentation at the ARRL and TAPR Digital Communications Conference for publication in the Conference Proceedings.Annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication.The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work, and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and

software advances, theories, experimental results, and practical applications. Topics include, but are not limited to:
- Software Defined Radio (SDR)
- Digital voice (D-Star, P25, WinDRM, FDMDV, DRMDV, G4GUO)
- Digital satellite communications
- Global position system
- Precise Timing
- Automatic Packet Reporting System (APRS)
- Short messaging (a mode of APRS)
- Digital Signal Processing (DSP)
- HF digital modes
- Internet interoperability with Amateur Radio networks
- Spread spectrum
- IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio
- Using TCP/IP networking over Amateur Radio
- Mesh and peer to peer wireless networking
- Emergency and Homeland Defense backup digital communications in Amateur Radio
- Updates on AX.25 and other wireless networking protocols
- Topics that advanced the Amateur Radio art

Submission Guide Lines

Anyone interested in digital communications is invited to submit a paper for publication in the Conference Proceedings. Presentation at the Conference is not required for publication. If you know of someone who is doing great things with digital communications, be sure to personally tell them about this!See above for deadlines and where to submit your paper.Some quick guidelines:
- Papers should be on 8-1/2 X 11 inch paper with the following margins: left and right, 0.75 inch; top, 0.8 inch; and bottom, 1 inch (very important).
- Structure of paper should be (see single column example below, two column should follow a similar format):
- Title
- Author(s) with affiliation
- Abstract (200 words or less)
- Key words (3-5)
- Body
- Reference List

- Papers can be in one- or two-column format.
- Use 12-point Times Roman for the main body of text; do not number pages.
- Photos and drawings should have good contrast. Note: a photocopy gives a good indication of print quality.
- Electronic submissions can be made in any of the following formats:
- Adobe Acrobat PDF;
- Microsoft Word

- Reference citations and other topics not explicitly discussed in this list should follow a recognized standard format (APA , IEEE, etc).
- A biographical page is to be included with the manuscript. It should contain Name, Address, Phone, and E-mail for each author as well as a short descriptive paragraph about the first author. The bio page will be used to contact authors concerning the conference and presentation schedule.

Release form:
A formal release form is not required, but indicate that the paper is being sent for use in the Proceedings of the ARRL and TAPR Digital Communications Conference. You are only giving permission for your paper to be printed in the Proceedings.Example Single Column Page Layout
Two column would be similar in nature, but with two columns. View Paper Example

This looks a lot like what Raytheon's JPS stuff was born from, maybe. Appears that Raytheon closed it down http://www.9-1-1magazine.com/Corp-Raytheon-Closes-JPS-Comms-Business-Unit?TopicID=519.

KB3JUV had some neat pics of the annual mobile command vehicle rallies on Picasaweb but that site is gone now, that's where I learned about the JPS interop stuff. Looks like Archive.org has them but maybe this link https://get.google.com/albumarchive/101611343944021359164?source=pwa will stay up a while (until Google kills that too). What JPS was http://www.raytheon.com/rtnwcm/groups/gallery/documents/digitalasset/rtn_141802.pdf.

Here are some current pics https://plus.google.com/+JustinKates/photos of his.

3186. NTX-AREDN Meeting Sat. Morning Oct. 8 At St. Barnabas Presby Church

Yahoo group: DAWG-HSMM
Date: 2016-10-03 21:47:16 UTC
From: Douglas Kilgore
Topic: 3186 Message: 3186

There will be a meeting of hams interested in the Amateur Radio Emergency Data Network (AREDN) in North Texas on Saturday morning, Oct. 8 at St. Barnabas Presbyterian Church, 1222 West Beltline Rd, Richardson. A 10:00am informal work and node testing session will be followed a formal presentation at 12:30pm to the North Texas Microwave Society (NTMS) which meets in the afternoon in the same room. Visitors are welcome.

The purpose of AREDN is to deliver quality, high-speed data communications for Emergency Communications using 2.4, 3.3 and 5.8 GHz amateur radio frequencies not shared with Part 15 WiFi users. Amateur developed software is loaded into commercial off-the-shelf equipment which is then used to create a mesh data network.

More info about AREDN can be found at: http://www.aredn.org/

The Google Forum for the North Texas AREDN SIG is available at:

https://groups.google.com/forum/?utm_medium=email&utm_source=footer#!forum/ntx-aredn

3187. Re: [NTX-AREDN] AREDN Work and Testing Session - 8 October - Meeting Time Change

Yahoo group: DAWG-HSMM
Date: 2016-10-06 05:26:38 UTC
From: Douglas Kilgore
Topic: 3187 Message: 3187

In order to give us more time to test and load firmware, the doors to the church will open at 9:00am. The NTMS group starts gathering at 12:00 so we will have about 30 minutes to meet them before Bill Richards KM5VZ makes a Power Point presentation about AREDN to them about 12:30pm.

I will have the Ubiquiti ToughCable (Carrier grade) CAT-5e cable for sale at the meeting - $.65 per meter. Also have the ToughCable connectors for $.75 each.

If you plan to plug into the AC power, bring an extension cord.

Talk-in will be on the K5RWK 147.12 repeater.

3188. Save this date Technician level training class

Yahoo group: DAWG-HSMM
Date: 2016-11-06 20:10:16 UTC
From: mbpruden@...
Topic: 3188 Message: 3188

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on December 3rd-4th, 2016. The class will be held at the Allen Central Fire Station training center, which is located at 310 Century Parkway, in Allen TX.. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 3:00pm on Saturday and 9:00am- 2:00pm on Sunday, with the EXAM starting at 3:00 on Sunday. Limited parking should be available on the north side of the fire station. Additional parking is available across the street (Century Parkway), at the City of Allen municipal complex. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).
Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class, and read through the course material at least once. You should not expect to just walk in to the two day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide, and marking any items that you have questions about, and then pay attention and ask questions during the two day training class, there is an excellent probability that you will pass the exam with a high score.

These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95. We also have a number of used study guides available, which we can loan you for a $14.00 cash security deposit. When you return these used study guides, in good condition (not marked up or dog ear'ed), your $14.00 security deposit will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@arrl.net). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Let us know if you are interested in one of our used study guides, and we will contact you regarding how to pick up your copy.

Thanks
Mike Pruden

*Richardson Wireless Klub
*P.O. Box 830232 -Richardson, TX 75083-0232
Contact: Richard Morgan – 972-931-7993
Website: http://k5rwk.org

*News Release**For immediate release*

Students urged to apply for chance to win a free ham radio!

*
*

The Richardson Wireless Klub plans to give away a VHF/UHF radio transceiver.

*
*

Richardson, TX, November 18, 2016 – In an effort to encourage science-minded youth to get their ham radio license, the Richardson Wireless Klub offers a chance to win a */free/* Baofeng BF-F9V2+ Dual Band FM transceiver to any currently enrolled student who passes his/her FCC amateur radio operator's license exam between Nov.15, 2016 and Feb. 28, 2017. Other local ham clubs are encouraged to help pass the word!

The dates were selected to allow a student to use his/her free time over the upcoming holidays to self-study for the amateur radio Technician's license. One transceiver will be awarded to the winner of the drawing.

*
*

*The Klub *also cites several recommended license exam study guides and on-line practice exams.
Other resources mentioned include several youth-related links available through the American Radio Relay League (ARRL), the national voice for amateur radio. For full details and eligibility go to:

http://k5rwk.org/rwk01/attachments/article/6/Student%20Drawing-3.pdf
*
The Richardson Wireless Klub, Inc.* is one of hundreds of Special Service amateur radio clubs across America that provide community communications services. Volunteers coordinate monthly emergency siren tests with the City of Richardson. Local ham radio operators also participate in the Radio Amateur Civil Emergency Service (RACES), and the Amateur Radio Emergency Service (ARES). Ham volunteers**also provide

free communications support for the Richardson Christmas Parade, bike rallies, marathon races, and other events sponsored by North Texas charitable organizations. The club is a non-profit 501c3 corporation and has served the Richardson area for more than fifty years*.* The club holds monthly amateur radio meetings at 6:30 P.M. the second Monday of each month at St. Barnabas Presbyterian Church, 1220 W. Beltline Road, Richardson, TX. Meetings are open to anyone, of any age, who is interested in learning more about the many exciting facets of amateur radio and wireless communications.

General Class Radio License Course and Exam

The Plano Amateur Radio Club is in the planning stages of scheduling a General Class License radio class and exam for sometime in the February - March time frame. We are trying to get a feel for how much interest there would be in this type of class. We envision this class occurring over two consecutive weekends (Saturday and Sunday) in the month of either February or March. The class would be free, but the exam would cost $14.00. If you would be interested in participating in this type of class, please send an email to NN5ZZ@arrl.net mailto:NN5ZZ@arrl.net and please include your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER, and we will contact you, as the details are firmed up.

Thanks for Interest

Mike Pruden

From: mbpruden@...
Topic: 3192 Message: 3192

Save This Date: General License Ham Radio Class

The Plano Amateur Radio Club will be presenting a General level amateur radio class on two consecutive weekends in February. The class will be on Saturday and Sunday: February 11th-12th and February 18th-19th. The class will be held at the Lucas Fire Station training facility. The fire station is located at 165 Country Club Ln, which is just north of Bethany/Lucas Rd, in Lucas. Lucas is located just east of Allen, TX off of US Hwy 75 at the Bethany Rd. Exit. As always the class is free, the test is $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on each date, with the EXAM starting at 3:00 on Sunday February the 19th. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).

To prepare for this class, we urge you to pick up a copy of one of the general class study guides, and read through the material at least once prior to the class. You should not expect to just walk in to the four day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide at least once, and marking any items that you have questions about, and then pay attention and ask questions during the four day training class, there is an excellent probability that you will pass the exam with a high score.

Our course material is based on the "Ham Radio School's General Class Study Guide." These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95. There are also a number of online practice exams that can help you identify those areas where you need a little extra practice.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@arrl.net). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Thanks
Mike Pruden

SkillsUSA is the one of the student organizations for Career and Technology. District 6 will hold their robotics competitions on February 10 at Eastfield College. As organizer of the contests I am in need of judges. I have two returning judges from last year, but need at least 2 more to run the contests successfully. I have attached several documents outlining the two different contests that will be held at the competition. One contest is called Mobile Robotics. Richardson High School is the reigning National champion in this contest and has held the title for two consecutive years. The other contest is called Urban Search and Rescue. Each contest has different objectives and criteria. I would greatly appreciate any help that can be given to allow these students the opportunity to show off their robotics skills.

I have attached several documents and to video links to give a preview of each contest and their requirements.

3197. URGENT - One more judge needed for Robotics Contest Friday, Feb 10

Yahoo group: DAWG-HSMM
Date: 2017-01-24 07:49:04 UTC
From: Douglas Kilgore
Topic: 3197 Message: 3197
Attachments: 1 described; binary payloads are missing from this source WARC

I have volunteered to be a judge for the Robotics Contest to be held all-day at Eastfield College on Friday, Feb. 10. Mr. Steven Kavli, the Electronics instructor at Richardson High School, has informed me that one of the persons originally signed up to be a judge had to drop out. So another judge is URGENTLY needed.

Please step up and volunteer to help with this technology event. Attached to this message are the Robotics: Urban Search and Rescue Challenge Technical Specifications by which the students will be judged. Retired Engineers - this is a natural for you.

Please call me NOW at 214-770-2394 so that I may relay your name to Mr. Kavli.

This all-day event will be fun.

Doug Kilgore KD5OUG

Here is an update:
Ben W4QED, was able to track down the fix for the linksys bug.

Now KD4WOV, W4QED, N4KM, N7WWK, and N4EH can now browse the group and use resources across the tunnels.

W4QED and KD4WOV both are running tunnel servers. If your interested in setting up a tunnel email me.
